Sussex.—No prize should have been given in this class. Humbug might have taken honors in the cocker class, while Sport's topknot was not indicative of purity, though we were told he had a pedigree "as long as your arm." Eyesight is better than pedigree in such a case.

IRISH WATER SPANIELS.—Rover, a hard dog to beat in any company if he had a little more ear, won well from Sport, Dash being too highly valued on this occasion.

FIELD SPANIELS.—His class was made up to suit a few owners, special prizes being awarded. Fido, a genuine good field spaniel, and one we guarantee can put in a rare day's work, got the revolver, and Frank, another good one, took what he has often had before—the whip. RETHERERS.—Rover, a genuine English curly-coated retriever, but very small, got first, the other two being mongrels.

mongreis.—A grand class, in which there might, with advantage, have been more cards distributed. Mounter and Roxey were hounds of the right stamp, and it rook the judge a long time to make up his mind in favor of the former.

ongrels.

favor of the former.

BEAGLES.—Melody, a handsome specimen of the correct size, took first, and the rest were nowhere.

GREYHOUNDS.—In dogs, Ringwood, notwithstanding his bad eye, repeated his victory of last year. His muscular development is truly grand, and nothing could touch him in that respect. Spring, a nine months puppy, took second, and that he is a good one is further evidenced by his taking the special for sporting puppies. The list of awards is sufficient to refer to in the case of the hitches. the bitches.

the bitches.

Mastiffs.—Berney is too long in head, as all our mastiffs are. Breeders must aim at the square head instead of the long nose. To return to Berney, however; his color is good, both on face and body, and, for his age, he is a well-grown and promising dog. June is too white in color ever to look well, and her head is too small. Bruce is a large, gaunt dog, looking as if two weeks in a cookshop would do him good.

St. Berrands.—First to a grand headed smooth dog and second to a rough one, badly shown. The others N. G.

ST. Bernands.—First to a grand headed smooth dog and second to a rough one, badly shown. The others N. G.

Newfoundlands.—A good class. Lee, an Al dog, deservedly got the red card. For size, coat and head we have seldom seen his equal. Nell, his dam, took second, with Nero, V. H. C., following close on her heels.

Colleys.—Bob, good in head and frill, but with a coat showing lack of attention, took first from Sandy, a workman all over. Scotty was the next best. Laddie should not have been noticed, but Lassie with an H. C. was all right. Mr. Stewart's puppies show promise of future excellence, but at present they are too young to compete successfully against old dogs.

Bull. Doos.—Prize withheld. One was a bull terrier wrongly entered, and the other a brindle our, cropped. Boll. Terriers, and out of the brindles and yellows Lion, a well made dog with as good a shaped head as any in the class, got H. C. The owners of the "yaller dorgs" held an indignation meeting and decided that the judge did not not know what a bull terrier was.

Fox Territers.—Dogs.—One of the best classes in the show. Between spot and Tyrant it was a near thing. The former is better in ear and body than Mr. Gibson's deg, and only just won. Tyrant should improve enough to win when next they meet. Baff is weedy, and Tiger too short in head and heavy eared. Trumps is another of the square headed division, as is also Jack. Bitches—Tip, a little beauty, won easily. She lacks bone, and her fine coat betokens her better acquaintance with the parlor than the barn. So well did this birch stand in the setimation of Mr. Watson that he gave her the special for the best fox terrier, and when joined by Dr. Niven in deciding the destination of the second \$20 silver medal, Tip, rightly too, received the award.

Of the remaining classes, two Bedlingtons won in the composite class No. 31. A lot of undershot specimens were sent to the right-habout in rough terriers, first and second going to bow-legged, hard-coated terriers. Black

and tans were very poor; Nettle, decidedly the best, is too full in the eye, and has crooked legs, besides being faulty in coloring on the foreless. From that ir can be judged what the others were. Pugs were well judged. Vanity uncurled his tail when he got into the ring, or he would have stood bigher than he did.

In toys we liked the second best of all, though Tuck is a well-wade reach torion. The triple limital wards and the second best of all, though Tuck is

In toys we liked the second best of all, though Tuck is a well-made rough terrier. The miscellancous was a rightly named class, and the judges got out of the difficulty by giving five equal firsts. We cannot close without giving a word of praise to Mr. A. D. Stewart, the indefatigable honorary Secretary of the show, upon whom almost entirely rested the responsibility of getting it up; as he had the hard work and responsibility, none can claim from him the honors due for the success of the undertaking.

THE ST. LOUIS DOG SHOW.—Persons intending to exhibit at the coming dog show at St. Louis are reminded that the date at which the entries close is Monday next, 20th inst. There is every prospect that the show will be very successful, the entries being already large. The express companies have promised, on prepayment of the usual rates, to return all dogs free of charge.

Nebraska. Field Trials.—Lincoln, Neb., Sept. 6th.—Editor Forest and Itream:—The date of closing entries is Sept. 29th, instead of Aug. 31st, as printed in official programme by mistake. We are receiving entries from New York. Pennsylvania and the Eastern States, and the prospects are most encouraging for splendid trials. the prospects are most encouraging for splendid trials.
J. H. HARLEY, Recording Secretary.

Dog Fleas.—Utica, N. Y., Sept. 4th.—Editor Forest and Stream:—I notice many articles in your paper about "dog fleas," how to prevent them, etc. I will give your readers my experience. Last November, my dog Duke was covered with them, in spite of flea powder. I gave him a bed of yellow cedar shavings under the carpet in his kennel. In a week's time there was not a flea left on him, and has not been from that time to date. He would catch one or two occasionally from other dogs, but they would disappear in twenty-four hours of their own accord. Probably red cedar, or Spanish cedar, or sandal wood would answer the same purpose, but I have not tried either, as yellow cedar is more convenient and answers sufficiently. By publishing this you will doubtless confer favor on many dogs. less confer favor on many dogs.

SMALL POINTER STOCK.—It has been our intention, ever since the New York Dog Show, to call the attention of our readers, and particularly those interested in the small pointer breed, to the wonderfully beautiful and healthy stock owned by Mr. Van Wagenen, of this city. There is nothing superior in this country to the get of champion Dutchess, by Mr. Edmund Orgill's champion Rush. Dutchess is too well known and has been exhibited too often to need any extended eulogy in these columns, and the same may be said of Rush. She is a bitch, with an exceedingly handsome head and of beautiful proportion combined with great power of body; and in the field exhibits a go-aheaditiveness that could hardly be expected to be seen in a dog so finely bred. She is as plucky as she can be, and no bunch of green briars is she afraid to face. Full of energy and life, as anyone knows who has seen her on the bench, seldom lying down, and always ready for a romp. The secret of this is, that when at home on the farm of her master, at Pomona, Rockland County, N. Y., she is allowed absolute liberty to roam over the grounds where she will. Her puppies are never sick and are ever free from mange, the bane of so many kennel establishments. Plain, wholesome food, clear pure water and a bed that is constantly being changed, have produced this result. Mr. Orgill's Rush is acknowledged by winnings to be one of the most representative small pointers in the country, and a rare stud animal. SMALL POINTER STOCK .- It has been our intention, even

F. S. P., of Pottsville, N. Y., has an intelligent poodle which he has taught to scratch while standing up. The dog performs the act at word of command, and the proud and happy owner exhibits him with proudest pride.

#### KENNEL NOTES.

Sales.-Mand S .- Messrs, Hollis and Fellows, Hornell Cocker SALES.—Matel S.—Messes. Hollis and Fellows, Hornell Cocker Kennol Club, Hornellsville, N. Y., sold, Sept. Eth, the black cocker bitch puppy Maud S., wholped Aug. Ist, 1880, to Mr. Robert Walker, Franklin, Delaware County, N. Y. Dash—Mr. W. F. Steel has sold his Irish setter dog Dash to Mr. Geo. W. Folsom, of this city. Balte-cup: Wildair, whelp—Messes. Hollis and Fellows have sold to party unknown black cocker bitch puppy Butter cup-Wildair, whelped May 20th, 1880.

BRED.—Doll-Prince of Orange—Mr. John Davidson's (Monroe, Mich.) imported Llawellyn bitch Doll to bis Imported Laverack Prince of Orange, second prize winner at the Alexandra Palace show, 1879. #### RANGE AND GALLERY.

OTTAWA, Canada, Sept. 11th .- The Canadian Wimbledon for 1880 OTTAWA, Canada, Sept. 11th.—The Canadian Wimbledon for 1880 has had a most successful week of it for the past 6 days. What Creedmoor and Wimbledon are to larger worlds, Ottawa has become to the land of the beaver. Founded in 1888, and holding its early meetings, before the birth of the capital, elsewhere, the association has now finally and firmly planted itself by the banks of the Rideau and close to the arms of its nursing mother—the government. In accordance with the time-honored custom of significant and architecture in the control of the capital substitution of the capital subst duly formal, and at the same time cheery, by a well-served lun-cheen, gives under the appropriate covering of a big marquee, whereat all the notables in town and the leading visitors were present, Col. Gzuwski, the President, being the host. Here, in a very elastic dinner hour, the usual complimentary and congratu-

very elastic dinner hour, the usual complimentary and congratu-latory speeches were made, and Maj-Gen. Luard, the new com-manding officer of the Canadian militia, was for the first time heard by a Canadian audience.

The range itself presents a very pleturesque appearance.
Perched on a high slope, which overlooks a valley some 600 yards broad, are clusters of white tents gleaming under a hot Septem-ber sun—tents of the various officers of the association, tents of

refreshments, living tents of visitors duly labelled; here Nove Scotla; there Ontario, New Brunswick, Quebec and even Manitoba-British Columbia has not put in an appearance, the 2,000 miles of the "fron road" acting presumably as a deterrent. Then there is a charming nest of tents, big and little, devoted to the use of Col. and Mrs. Gzowski, instefully litted up with flower beds in front and guarded by a fence of rupes and pickets. Here plays the band and Mrs. Gzowski receives risitors, though unfortunately the world which visits is still at the seaside and lakeside winding up its summer season

The programme of the meeting has been a very heavy one, and The programme of the meeting has been a very heavy one, and the Snider-Endled ride has been tested to its best. Among the prizes of special interest are those presented by His Excellency the Governor General and Her Royal Highness the Princess Louise, to be competed for with Snider-Enfield rifles, at 200, 5 0 and 600 yards—10 rounds at each range—by the fifty competitors making the highest aggregate scores in the preceding matches, provided they are members of the active nilltin force of Canada, members of the staff, or officers who have retired relating them.

rank. First prize, a special badge and \$250; second prize, a badge and \$150; third prize, a badge and \$160. On the first day the range was not largely attended, first days being proverbially suggestive of immaturity of arrangement, and consequently those present were chiefly men particularly inter-ested in the contest, watching through glasses the twenty targets which constantly rose and fell behind the markers' lines, or ca-gorly discussing some ingenious dodge for sighting or getting at the windage. There was nothing, however, of the reheatsal character in the proceedings. The association has secured as its exacter in the proceedings. The association has secured as its ex-centive officer this year Capt. Costin, a man of great experience in all matters of the range and rille, an experience gained by a long course at Wimbledon, and all ran smoothly. The system seemed to be admirable, and the precautions taken will effectually guard against any repetition here of those ugly instances of false marking which proved so startling this year at the English

A center of envy to some was Lieut.-Col. Gibson, whose 5 deco-A center of envy to some was neutr-tool, tripson, whose 5 decorations showed him to have been present at Wimbledon 3 times, and to have been the happy winner of the Prince of Wales prizates year, a prize which carried with it \$100\$. He also won the Kolapore Cup badge when the Canadian team shot against the English for that trophy. His, though, was only the badge of "78, whereas others present won that of "5, on which appeared the magic letters" Won." Indeed there were several who were evies of honors gained on both sides of the Atlantic, the 1

Without going into details of the matches, the meeting may be summed up by saving: The gathering will not be remembered for good shooting, although that considerably improved latterly, but it will be remembered because of the generally satisfactory na-ture of the arrangements made, and the good feeling which pre-vailed througaout. No complaints have been made, and all the competitors appear to be satisfied that the fullest justice has been competitors appear to be satisfied that the fullest justice has been done them. The weather has been favorable in most respects, but the wind at times proved very trying on account of its varying character, especially in the early part of the week.

The conclusion of the military matches enabled the statistical officer, Gol. Baccon, to make up the squad from which the Wimbledon team of 1881 will be chosen. They are as follows:—

#### ORIGIN OF ROUND-ARM BOWLING

BROOKLYN, N. Y., Ana Phin

Editor Forest and Stream : Editor Forest and Stream:—
Not long since I noticed in an article on cricket, published in
the New York World, a reference to the origin of round-arm
bowling which was insecurate. Having been born and bred in
that part of England (Kent) where the new style of bowling was
first introduced, and also personally acquainted with the originator of it, I thought, perhaps, it might be interesting to your

nator of it, I thought, perhaps, it might be interesting to your readers to have the few and simple facts of the matter from one (perhaps the only one now living) who was, as it were, an eye-witness of the birth of round-arm howling, and intimately acquainted with cricket and the cricketers of Kent of that period. Mr. John Wills, familiarly known by his neighbors as Squire Wills, was born near Canterbury, possibly as carly as 1775, certainly not later than 1709, and, therefore, was about thirty or thirty-five years of age when be originated round-arm bowling at his residence at Sutton, about two miles from Maidstone, Kent, He was then in his prime as a cricketer, paying the his his residence at Sutton, about two miles from Maidstone, Kent. He was then in his prime as a cricketer, playing for his county against all England and other counties, as well as in all the hest local matches. He was, of course, an enthusiastic cricketer, always ready for a game, and upon one occasion, wanting some practice and having no one to bowl to him be got his sister (not be always) as a some against set for he paper may assure against set for he paper may assure against set. practice and having no one to bowl to him be got his sister (not his daughter, as some accounts say, for he never was married) to throw to him, and every cricketer, if he ever saw a female throw a ball, must have noticed that the motion is very similar to the round-arm delivery. No doubt Miss Wills threw some well-pitched and good length balls, which Wills found difficult to play, and this say him to thinking it might be well to try and boost he pitched and good length balls, which Wills found difficult to play, and this set bim to thinking it might be well to try and bowl in the same way. This was in about 1820, and the records of the Marylebone Club show that Mr. Wills attempted to introduce his new style in a match, Kent vs. All-England, on Lords in 1822, but his effort was met with howls of derision and the new style was interdicted by the M. C. C., upon which be left the field and did not play in the match, his place being filled by consent. Although I did not witness this match I perfectly well remember the excitement it created among cricketers. From what I have said it will be seen that I likewisks row were not play in the match, his place being filled by consent. Although I did not witness this match I perfectly well remember the excellementic recated among cricketers. From what I have said it will be seen that Lilly white's story was wrong, as published in his "Cricketer's Companion" for 1811. Wills did play whenever the weather perm itted, but not when the snow was on the ground, and it could not have been his daughter, because he never was married, and the motion did not originate from the girl's effort to keep her hand away from her skirls, as Wills would not bave been satisfied with a young girl's "toss." He wanted force which could only be had out of a throw. Lilly white did not take up round, arm bowling until after the refusal of the All-England eleven at Lords to allow Wills to bowl in the new syste, and when he heard the story of the circumstances no doubt considerable romance had become attached to the story (eight to three black crows). Wills never played in a first-class match after this occurrence, to my knowledge, contenting himself with playing for his own club, Marden the did not live in the parish, against other local clubs. At non-time Marden felt strong enough with Wills and Jordan to challenge the County of Sussex, but 1 do not think the match ever eame off. Nowthitstanding the effort of those in authority to prevent round-arm bowling, it was taken up by howlers, and in soon worked its way into general play. I remember one of our Gillinghare bowlers, Tom White, adopted it immediately; in fact, he was the first I ever saw who bowled round-arm in a match. Wills was a thorough English squire of the period. He received 2109,000 on coming of age, but being of a generous disposition, lending when asked to, but never asking for his own again, and always fiving in an expensive way, his fortune in time slipped through his tingers. He was a thorough sportsman, and kept a fine pack of hounds, which he bred himself, crossing the foxhound with the black and tan terrier and then crossing the foxhound with

shire and onded his days there.

Among other old-time cricketers I recoiled Mr. Budd, very well, always playing in knee-breeches and silk stockings, and Lord Frederick Beaucierk, Nordsh (Tom Norridge we used to call him) Ashley, a carpenter, who, when his employer left Chatham for London, followed him, and, afterward diving in Surrey), played for Surrey. Then there was Jimmy Jourdan, a shipwright, employed in Chatham Dockyard, who I recoilect seeing play a single wicket match at Sutton, his opnonents being his father, son, and George Wilson his son-in-law, who did not succeed in getting him out, although they were will be succeed in getting him out, although they were will be succeed in getting him out, although they were will be succeed in getting him out, although they were will be succeed in getting him out, although they were will be succeed in getting him out, although they were will be succeed in getting him out, although they were will be succeed in getting him out, although they were will be succeed in getting him out, although they were will be succeed in getting him out, although they were will be succeed in getting him out, although they were will be succeed in getting him out. his father, son, and George Wilson his son-in-law, who did not succeed in getting him out, although they were all three good cricketers. Later, the Mynns (there were four brothers), Alfred the youngest and most famous cricketer. Walter used always to long-stop Alfred's fast bowling, always stopping the bull with hands or body, but not taking it us clean as he ought to have done. Then Wenman, Donington, Hillyer and Adams were of this date, the last named, by many of his contemporaries being considered as good a crecketer as any in England. But I remember while the match, Leeds Park vs. M. C. C., was being played at Leeds Park, I was staying at my friend John Roper's house, at Hollingbourne, where Wenman, Hillyer and others were also taying after the day's play, and tby said, "They did not care to play with Adams on the same eleven, as he was of no use, if the match, was "up hill;" if bowling, he could not stand being the match, was "up hill;" if bowling, he could not stand being

hit, and, if a score was needed, he never got one." The match between England and Kent, at Town Malling, in 1839, I remember, as I drove down from London purposely to see the match. No doubt many other scenes would come to mind again, if by any chance I should see any of the participators in them, but most, if too, must soon follow; but, before that time comes, I hope to see a few more good games of cricket.

WILLIAM FILMER.

WINDSOR vs. TOLEDO.—Played at Windsor, Ont., Sept. 6th; won by home club by an innings and 42 runs. Score:—

LONGWOOD 28. STATEN ISLAND.—Played at Boston, Aug. 28th. George Wright writes us: "This was the first game played at Beacon Park, on the grounds of the Boston Athletic Association. Beacon Park, on the grounds or the boston Atheric Association, and considering the grounds are new, the wicket played very well. There was a good crowd present, who took quite an interest in the game. The batting was lively on both sides, and kept the fielders on the go. The game was called at 4:30 P.M., to allow the visitors to take the evening boat for home, which caused the game to be settled by the scores of the first innings.

New York Carvos Ciris.—The fail regatite was held Sept. Bith, off the clury-bonce on State-I feath. The day was fines with a light westerly what. The races set down were as follows; paddiling race for sailing cances; padding race for padding cances; sailing pace for sailing cances; and an upset race. Two prezes in each race. Just plue, Mr. H. O. Stophens, won the first race in 1001, 15s, with the Sandy Hook, Pack Richards, won the first race in 1001, 15s, with the Sandy Hook, The Kill York, K. M. Puthana, won the Scoud race in 1001, 19s.; Qvi Vive, Mr. J. F. West, Second, beating L'Inconnué. The first race was won by Clochette, Mr. Wr. Whitock, the rest not finishing. The fourth race had only two carries and was not brought to any terroduction. Kull, and, I resey Blue next, leating Psyche, Sandy Hook Clochette, Dot, Ellin, Qui Vive, Katoolah and L'Inconnué. In popularity the upset races seem to carry of the palm.

BUNCHED SHOTS .- . 1119, 21st .- I notice what A says about his trial at target with chilled shot out of a choke gun. Myself and friend had the same thing happon with us a year ago, with chilled shot, having tried tive shots with a Parker gun, ten cylinder bore, at free five shots with a Farker guit, encyfinder one, at forty yards, and three of the shots bunched and went through an inch board, making a hole three-quarters of an inch in diameter. The other two made a good pattern. Several other members of the club tried it, and all com-plained of the same thing.

About one hundred persons witnessed a curious spectacle Linsingburg, N. V., recently. It was nothing more nor less than a bird evention. An English sparrow had by some means incurred the displeasure of a pair of red-breasted robins, nested in a tree near flawson Hall. A fight took place between the spurrow and robins on the rear of the toof of the Rawson Hall build-In the sparrow fought pluckily until all at once one of the ing. The sparrow fought pluckly until all at once one of the robins flaw off, while the other kept up the fighting. The robin messenger soon returned with a piece of a cord, that was soon wound around the sparrow's neck, and the end held in the bill of one of the executioners. Tols done, the sparrow was forced off the edge of the roof, and briskly attacked by the other robin. Thus stonated the sparrow was comparatively helpless, and in a short time hung suspended by the neck, dead. After holding their victime and necking him until assured he was beyond resurrection the victorious robins flow to their nest in the tree, singing mer rily, as though glorying over their vanquished foe.

Vicksburg, Miss., Aug. 30th.

USEFUL GUN TRIALS.

VICKSBURG, Miss., Aug. 30th.

Editor Forest and Stream:—

For several years I have been a close reader of Forest and Stream:—

For several years I have been a close reader of Forest and Stream; and have derived no inconsiderable pleasure from a perusal of its columns. I have been more particularly interested in shot guns and the best way of loading them. Over a year ago my brother and I made a trial with our guns for pattern and penetration, shooting nearly 100 shots each with different sizes of shot and different charges of both powder and shot. The result was put in tabular form and published in FOREST AND STREAM. The result showed that the maximum charge of powder for and \$\frac{3}{2}\theta\$. 12 box for the former and 1½ for the latter. We took great pains with our trial, and found the results remarkably uniform when the same charges were used; especially the penetration, which seldom differed as much as 10 per cent. Having sold my old gun and purchased a new one, choked, 10 bore, of Scott's make, weight 91lbs.. I have been tempted to make still further trials in order to see what this gun would do. The shots were fired over the same ground, distance 40 measured yards. But, as our former trial, as published, probably has not been recollected or seen by a large number of your readers, I will again describe the way it was made.

For obtaining penetration we used a trough 3½ by 5 inches on the inside, about 37in, long. The inside of this trough was grooved with a saw at regular spaces of lin. Into each pair of grooves a penetration card was slipped, the trough when full containing 36 cards. This trough was placed on stakes at the end of the range, with the open end toward the shooter. The cards were obtained at the printers, were cut to a uniform size, a little firmer, but almost exactly the same thickness as the United States postal card. We procured quite a quantity, so that all our trials have been made with the same cards. The exposed surface of the first card in the box formed what we c

penetration carls. Now, when a shot was fired, this was numbered, taken down, laid aside for future examination, and another put up. Then the number of pellets entering the first penetration card were noted; then the number of cards penetrated by the majority of the shot were noted, that is, if 7 pellets had passed through the first card, the cards were counted as far as four shot marks could be found. Then the shot marks on the first card, and a few on each side of the limit of penetration were carefully checked off by drawing an O around them. In this way one set of cards could be used for 4 or 5 shots. It was seldom that 2 shots would pass so near the same place as to tear the card between them. As before stated, the number of cards penetrated was remarkably uniform for the same size shot and same measures of powder and shot—counting those pierced by the majority of shot, though often 1 or 2 would full 40 to 30 per cent. behind, while 1 or 2 strong ones would be as great a per cent. in the lead. I cannot account for this difference; probably some of your readers could.

In comparing my old gun, which was a 10 bore Scott, weight loz. Jess than 9lbs., with the new one, I found both almost exactly equal, with 31 and 4drs. of powder, with 140 x. No. 6 shot. But on using 4drs. powder, the old gun gave same penetration, 28 cards, and lost 20 per cent. in pattern, while the new gun tyle. These figures are the average of 4 shots with each gun. I attributed this advantage in the new gun to its being 90x. heavier. I found upon trial that 44drs. powder was the maximum for this gun, and if I were going to shoot a bear I would not put a heavier charge in it than that.

I then shot to compare different grades of powder, 4 shots with each 'grade, 4drs. powder, 4 shots whot each 'grade, 4drs. powder, 140x. No. 6 shot, 6d penetration cards. Now, when a shot was fired, this was numbered, taken down, laid aside for future examina

I then shot to couper of ilerent grades of powder, 4 shots with each 'grade, 4drs. powder, 14oz. No. 6 shot, with following result as the average:

Penetra-tion. 131 251 39 Small pattern. The first brand cost in this market 35 cts. per 1b., the sec

The first brand cost in this market 30 cts. per 10, the second 45 cts., the third 55 cts. This shows quite a difference in the strength of different brands of powder. It also shows by the large pattern that the stronger the powder the greater the tendency in the shot to scatter. My next trial was on the two last brands, same shot and 4½drs. powder, 4 shots with each brand.

Oriental.... Showing but a slight gain for strong powder, but con-

siderable for the other. Thirty and a half is the highest I could get for penetration with No. 6 shot.

My next trial was to determine the relative value of coarse and fine powder, shooting the "Oriental Sea Shooting" of different numbers. No. 3 was the coarsest used, and this I found to be, in an average of four shots with each grade, only one-half card greater penetration than No. 2, though the recoil of No. 3 was tess. There is no question now in my mind as to the advantages of coarse over fine powder. The trials proved No. 3 "Oriental Sea Shooting," or No. 4 "Orange Ducking," as about the proper coarseness for breech-loading shot guns. There are many who claim to be sportsmen who shoot much finer grained powder, getting less penetration and greater recoil, with its accompanying sore shoulder and head-action.

ache.

My next trial was with Dittmar. My brother and I used this powder very successfully winter before last, shooting ducks at long range on the Mississippi River. It gave but little report, smoke or recoil, and at reasonable distances killed the birds dead, fully equal to the best grades of black powder. We were much pleased with it. Last winter a few cans were bought by members of the Marconer Club, of this city, but allabandoued it as unsatisfactory. A few shots were tried at the target, with Last winter a few cans were bought by members of the Marconer Club, of this city, but all abandoned it as unsatisfactory. A few shots were tried at the target, with poor results. Most of that powder to this day has not been used. However, in the hope that the company were making better powder now, a half dozen cans were recently ordered for members of the club. The grades procured were of the 'B' and 'C' brands. The powder performed poorly on glass balls, and did very poorly at the target as compared with black powder. I shot four shots with each brand, ddrs. powder, I shot four shots with each brand, ddrs. powder, I shot. No. 6 shot, and with two No. 9 pink edge wads on powder and one on shot, as directed on the outside of the cans. In three shots I failed to get a single shot in the small pattern or renertation, card. The average penetration of the other live shots was below twenty-one cards, and the average pattern of the eight shots on large papier was exactly 352, only about one-third of that given by black powder. The recoil, report, smoke and fouling of the gun are all considerably less than black powder, but without penetration and pattern equal or nearly so to black powder, the powder is almost worthless to the sportsman who nearly always wishes to shoot strong and close. There may be a way to load this powder to obtain better results, but we have been unable to do it down here.

My next trial was with Orange Ducking No. 4 and Dittmar mixed, using ddrs. powder and 14 oz. No. 6 shot, tesult as follows:—

Penetra- Lar 

All shells were caretuly londen by struck measure (Dixon's), one cardboard wad next powder, one pink edge on that, then one card board on the shot, except the cases containing all Dittmar.

Always on first going to range (the trials taking us

the cases containing in Lorenta.

Always on first going to range (the trials taking us there many times) our guns were clean, generally slightly oiled, and generally the first shot was far below the average in pattern, but about same in penetration. Sometimes the first shot was almost an entire failure; especially was this the case with my left burrel, which in that respect acted strangely with me. Once when clean it gave me a regular bittmar pattern with 47 shot in large pattern and another time only 50. The other barrel, when clean, generally did better than the left, though nearly always below the average. We seldom shot more than 10 or 14 times at one shooting, so I cannot state how the gun would act on becoming very dirty, though for the number of times shot without cleaning I could perceive no diminution in penetration from foulning.

All shooting was done with a rest, that the aim might be true.

It has been claimed that to test a gun on eards for pen-It has been claimed that to test a gun on cards for penetration is not the true way, on account of the shot flattening. In not a single instance did we find this to be the case. There were always plenty of shot in the trough, which had been stopped by the cards, and in many mstances we found shot lodged in the cards. In no case were the shot preceptibly flattened. They appeared to be as round as when loaded in the case.

In order to compare a choked gun with one unchoked, we procured a cylinder Scott, 10 bore, 93 bs weight. The penetration was barely equal, while the pattern, both large and small, was fully thirty per cent, less than the choke guns made.

offee guns made.

As between a 10 and 12 bore gun, the 10 seemed to have the advantage by fully 10 per cent, in penetrative force, ind would utilize one-half drachm more powder, and toz more shot.

All trials were made on dry days, and the cards were

All trials were made on dry days, and the cards were carefully guarded against dampness.

The above is the result of my shooting, boiled down. It has taught me much about guns, and how to load them. I would not own a gun without putting it to some such test. In that way I would develop its weak and strong points, and learn how to humor it. Probably every gun has its whims. A sportsman must shoot at game a long time to become acquainted with them. At the target, with care and judgment, he soon knows them all, and can put them on paper for future reference. Afterwards he can go in woods or marshes or to the trap with satisfaction that he can make his gun do its level best.

best.

1 hope that my tests may be of some benefit to a few, if not many, of the great army of sportsmen who read your paper.

MOUNT HEBRON, Ala., Aug. 30th.

THE BORSTING OF DR. NASH'S GON.

Bollow Forest and Stream:—

The explosion of Dr. P.'srgun, reported by R. W. H., was caused by an overcharge of mud, and not by any fault of the powder or gun, and why he should report such a case, I cannot see. If my gun had been filled with mud when I fired it, I would have expected an explosion, and if I had reported the case at all it would have been to warn others against shooting mud from their guns. As the letter of E. L. H. proves nothing more than that "For several years it (the Dittmar powder) was not uniform in quality"—a point in my favor—I will pay no further notice to it.

Another correspondent, on commenting upon another account with black powder, says: "As far as could be ascertained, the gun was loaded with three drachms of Hazard powder and one ounce of shoe" Pray, how was this fact ascertained? Did your correspondent's friend use graduated measures in loading his gun? and load it in the presence of at least half a dozen gentlemen and sportsmen, as I did mine? (two facts which I can establish) or was the judging of the size of the load done by the pot-hunder's netchol, of seeing how many fingers the rannod would stick above the muzzle of the gun, after the load was in? or did he judge by the amount of noise the gun made when it was fired?

If was only the way in which I supported my gun, that saved me from a more terrible accident than beful me. Half extended my arm to support the gun, as is she usual custom, instead of supporting it, by resting my left hand just under the guard, I firmly believe that it would have torn my left arm entirely away. Still, one of your correspondents thinks the case should not be reported, because the accident of his neighbor with black powder was not. I suppose that if ture were a new drug put upon the market, and I were to come near

would have torn my left arm entirely away. Still, one of your correspondents thinks the case should not be reported, because the accident of his neighbor with black powder was not. I suppose that if there were a new drug put upon the market, and I were to come near losing my life from getting poisoned with it, I should not report the case, because some of your correspondent's neighbors may have been poisoned worse with arsenic and the case not reported. There would be just as much reason in one case as the other.

Through the kindness of Mr, T, J Derryberry, of Gainesville (this State), I have had the privilege of examining the Aug. 5th number of Forest ann Stram, and I notice Mr. Von Lengerke's report upon what he calls the Nash powder, viz., the Dithmar powder that exploded my gun. I have not yet had time to examine this report enough to thoroughly understand it. I see, however, that the test of this powder has shown it to be so far below the strength of the standard Dithmer powder that it is terrible to think what the powder in full strength would do were it to get into one of its crazy fits, as did the powder when it burst my gun. There is something very strange that this powder should show such little strength, and act so middly at all times, except when it was used by me, and then a small charge of the powder cause such a terriffic explosion as to completely, tear to pieces a gun that has so successfully withstood many hundreds of charges that contained a great deal more of black powder, and that, too, when the black powder Company, and ask "what caused the accident?" Is this powder hable to get into crazy fits, or what can be the cause? I am not prepared to believe that the half was in the gun. If so, why could not a much greater quantity of black powder, and that, too, when the black powder Company, and ask "what caused the accident?" Is this powder hable to get into crazy fits, or what can be the cause? I am not prepared to believe that the half was in the gun. I so, why could not a much greater quanti on the gain, was one if such a manner, and indicates so much force that it caused many persons to express themselves as believing that three times the amount of black powder could not have produced the same results. Then, what has caused the trouble? How is it that this weak explosive did, at this particular time, produce such a terrible explosion, if it will at other times, and under different produces the such a terrible explosion.

ferent circumstances, produce different results? If this terent circumstances, produce different results? If this is the case, it is more dangerous than if it would show this gigantic strength at all times, for then we would be upon our guard, but as it is, we are liable to be torn to pieces at a time we least expect it. I am forced to believe that the powder manufactured by the old Ditmar Powder Company is dangerous, and would be unwilling to over use it series.

lieve that the powder manufactured by the old Dittmar Powder Company is dangerous, and would be unwilling to ever use it again.

The Dittmar Powder Manufacturing Company say: "We positively declare that the Nash Powder was not of our manufacture, was not sold by us, and was never in our possession." If this is the case it is wrong for me to censure the present company for the damages which I received from the powder put up by the old company. I am anxious to learn the names of all the members of both the old and new Dittmar Powder Companies, and whether there was a complete chauge of hands when the old company sold out to the new company about a year ago. I have in some way received the impression that both the old and new oniganies have been entirely under the direction of Mr. Carl Dittmar. If this is the case, it seems to me that the Dittmar Powder Company are bringing about a confusion when they say that they are disinterested parties, for at least one of them is, or at one time was, interested in the manufacture of this old powder. In bringing my sad experience with the "old Dittmar powder" to the notice of my brother sportsmen. I did it with the kindest feelings for them, hoping that I might, by reporting the accident, prevent some of them from losing their lives, or having to bear the dreadful suffering which I have had to bear, and be made cripples for ities as I have been. The many letters which I have received from sportsmen throughout the United States express the kindest sympathy for me at a time that it was most needed, and have shown their gratitude for my good intentions. To such I wish, through Foress and STREAM.

Forest and Stream Publishing Company:—

to return many thanks.

S. P. Nash.

Forest and Stream Publishing Company:

I certainly feel myself under very many obligations to you for the kindness you have manifested toward me in the Dittmar powder case. I think that have noticed on the part of the Dittmar Powder Company a desire to bias you in their favor, but to no purpose. You have shown yourselves to be men that form your opinions from the evidence produced, and willing to give each one a fair and impartial hearing. Your fairness will secure for FOREST AND STREAM many friends, for kind fair dealing is not without its reward. S. P. N.

RAIL SHOOTING AT STRATFORD.—The largest flight of RAIL SHOOTH AT STRATFORD.—THE largest inght of rail known for years took place at Stratford, Conn., recently. Up to now I have killed 737. The largest bags on any one tide were 67, 93, 112, 130, 180, The ground shot over is not extensive, but the high tides enabled the pusher to drive them out of the cat-tails. The day I bagged 180 I scored but one miss.

SHERBROOK, P. Q., Sept. 11th.—Our party returned from S<sub>r</sub>ider Lake on the 6th inst. Shot one bear, about 40 pounds weight, one deer, and caught plenty of bass. Too early for trout, and streams very low. Bear, moose, cariboo and deer tracks plentiful in the "burnt ground," about four miles from Upper Spider. Shall try again early in November. Rail from here to Lake Megantic, about seventy miles. Boat twelve miles through the lake and portage of one mile to Spider Lake. Team to carry trass across nortage, Good guides \$2. traps across portage. Good guides \$2.

D. THOMAS.

Bears Abundant.—Rome, N. Y., Sept. 10th.—Bears are reported to be at work at Point Rock, a place twelve miles from Rome, and are doing considerable damage to cornfields in that vicinity. One man driving in the road saw a bear come out of the woods and walk leisurely, along the road about twelve rods in front of the team, and so continued to walk about four or five rods. The bear then turned into the woods, where he waited till the team passed, and then came out and went back on the road. A young cub was killed by two dogs who were hunting on their own hook at Point Rock last week. Their owners hearing a noise went into the woods the next day and there laid the cub, torn to pieces, at the foot of a tree. The tree was well scratched, which Mr. Bear had tried to climb, but was pulled down by the dogs every time he started to go up.

Texas—Indianola, Sept. 2d.—Game unusually scarce in this immediate vicinity this season. Usually at this time of year you can kill all the "papabotles" you care about carrying home, but this year there are compara-

tively none. The best gunners cannot get half a dozen a day, and I never saw the prairie in finer condition for game, and I cannot account for its scarcity. Have had one or two very violent gales of wind, one of which very nearly submerged our little town, and a great portion of the prairie, which may probably be the cause. To make up for the loss of gunning, a great quantity of fish have been caught, especially since the storm.

G. A.

Spoitsmen Leaving by the C. and N. W. R. R.—Chicago, Sept. 13th.—The hunting car City of Worcester, of Worcester, Mass. left Chicago via Chicago and Northwestern Railroad, Thursday noon, 9th inst., with Mr. Jerome Marble and party on board, bound for Ida, Iowa, where they will remain three weeks, chicken shooting, and then go to Wisner, Northeast Nebraska, on the Sioux City and Pacific Railway.

Mr. R. P. Flower, of New York city, with a party of eight friends, left Chicago by the Chicago and Northwestern Railroad in a special car for Northern Minnesota for a hunting trip. Mr. H. S. Turrill and son were among the honored ones, and we trust all the birds will be shot on the wing.

the noncrea ones, and we take the on the wing.

Mr. Wm. Bliss, President of the Boston and Albany Railroad, and George Darling, General Manager of White Star
Line Transit Company, with six friends, left Chicago via
Chicago and Northwestern Railroad, in a special car, on
Friday evening, 9th inst., for Sleepy-eye Lake, on a hunting trin.

Friday evening, with uses, to the left of Agents of Home ing trip.

Edgar H. Kellogg, Superintendent of Agents of Home Life Insurance Company, with A. W. Kellogg, of Naples, Iowa, and H. D. Fisher, of Manashe, Wis, left by the same road on Monday, 13th inst., for chicken shooting. The shooting in the Northwest is splendid this season, and hundreds of sportsmen from the East are enjoying a feast of game.

A BEAST OF A SALMON .- Mr Buckland tells the following story: "A very nervous man went out fishing on Loch Tay, An immense salmon took the fly and ran the reel out in the most violent manner, the rod shaking and bending with the weight of the fish. The angler-we cannot call him sportsman-turned pale with fright. At last, as the line had not been fastened to the spindle of the reel, of course the fish ran it all out and escaped. With that the angler exclaimed: 'Thank heaven! the brute's gone; let's go ashore."

"In Tuckerton Bay, and generally in the thoroughfares along the New Jersey coast, the genuine man-eating shark makes its appearance about the 1st of August. It attains a length in these waters of sixteen feet—at least an old fisherman informs us that he has seen them there of that length—and they would not hesitate to seize and carry off any bather within reach. Lately Mr. David Shuster, of this city, and some friends captured near Atlantic City a shark weighing 330 pounds and measuring nine feet in length. It was taken in Grassy Bay, and required the united strength of seven men to land."

If we had some evidence that these were "man-eaters," such items as this, going the rounds, might be useful in some other way than simply giving evidence of the popular misconception on this subject.

THE MANUFACTURERS OF THE "FOX" GUN, FEELING THAT DEALERS, as a general thing, have not done justice to the merits of this WONDERFUL GUN, are determined to have them placed before sportsmen more generally, that their great merits may become better known and appreciated. It is needless to speak of THE ELEGANT WORKMANSHIP AND WONDERFUL SHOOTING POWERS of these guns. It is a fact well established that they are UNSURPASSED BY ANY IN THE WORLD.

We propose for a limited period to offer a line of these guns at the following EXTREMELY LOW PRICES, after which the original prices will be restored, our object being to introduce the guns into sections of the country where dealers have failed to present them; in the firm belief that where they become known they will be the established favorite, and we shall reap the benefit in future of this great sacrifice.

Such Inducements, Have Never Reforc Rean Offered.

Such Inducements Have Never Before Been Offered.

Sportsmen wishing to purchase one of these beautiful guns must respond at once, as the number offered at these prices is limited. FORMER PRICE. NOW

NEW YORK, THURSDAY, SEPTEMBER 23, 1880

A GENEROUS GIFT.-We owe to the kindness of one of our oldest and most valued subscribers, whose modesty forbids our mentioning his name, but who is well known to the sportsmen of this State, a complete file of Forest AND STREAM. The gentleman to whom we are indebted for this gift has taken the paper from its first number. Complete files of the Forest and Stream are of great value, and we cannot too heartily express our gratitude for this gift. Our friend, speaking of his volumes of the paper, says: "It is too bad to think that they may not be used by me in the future, and I desire to present them to somebody that they may be used. Do not think that I do not prize every number, for, as a sportsman, I do; but as I grow older I have not time to re-read them. Your paper I value, and until I die I shall remit annually, for I welcome its arrival and go through it with care."

A COMPLIMENT TO OUR KENNEL EDITOR.—We learn by the public prints that the kennel editor of Forest and STREAM has been nominated by the Executive Committee of the Nebraska State Sportsmen's Association. While desiring to express his high appreciation of the compliment thus paid him, the kennel editor feels obliged to ecline it. Owing to his absence from New York no mation of this was received until the 20th instant, or his on in the matter would have been earlier defined.

"nanifestly improper for the representative of a ich is to criticise an exhibition of this kind to indge, and the kennel editor of this paper has pressed our views on the subject.

n ECT.—The unprecedented score of 224 out 25, made by Mr. William Gerrish, at Walrings long range practice very close up to the score; it was made in a regular match, and on a day which, from the report, invited and almost provoked such a record. Mr. Gerrish is a young man who has given much time and careful endeavor to long-range work, and being in a coterie of marksmen where abundance of leisure gives ample opportunity for the most exact and careful study of the minutiæ of rifle shooting, it is not wonderful that such a result should have been attained. Nevertheless, with so many chances against his performance Mr. Gerrish is to be congratulated on his feat, and it will doubtless be a long time before he finds himself dispossessed of the "best on record."

### THE "DITTMAR SPORTING POWDER."

WE shall show in this article :-1st. That the so-called "Dittmar Sporting Powder" is a highly dangerous compound when used in fire-

2d. That Mr. Carl Dittmar thoroughly understands this 3d. That for the past five years, from the date of its first manufacture until the present, he has strenuously denied the dangerous nature of the powder.

In doing this we shall advance no theories, but shall confine ourselves strictly to what are, to the best of our knowledge and belief, facts.

The public may expect from Mr. Carl Dittmar, or from those interested with him, a denial of these facts.

No denial can alter facts.

We may, in justice to ourselves, premise something of the circumstances. The "Dittmar Sporting Powder' has been on the market since the winter of 1874-5. The first notice of it in the FOREST AND STREAM will be found in Vol. III., page 26, Feb. 4th, 1875, and a notice in the ROD AND GUN at about the same date. From that time until the present, before and since the consolidation of the two papers, our columns have always been open for full and free reports of the use of the powder by sportsmen. They have also been open, up to a fortnight ago to Mr. Carl Dittmar and those associated with him in the manufacture and sale of the powder. Accidents with the compound have been numerous and serious. It has been our custom to publish, together with commendations of the powder, such reports of accidents as came to us. The Dittmar powder manufacturers have always been accorded a fair chance to explain away these accidents. How well they made use of it is shown by the fact that the product is still in the market.

There has come a change; affairs are altered. Why is

Previous to June 10th, of this year, we had published everal letters from Dr. S. P. Nash, of Philadelphia, Miss. His communications showed him to be a man well acquainted with the use of fire-arms and a practical sportsman. On that date was published a communication from Dr. Nash recording "A Disastrous Experience with Dittmar Powder." The writer alleged that he had loaded a Parker gun with 3½drs. "Dittmar Powder," FFF, that the gun was by this charge shattered, blowing off one of his thumbs, subjecting him to many weeks of suffering and confinement, with a prospect of many more, making him a cripple for life, and probably debarring him from the further practice of his profession of dentistry.

In the issue of June 17th following, the Dittmar Powder Manufacturing Company published a reply, professing to discredit the statements of the Nash letter, and calling

In response the can containing the remainder of the powder was sent to us, and a portion of this powder handed over to the Dittmar Powder Manufacturing

In our issue of July 15th, following, we published letters from Dr. Nash and others, proving conclusively the truth of his previous report, and showing the injury to his hand to have been more serious than he had before anticipated.

The Dittmar Powder Manufacturing Company sent us, and we published, a disclaimer of responsibility, it being substantially a denial that the powder was of their (the present Company's) make, or that it was strong enoughas tested by them-to have produced the alleged accident. Then, having demonstrated that the old powder was of a much weaker grade than that now manfactured and could not be dangerous, they gravely warned the public against buying it.

This explanation by the Company was unsatisfactory and inadequate.

It was the old story-the repudiation by Mr. Carl Dittmar of powder manufactured by himself. The files of the Forest and Stream, of the Rod and Gun, and of the paper since its consolidation, tell this story. Our readers are invited to refer to their files to see that our quotations are correct, are not garbled, and are fair.

Mr. Dittmar professed to be able to make his powder uniform so far back as the summer of 1875.

FOREST AND STREAM, Vol. IV., page 300. Lett Dittmar, dated at Neponset, Mass., June 5th, 1875:-

"I am now making a much slower powder, as many consider it too quick, and I will stick to it and make it always uniform as soon as I find that the sporting community like the latest Issue best. The method of manufacture insures absolute exerness of strength, and if your correspondent. Mr. O. C. Allinson, decides which kind he likes best I can give it to him always the same." (Italies ours.)

Repudiation No. 1 .- Mr. Dittmar having thus put himself on record, we should hardly look for the fol-

lowing when he came to change his business relations:-

FOREST AND STREAM, Vol. V., page 124, Sopt. 30th, 1875. Advertisement of the "Dittmar Powder Manufacturing Company, manufacturers of Carl Dittmar's Patent Sporting Powder, Blastmanufacturers of cart Diffiniter's rate of Sporting Powders, cites, Poposition, 190 Powders, cites, Poposition, Marc Succeeded in overcoming all objections that may have been raised to the kind of Sporting Powder previously manufactured by me. By an entirely new process, and with the assistance of new machinery, I am now able to make the grains as hard as those of black powder, thus with the assistance of the kind they introduced. avoiding the great compressibility of the kind first introduced, and allowing an even loading every time. In addition to the greater density of the new powder, I have also obvioted the great rapidity of ignition. There is now no fear of overloading.

or ignition. There is now no tear of overloading. No necessity for any special directions for use, simply use it like black powder and use the same quantity in bulk.

"The powder can now be used from an ordinary powder flask. The same kind of powder can be used for both shot guos and ritles. The sizes and numbers for the grain are the same as those for black powder. The modulum size is best adapted for general us, the largest size for small bores, and the finest size for large bores.

'Every package of the new powder bears my signature. None genuine without it.

"I manufacture none of the old kind, and all connection with my former agency, the so-called Dittmar Powder Company, is at an end. Please address all orders to me. Any letters unanswered or orders not filled since Sept. Ist will be immediately attended to if parties will please re-write to me. I will exchange, when re-quested, any of my powder bought before that date for the new

My best thanks to the friends of my new powder, who have by their suggestions helped me to make it perfect, so that I now have no doubt of its complete success.

CARL DITTMAR."

He also advertised this in the ROD AND GUN, see issue of Oct. 2d, 1875, page 13 :-

"Every package of the new powder bears my own signature on top of cover; without it, do not consider it genuine. I do not manufacture any more of the old kind, and all my connections with my former agency (the so-called Dittinar Powder Company)

The manufactory, be it understood, was all this time at Neponset, Mass., and Mr. Dittmar was the man who made, or superintended the making of, all the powder. The Dittmar Powder Manufacturing Company then also adopted the tactics afterward repeated by the Dittmar Powder Manufacturing Company (No. 2). attempted to turn the responsibility of the working of the powder away from themselves and upon "the old company:

Ron Ann Gun, May 27th, 1976, Vol. VIII, page 135. Letter from Carl Dittmar, Neponset, Mass., May 20th:

"There are two kinds of my powder in the market; the new kind, which I am manufacturing now for the last eight months, which comes in regular powder flasks with my signature on each. This I warrant, and my former advertisements and all circulars say that I only consider that genuine which bears my signature say that I only consider that genuine which bears my signature on the can. . . . Now, a few days ago, I learned through a communication from Chicago, that a large amount of old powder is still kept by Chicago dealers, of which a great deal is not fl for use, not having gone through the last stage of manufacture. All this powder has been sold without my knowledge and consent by the company I have been connected with last summer. . . . Since manufacturing the new kind no accidents have come to my knowledge, and I sincerely believe that the powder in its present state is safe, even safer than black powder, and I am ready to prove it at any time. If your correspondent, Abe Dacotah, from lowa, will send what he has of that 'worbliess and miserable stuff,' as he calls it fit will load some and send it back and try seme lows, will send what he has no load workness and metalous stuff, as he calls it [I will load some and send it back and try some in the presence of others), and if I fail to prove with that con-demned kind that it is at least equal to any black powder, then I will say Abo Dacotah is right."

The Dittmar Powder Company in Boston sold the powder made at Neponset, and turned over to them by Mr. Dittmar, the manufacturer of it. Does any one suppose that Mr. Dittmar, at this stage of his enterprise, would let powder go from Neponset which was not ready for the market? His letter, like his advertisements, can be made to mean nothing but a repudiation of his own powder.

But the powder made by him, under the new firm name, was all right, for he himself says :-

R. & G., Dec. 4th, 1575, page 157.—1 have succeeded in perfecting my rifle powder, as well as I did lately with my shot gan powder. . . . 1 warrant its safety, cleanliness, strength, little recoil, smoke, report, and its regularity in shooting, both for rife and shot gun Try and see. Use it like black powder; no need of any more in

G., March 11th, 1876, page 383.—Dittmar powder. ranted for . . . its absolute regularity in shooting, both for rifle and shot run.

Mr. Dittmar had no opportunity to repudiate this pow der, for the formation of his third (?) company was too remote to allow of this. The "Dittmar Powder Manufacturing Company" (No. 1), followed the "Dittmar Powder Company" (No. 1.) into dissolution, and for a time the manufacture of the powder was nominally suspended. In the FOREST AND STREAM, of March 21st, 1878, appeared an advertisement of the Dittmar Powder Company (No. 2), which informed the public that the powder was at that time uniform and of Mr. Dittmar's own manufachure :-

"By new process of waterproofing this powder is now made absolutely uniform. Mr. Carl Dittmar will give his whole time and skill to its manufacture."

Further he tells us that the powder is tested :-

P. & S., Nov. 7th, 1878, Vol. XI., Page 290.—Letter from Carl Ditt mar, dated Binghamton, N. Y., the location of the manufactory -" Every batch of my powder is tested thoroughly, before it is sent out."

Moreover, he alleges it to be safe :-

F. & S., Nov. 21st, 1575, Vol. XI., Page 331.—Letter from Carl Dittmar: "In answer, . . . I have to say, that my powder is absolutely safe when used according to intructions."

The advertisement of the Dittmar Powder Company (No. 2), also asserts it to be "efficient, uniform and safe.

Two days after his letter of Nov. 2d, 1878, it appears the test by the pressure gauge was adopted, for he tells

FOREST AND STREAM, March 6th, 1879, Vol. XII., page 93. Let ter from Carl Dittmar, dated at Binghamton, N.

Since November 5th last, all I have manufactured has been tested with the Government pressure gauge, and is perfectly re inblo and safe with heavy charges. As I expect our own pressure gauge in a few days from the Springfield armory, I shall not let a single pound of powder go out without having it tested thoroughly for strain.

The kind I made last year up to Nov. 5th is also perfectly safe if used according to directions and with no heavier charges than recommended in the circulars."

Again Dittmar indorses the powder made subse quently to Nov. 5th, 1878 :-

Forest and Stream, June 19th, 1879, Vol. XII., page 383, commenting on an accident with his powder, Carl Dittmar says:—

"I think the powder must have been purchased before the 5th of November last year, from which time I made the new and lower kind. Of this kind, which is marked as tested with heavy slower kind. loads, there has not been a single complaint yet. The powder r terred to in "Penn's" letter was of the kind Capt. Bogardus re-commended and has used in all his exhibitions. I myself should not like to use it in heavy charges, but I think it is impossible that 3! drs. could do any harm. I think there must have been an accidental overcharge, the measure being wrong, or something of the kind. If he will send me a sample in a glass bottle I will test it in the Government pressure gauge and give honestly the test it in the Government pressure gauge and give honestl result; if it is too quick for safety I will admit the fact. powder now made is all tested by the pressure gauge. A case o overloading caunot happen with the new powder, and I do no give any extra instruction. The powder will work no matter how this hand, if ige. A case of it is loaded.

Just here we may explain that the date, Nov. 5th, 1878, shows that the test by Government pressure gauge was employed nine months before the Dittmar Powder Manufacturing Company (No. 2), succeeded the Dittmar Powder Company (No. 2) It was the practice to take samples of the powder to the Springfield Armory and test them there. And further, that this thing may be clearly understood, the gauge made for the Dittman manufactory was exactly like the Government pressure gauge, and was shipped to Binghamton from the Spring field Armory March 13th, 1879, five months before the present Dittmar Powder Manufacturing Company (No. 2) succeeded the Dittmar Powder Company (No. 2). are thus particular about this to show that the old Company possessed the same instruments for testing the powder that the present Company have.

Having come safely through this tortuous course, we must not be surprised by his

Repudiation No. 2, which came in the form of a letter the business manager of the Dittmar Powder Manufacturing Company (No. 2).

"Mr. Von Lengerke sends me the inclosed letter, which I have thought proper to send you for your perusal, which done, please

return.

"He is now engaged in testing shells loaded by Squires, and ex presses the opinion that S. is engaged in gathering up all the old presses the opinion that 5. is engaged in particles. condemned powder and sealing and loading it.
"A. J. PARKER."

In due time we received and published the report of their employé, Mr. J. Von Lengerke, who was "glad to say that the powder had no exceptive strength, and the accident reported cannot have been the fault of the powder." The report of their employé was ac-companied by a letter which contained the extraordinary sentences quoted below :-

FOREST AND STREAM, Aug. 5th, 1880, Vol. XV., page 10. Letter from Dittmar Powder Manufacturing Company (No. 2).

"We positively declare that the Nash powder was not of our manufacture, and was not sold by us, and was never in our pos-session. So far as that is concerned, we are disinterested parties, except insumed as it bears the name of Dittmar powder, and we think that our tests have abundantly proved that even that was not dangerous, but fell below the powder which we put forward as our standard

"Mr. Nash's suggestion that the can of powder may have been tampered with is something with which we have nothing to do. If it was, it was not our powder that was tempored with

We shall, following your suggestion, advertise more filly to be world that we have never sold, nor will we ever sell without the world that we has due notice to the public, any powder whatever, either unsealed unstamped, or without all proper directions for its use; and we bereby caution the public against buying any unscaled s Dittmar powder.'

The powder, thus it is seen, has been made and sold, within the short space of four years, under no less than five firm titles, namely—Carl Dittmar, Dittmar Powder Company, Dittmar Powder Manufacturing Company, Dittmar Powder Company (No. 2), and Dittmar Powder Manufacturing Company (No. 2).

Now, remembering that all the "Dittmar Sporting Powder" ever manufactured was made by Mr. Dittmar personally," or under his supervision, or by his wife per sonally, or under her supervision, or, at least, was made and sold by firms of which he was the principal, or of which he and his wife were the principals-how shall we suitably characterize this action of a man engaged in the manufacture of a commercial product, time and time again warning the public against his own product?

What warrant had we that bye and bye, Mr. Dittmar having formed a Dittmar Powder Company (No. 3), they would not in turn repudiate the powder of the present Dittmar Powder Manufacturing Company, and warn against its use, because the cans had no lab tom, and so on to thirteenthly? Or could the purchaser of the powder now sold by the "Dittmar Powder Manufacturing Company" (No. 2) afford to keep it six months to find out whether it was the "condemned" and dangerous kind or not?

Clearly, while the "old condemned powder" bosh might satisfy the manufacturers, it was no explanation to offer to a man who had had his thumb blown off and his business ruined, nor to other men who, by the use of this powder, were running the risk of a like calamity.

We refused to publish the letter of Aug. 5th without a protest that it dodged the question at issue. We set to work to determine the true character of the powder. Our duty to ourselves demanded this investigation. Much more did our responsibility to our readers imperatively call for it.

We accordingly began the investigation of the nature of the powder, and said so in our issue of Aug. 5th. Cognizant of the fact that we were studying the powder, and after their agent had been informed that we were about to publish the results of our investigation, the Dittmar Powder Manufacturing Company, upon the trumped up pretext that our refusal to publish what we thought to be a libelous letter proffered by them was unfair, ju diciously withdrew their advertisement Aug. 31st.

Writing this letter was a characteristic attempt to turn the affair into a personal controversy, in the heat of which the real question of the safety of the "Dittmar Sporting Powder" should be lost sight of.

So much for the circumstances, which, fortunately for ourselves, fortunately for our readers and fortunately for the public, led us to determine the true character of the "Dittmar Sporting Powder."

Right here, and once for all, we may say that while the Forest and Stream has in times past been duped by Mr. Dittmar's seeming honesty of purpose into serving his end, yet the present management has never been committed to an editorial indorsement of the powder. That we did not realize the true nature of the compound is our only excuse for having even passively permitted our columns to be used in any way by him.

To clearly comprehend the different natures of different explosive agents, some knowledge of chemistry is requisite. When Mr. Dittmar is asked as to the composition of his powder, his favorite way of responding to or evading the question is to retort, "You are not a chemist therefore, I cannot explain it to you." It will not be neces sary hereafter for the readers of this journal to go to Mr. Dittmar for their knowledge of the composition of his powder, nor for a sufficient understanding of the principles of chemistry to fully comprehend the true nature of that compound. They will find all that in this paper

\* As to the past, the quotations sufficiently prove this. In the present concern Mr. Dittmar and his wife own, or did own, a 55-100 interest. An employe of the Dittmar Powder Manufactur-ing Company told us, when we went there for some powder, the other day, that the stock was small, because Mr. Dittmar was in other day, that the stock was small, because Mr. Dittmar was in the Catskill Mountains, and in his absence no powder could be manufactured. We had reason to believe, at that time, that Mr. Dittmar was in Europe, but this lack of geographical knowledge on the part of the employe does not alter what we are trying to show, namely, that Mr. Carl Dittmar is now, as he has always been, the responsible party in the manufacture and sale of "Dittmar Sporting Powder."

The present Olttmar Powder Manufacturing Company about, Aug. 4th, 1879. Their manufactory is at

United States Circuit Court, Southern District of New York. Nov. 13th, 1879, Carl Dittmar, being duly sworn, doth depose and say: "Everything at Bingbamton is attended to by myself and

This is not the place for a treatise on chemistry. None is necessary. We shall, however, attempt to put this, whole thing so clearly and as concisely as possible, that whether chemist or not, no man who reads it need be bailled longer by Mr. Dittmar's chemistry bluff.

#### THE CHEMISTRY OF EXPLOSIVES.

Various explosive agents are associated in our minds with different degrees of explosive power and effect. Thus, black gunpowder is a material with which we are all familiar; we know it to possess great explosive power, yet with certain precautions we do not hesitate to handle and employ it.

Nitro-glycerine, on the contrary, is known in a vague way at least to be in its explosion vastly different from gunpowder. Its might is so tremendous, its effects so territic, that the very name of the compound is significant of uncontrollable force; we hesitate to handle it, and its presence inspires us with dread

At the beginning of our study of explosives then the question meets us, Are all explosive compounds of the same inherent nature? Do they differ only in their manifestations of power according as that exhibition of power is made by the conditions of the explosion more or less complete, or may one form of explosion be radically different in its nature from another? Evidently we must determine this before going further.

The teachings of chemistry on this point are beautifully simple, clear and conclusive. To make them plain we need but to outline some of the fundamental and familiar principles of that science. We begin at the beginning, with the molecule.

Molecule. - A molecule is the smallest mass into which any substance, solid, liquid or gas, can be divided by physical or mechanical processes. The text-books tell us that the limit of the measurement of molecules is reached at about the one-five hundred millionth of an inch. A molecule is infinitessimally small, and it is important that we have a clear appreciation of this, for small as it is, in the molecule we shall find the key to this whole inquiry.

Molecular energy.-Molecules have constant motion. most free in gas, less free in a liquid, least in a solid. It has been estimated that the mean velocity of the molecular motion of hydrogen gas, under a certain given pressure, is 6,097 feet per second. Molecules have weight; they bave motion; motion and weight give energy, The movement, and therefore the energy, of molecules vary as the temperature of the mass. Therefore, to increase the temperature, is to increase the molecular en-

Pressure.—In gases the movement of the molecules is in straight lines, and the movement of their aggregation is, therefore, in every direction to the surface of the The surfaces of the containing body are constantly bombarded by these molecules. The aggregation of this bombardment—millions of molecules moving at the rate of thousands of feet per second-is what we call pressure.

Pressure, it will be readily understood, varies with the molecular energy; this, in turn, varies with the heat. To increase the heat, then, is to increase pressure. Increased pressure demands increased resistance by the containing body, or else yielding, and an increased volume. Also, to convert a solid mass into a gas, is to increase, or to release, its molecular energy.

Atoms.-Mechanical subdivision stops with the molecule. Chemistry goes beyond this, and conceives each molecule to contain atoms. It does more than this: it actually breaks up the molecules, and, combining the atoms of one with the atoms of others, forms new molecules, which are wholly different from the old.

Chemical reaction.—Such a change is termed a chemical reaction. It differs from a mechanical process. instance, water is a liquid mass made up of molecules. Each molecule of water, it has been determined, is made up of three atoms, two of hydrogen and one of oxygen. Now, a drop of water may be, by mechanical processes, divided and subdivided into the smallest mass attainable by the most delicate known means, and yet the ultimate molecules possible to obtain, would consist of two atoms of hydrogen and one atom of oxygen. But by a chemical reaction those same molecules may be changed into another substance, the hydrogen atoms uniting to form molecules of hydrogen gas, and the oxygen atoms uniting to form molecules of oxygen gas. For a chemical reac tion (or the union of the atoms of different molecules) it is requisite that the molecules come in contact; there must then be molecular energy; where a sufficient degree of this is lacking it may be stimulated by heat.

Combustion.-The atmosphere in which we live contains a certain proportion of oxygen. The ordinary process of combustion is simply this: By the application heat the molecular energy of the combustible substance is stimulated to such a degree that the molecules are released or separated from the mass and are brought into contact with the molecules of the air, when the oxygen atoms of each, by a chemical reaction, unite to form oxy-

But there are certain substances which have a large upply of oxygen stored up in them. Their molecules then, may furnish oxygen to the combustible just as readily as the molecules of the atmosphere do, and in a more concentrated form. Hence, by placing the oxygen containing substances with the combustibles we may shut them in from the air, and by sufficiently stimulating their molecular energy, by the application of heat, produce combustion.

SEPTEMBER 23, 1880.1

Gunpowder.—Niter or saltpeter is a substance rich in oxygen. Charcoal or carbon is a combustible. Now, if niter be brought into contact with charcoal and some sulphur be added to facilitate ignition, we have all the conditions necessary to combustion. This is the common black gunpowder. If, now, a certain quantity of this compound be confined, as in a gun, away from the air, and ignited, the result will be a combustion. The oxygen which is stored in the niter is so concentrated that it allows a very rapid combustion. This is termed an explosion.

Nitro-glycerine.—In place of the charcoal, another combustible substance, glycerine, may be employed, and instead of the niter, nitric-acid may be used to secure the requisite supply of oxygen. This is the compound known as nitro-glycerine. If a mass of nitro-glycerine be confined and ignited the result will also be an explosion.

Now, how shall we explain the tremendous difference of the two explosives? In each compound we have simply combined the conditions necessary to combustion, and the result in each case is simply the production, by a chemical reaction, of a large volume of gas and the consequent liberation of molecular energy in the gas. What is the difference?

Simply this: Whereas, in the gunpowder the union is of the atoms of different molecules; in the nitro-glycerine it is of atoms within the same molecule. Before the atoms of the gunpowder oxygen molecules and niter molecules can unite, they must each pass out from their molecules; in nitro-glycerine they are already in the same molecule.

Explosion of gunpowder.-Let us go back. Gunpowder is manufactured by mechanical processes. The charcoal, sulphur and niter are each ground into dust and then intimately mixed. But by no mechanical treatment can the molecules of the sulphur, niter and charcoal be changed into molecules of any other substance, and hence in the mass of gunpowder, which consists of grains, each individual grain is made up of countless molecules of sulphur, niter and carbon. The generation of gases can be produced only by the union of the atoms of one molecule with the atoms of other molecules, and the process of combustion beginning at one side of one molecule of one grain must extend first through this molecule to the next, and so on to the center of the grain, and through to the other side, then to and through the next grain, and so on through all the grains to the conter of the mass and then through to the other side. The process is one requiring a certain definite interval of time. The generation of gas being progressive the pressure must also be cumulative.

Explosion of Nitro-glycerine.—Beginning with the manufacture, we find a radical difference between the mixture of the ingredients of guppowder and the union of the ingredients of nitro-glycerine. The first was a mechanical mixture; the second is a chemical reaction. The atoms of the nitri-acid molecule unite with the atoms of the glycerine molecules and form new molecules, which are different substances from the old. Hence, nitro-glycerine is not nitric-acid and glycerine; it is nitro-glycerine.

Again, it has been demonstrated by chemical analysis that each molecule of this new substance, nitro-glycerine, contains, yrapped up within itself, the different atoms, which, under the conditions of explosives, may combine with each other to form new molecules of gas. Hence, in an explosion of nitro-glycerine, it is not necessary for the atoms of one molecule to be set free from that molecule, and to pass out from it to the atoms of other molecules. The element of time is thus eliminated, and the process is instantaneous. The conditions which will explode one molecule of nitro-glycerine are sufficient to explode the millions of millions of molecules of the entire mass. The explosion of every part of the entire mass is then simultaneous. This is termed detonation.

The different exhibitions of force by slow and quick explosions are too familiar to need rehearsal here. Our study of the subject thus far enables us to understand the principles underlying these different effects.

The molecules of gas move in straight lines in all directions. Thus, when a solid or liquid substance is converted into gas, the pressure of the gas must be exerted in every direction at once. If an interval of time be allowed, this pressure concentrates itself in the line of least resistance. If no interval of time be allowed, it cannot so concentrate itself, but must be everywhere alike on every part of the surface of the containing body. The difference between the two explosions is just the difference between a push and a blow. The molecule of gas, in the one case, is like a leaden bullet thrown from the hand against a board and rebounding; in the other case it becomes the same leaden bullet driven with frightful velocity from the muzzle of a gun through the board.

In the discharge of a fire-arm, the pressure of the volume of gas generated by the slow form of explosion increases in force and exerts itself in every direction against the surfaces of the gun-chamber and the ball, until it attains a degree of strength sufficient to overcome the resistance of the ball. At that point the ball yields, and the pressure at once concentrates itself in the line of this yielding.

On the other hand, the generation of gas, in the explosion of a charge of nitro-glycerine in a gun-chamber, would be instantaneous throughout the whole charge. It would exert itself in every direction at once, and there would be no yielding of the least resistant body to admit of the pressure concentrating itself in the line of least resistance. For to yield requires motion; motion requires time; but there is no time; consequently, no motion. The ball, it is true, would be blown out of the gun, but not before every side of the chamber alike had received the same blow, by which also would the gun be shuttered.

ET.

#### THE ORDERS OF EXPLOSIVES.

An explosive compound we have seen to be a mixture of substances capable of rapid conversion into gases by the operation of heat.

An explosion may be defined as "a chemical reaction causing the sudden or extremely rapid formation of a very great volume of highly expanded gas."

The effect of the explosion, we have also learned, depends upon the rapidity with which it is generated. Measured by this effect, explosives are now divided into two general orders, the first and the second—quick and slow, high and low. It will be more convenient for us to first consider

EXPLOSIVES OF THE SECOND ORDER.

- 1. In an explosive of the second order the explosion, or freeing of the gases, is brought about by simple ignition.
- The process is gradual, from one side of the molecule through to the other, from one side of the grain through to the other, and from one side of the mass to the other.
- 3. This requires time.
- Up to a certain point the explosive force grows more powerful as the explosion progresses; it is cumulative.
   It concentrates itself in the line of the least resist.
- 5. It concentrates itself in the line of the least resistance, and is never greater upon any other part of the containing body than upon the part which yields; i. e., "it can never be greater than the resistance of the least resistant part."
- Confined in a gun this class of explosives are projectile, or ballistic; they are therefore adapted for use in ordnance and fire-arms.
- 7. The distinctive type of this class is gunpowder.

  EXPLOSIVES OF THE FIRST ORDER,
- 1. In an explosive of the first order the explosion, or freeing of the gases, is by detonation.
- 2. It is en masse.
- 3. It is instantaneous. A ton explodes just as quickly as an ounce.
  - 4. It is not cumulative.
- 5. The force is exerted upon every part of the containing body alike.
- It is shattering; and therefore explosives of the first order cannot be used in guns. The smallest charge would burst the gun,
- 7. The distinctive type of this class is nitro-glycerine.

  III.

# DETONATION.

Before going further we must consider more fully the mechanical nature of the form of explosion called detonation.

Detonation is the instantaneous conversion of the whole mass of a body into gas. Those who have studied it the most thoroughly, in theory and by experiment, as exhibited by the typical detonating explosive, nitroglycerine and its compounds, have determined that:—

- 1. Three agencies combine to produce the action, namely, heat, pressure and motion, the last being either shock, jar or vibration. No one of these alone will produce detonation.
- 2. Heat alone will not produce detonation. A match will ignite unconfined nitro-glycerine, but the liquid ceases to burn when the heat of the match is removed. Nitro-glycerine may be burned with a wick the same as whale oil; a rag saturated with it burns slowly. Thrown upon the fire or upon a redhot stove, it burns but does not explode.
- 3. Simple pressure alone will not produce detonation. This is shown by the fact that the liquid may be stored in such a shape that the pressure of the mass upon the layers next to the bottom must be immense, yet no explosion is caused thereby.
- 4. Motion (vibration or jar) does not produce detonation. When the nitro-glycerine is spread out on an an-

\*For an elucidation of the foregoing subject the reader is referred to Prof. J. P. Cooke's "The New Chemistry" (Appleton & Co. \$22). This volume contains the most admirable epitome of the secience of chemistry that we have ever seen. We have not hesitated to make use of Prof. Cooke's illustrations and in some cases of h s language, and we here make a general acknowledgement to him.

vil and struck with a hammer, although the whole surface is jarred thereby, only that portion of it which is between the face of the hammer and the face of the anvil will explode.

5. Again, the pressure of a greater degree of any one of these three agencies admits of a less proportion of the other two. Thus the greater the degree of heat the less may be the pressure and jar; the greater the pressure the less the heat and jar; the greater the jar the less the heat and pressure.

Now let us consider the conditions of the detonation of nitro-glycerine and its compounds when confined, for instance, in a bore-hole. Just here we must keep in mind that confinement is not pressure, although it may be an aid to secure pressure.

6. If a mass of nitro-glycerine be closely confined in a bore-hole, and be simply ignited at one end, the expansion of the volume of gases formed by the combustion of a part of the charge, creates pressure upon the remainder of the mass, until, at a certain point, this pressure becomes powerful enough, in conjunction with the attendant heat and jar, to detonate the rest of the charge. This is a partial detonation of the charge. The action is best shown by an experiment with dynamite, which is a combination of nitro-glycerine with a solid substance: A charge of dynamite closely confined in a gas-pipe and simply ignited at one end, will burn through a certain length of the charge, and the rest will, by the pressure, heat and jar, be detonated. The interior of the tube thus burst will be marked so plainly by the two processes that it is possible to determine just where simple combustion ended and detonation began. It will be readily understood that the greater the pressure by the confining body the less ignition is necessary, and vice versa,

7. Again, when the confinement, and consequently the pressure, is less, the detonation may be produced by giving the charge a greater shock. This may be done by means of a strong percussion cap. In the present practice with high explosives the method of confinement and ignition is not employed; the approved mode is that of Nobel's invention, the use of a strong cap.

A clear understanding of these different conditions of detonation will enable us to intelligently study a third order of explosive compounds.

#### IV.

### EXPLOSIVES OF A TWO-FOLD CONSTITUTION.

These partake of the nature of low explosives and also of the nature of high explosives; that is to say, according to the adjustment of the conditions of their explosion, they may be exploded either by ignition, gradually; or by detonation, en musse; or partially by ignition and partially by detonation. To this class belong the nirrocellulose combinations; i. e., the combinations of nitricacid and cellulose. Cellulose is the vegetable fiber of wood, cotton, etc.—the skeleton of vegetation.

The prominent type of this class of explosives is

#### GUN-COTTON.

- 1. Gun-cotton is the fiber of cotton treated with nitricacid.
- 2. It is, as an explosive agent, analagous to gunpowder in that it is a porous solid; is when dry highly inflammable, and when ignited without confinement it burns like gunpowder by ignition.
- 3. It is, as an explosive, analagous to nitro-glycerine. It is made in essentially the same way, by a chemical reaction, the principal difference being that the nitro-cellulose, a porous solid, is not so sensitive as the nitroglycerine, a solid.
  - 4. This is a difference of degree only, not of kind.
- 5. It is a difference which may be easily removed by mechanical means, i. c., by bringing the molecules of the mass into closer contact.
  - 6. This may be done by pressure.
- 7. Under pressure gun cotton is analogous to nitroglycerine in its explosion. It detonates.
- 8. The explosion of gun-cotton ignited unconfined is analogous to that of gunpowder; confined, to that of nitro-glycerine.

It took along time for men to learn this. The history of the use of the material is curious; for us it is also instructive.

First manufactured in 1838, it was, as its name implies. thought to be a suitable material to supply the place of black powder as a projectile explosive. It was employed in ordnance and in fire-arms. Sometimes it went all right. Sometimes it went all wrong; exploded with terriffic power, burst the cannon, shattered the fire-arms. blew men's thumbs off. The manufacturers claimed that they could make it uniform. For all that we know to the contrary they sent for some of the cotton, contended that it must have been the manufacture of the old company, that it did not have the seal of the new company on the tops of the cans; and then-in due form, as in such cases made and provided-proclaimed in the papers that their pressure gauge at Bigtown proved conclusively not only that this cotton was weaker than that of their own make, but also that the fault must have been wholly with the thumbs. But, at all events, the gun cotton burst the guns and blew off the thumbs.

After Nobel's invention of the method of detonating

nitro-glycerine with a strong cap, it occurred to Brown an Englishman, that gun-cotton, being a nitrated product, like nitro-glycerine, might also be detonated. tested it. It detonated The gun-cotton accidents were explained to the full satisfaction of the scientific world and, let us hope, also to that of the manufacturers. Gun-cotton is now employed for blasting purposes, and as detonating charges in bomb-shells and torpedoes After the most elaborate series of experiments by the Austrian government, its use as a projectile agent was abandoned as unsafe. Gun-cotton is, therefore, no longer used as a projectile force in gunnery,
THE DETONATION OF GUN-COTTON.

1. The conditions of the detonation of gun cotton are analagous to the conditions of the detonation of nitroglycerine. The three agencies of heat, pressure and motion must be present; and in proportion as any one of these is stronger the others may be weaker.

2. If the gun-cotton in a gun, for example, be not only confined, but also pressed down, so that it is compact, it will now be understood from what has already been said, a comparatively small amount of heat and jar, or shock, need be present.

3. If the gun-cotton be closely confined, but without pressure, and ignited at one end, the volume of the gas generated by the combustion of a part of the mass will supply the pressure, and, with the accompanying heat and motion, detonate the rest of the charge.

One of these two things is just what happened when the cannon and guns burst, and the thumbs were blown off,

Now, recapitulating and tabulating, for it is essential that this be clear in our minds, we have found that gun-cotton, an explosive, combining in itself the natures of both low and high explosives, may at any time in its explosion manifest the nature of one or of the other according as the adjustment of the conditions under which it explodes favor such manifestations :

GUN-COTTON

NITRO-GLYCERINE. Second Order. First Order High. Quick, Detonation. Low. Ignition Grain to Grain. En masse Cumulative. Not Cumplative Projectile Shattering." NOT EMPLOYED IN GUNNERY.

"DITTMAR SPORTING POWDER."

where does "Dittmar Sporting Powder," so-Now. called, belong?

As an explosive agent it can properly be classed only in the order which we have described as possessing a two fold constitution.

1. In so far as it is a nitro-cellulose product, it is strictly analagous in composition to gun-cotton. It is cellulose treated with nitric acid, or nitric and sulphuric acids. A chemist's analysis fails to discover any essential difference in the explosive properties of cotton-cellulose and wood-cellulose. The wood-cellulose-for palpable rea sons-is cheaper than the cotton-cellulose. That is a difference which appeals only to the manufacturer's pocket.

Mr. Dittmar nitrates cellulose. He does more than this. He mixes his cellulose with starch and sugar and then nitrates the mixture. Therefore, depending altogether upon the care with which this mixture of the ingredients—cellulose, sugar and starch—is made, any given sample of "Dittmar Sporting Powder" may contain more or less of nitro-cellulose, nitro-starch and nitrosugar.

Why does he add these higher explosives? We shall see that he does consider nitro-starch and nitro-sugar higher explosives than nitro-cellulose.

2, Like gun-cotton, "Dittmar Sporting" Powder" is, as an explosive agent, analogous to gunpowder, in that it is a porous solid. Its mechanical manufacture-graining-makes it still more analogous in form. When dry and ignited in the open air, or without much confine-, it burns like gunpowder, by ignition.

3. Like gun-cotton, also, it is an explosive agent, analagous to nitro-glycerine in its manufacture. It is made in the same way, by a chemical reaction, the essential difference being that the nitro-cellulose, a solid, does not by its molecular construction form so sensitive a combina tion as does the nitro-glycerine, a liquid.

4. This is a difference of degree only, not of kind.

5. This difference may be easily removed by mechanical means, i. e., by bringing the molecules of the mass into closer contact and increasing their energy.

This may be done by pressure, and then

7. Under sufficient pressure "Dittmar Sporting Powder" is, in its explosion, analagous to nitro-glycerine.

8. Unconfined, it explodes by ignition; confined suffi ciently, by detonation.

DITTMAR SPORTING POWDER. QUNPOWDER.

NITRO-GLYCERINE. First Order. Second Order. Low. High. Quick. Detonation Ignition. Grain to Grain En masse. Cumulative. Not Cumulative. Projectile. Shattering

NOT TO BE USED IN FIRE-ARMS.

That explains everything. That it does explain every thing, and that without it many things are inexplicable, is a proof of its correctness.

We have now come to a point where we are ready to consider the action of the powder in the gun. This is just the point where Mr. Dittmar has always insisted that we must begin. Remembering that this action is precisely the action of gun-cotton, complete ignition, almost complete ignition and slight detonation, and so on to complete detonation, we think the intelligent reader will be able to account for almost any action of his "Dittmar Sporting Powder," even the "crazy fits."

Our task would now be completed were it not a moral certainty that, did we stop here, Mr. Carl Dittmar, or some of those interested with him, would flatly deny or evade the correctness of this classification of his powder. He has done this three times before

We do not intend that he shall do it now,

We therefore prove it.

The proof is five-fold. First, the patent specification; second, the account of the process of manufacture caused to be printed by Mr. Dittmar; third, the report of a competent chemist; fourth, by inference from the "directions;" fifth, Mr. Dittmar's own sworn statements. Hereafter we shall add to these five a sixth. namely, our own corroborative tests.

#### THE FIVE PROOFS.

First Proof-The Patent Specifications. UNITED STATES PATENT OFFICE.

CARL DITTMAR, OF BOSTON, MASSACHUSETTS. Improvement in Explosive Compound.

Specification forming part of Letters Patent No. 145,403, dated December 9, 1873; application filed August 30, 1873.

To all whom it may Concern:—
Be it known that I, Carl DITTMAR, of Boston, Massachusetts, have invented a Preparation of Vegetable Fiber, in a new and distinguished manner, for the manufacture of Explosive Compounds, of which the following is a specification:

I use vegetable fibor of any kind, raw or manufactured (as old linen or cotton rags, etc.), which I render to a fine pulp in the same manner as it is done in the manufacture of paper, with similar machinery, by open fire common steam or superheated steam and chemicals. The greatest care must be taken to render the tiber chemically pure by bleaching it and treating it with acids and alkalies, and outwashing those chemicals; after that I pre-pare this chemically pure pulp in different ways.

1. I press it in sheets of about one-sixteenth part of an inch in These trial screen or about one-streem part of a men an thickness. This thickness may be lessened or increased to suit the grains to the purposes to which the powder shall be used. These plates or sheets are first dried thoroughly, and then passed under a punching machine with punches the same diameter as the thickness of the sheets. The cylinders received in this man-ner I use for the best kind of powder. The remainder or whole sheets of the pulp pass through rollers, with cutters around the periphery—one pair of cutters cutting it in one direction, an-other pair cutting I tacross in a line at right angle to the former, so as to give grains of a square form; or the pulp may be formed into grains by any other method. The grains I treat now with a mixture of nitre and sulphure acid, in the same manner as it is done in the manufacture of gun-cotton.

[2. The same process except that the drird pulp is ground to the

finest dust and treated as above.]

amest oust and treated as acove.]

3. The pulp is scaked in a solution of sugar, or mannite, or inuthee, or similar substances, pressed in sheets and cut as above, or
formed into grains by any other method, or ground to dust after
It has been dried, and then treated with the mixture of nitrie and uphuric acid, as above. The greatest care has to be taken then surpunration, as above. The greatest care has to be taken thout to wash the superfluous acid out again, which is more difficult than by the former two processes. After this has been done, it is soaked in a solution of soda, pressed out and then soaked in a is some in a southout of some, pressed out and their sometime in a solution of nitrate of potash, or chinate of potash, or chinate substances, and then carefully dried. It is then ready for use; or it can be soaked after that, for blasting purpose only, with nitro-glycerine, etc. The combination of the vegetable fiber with sugar, etc., gives a very powerful explosive, and overcomes the difficulty in preparing the sugar, etc., alone with acids.

[4a. A combination with nitro-glycerine for blasting purpo

only.]

[4b. I'uip pressed into cylindrical form, soaked in nitric-gum, for blasting purposes. 5. Pulp rolled up tight for drill hole cart-

All the within-mentioned compounds formed without the use All ne within-mentioned compounds, formed without the use of nitro-glycerine, can be used for the manufacture of fireworks, as being better adapted for these purposes than common powder in giving out neither smoke nor smell, and also for gunning or artillery purposes in leaving no residuum and requiring no cleanng while in use.

The different explosive compounds manufactured in the diferent ways above described may be mixed together in different proportions, so as to give different strength, as may be required. The different compounds may be mixed with prepared or unpre

ared charcoal.

In preparing the vegetable fiber in the manner above described, I make a very powerful explosive, combined with the greatest safety, as the flueness to which the vegetable fiber is reduced by the destruction of the vegetable texture before the treatment with chemicals allows a more thorough action of the chemicals. Every one of the above described compounds can be fired by

means of a percussion cap, or, like common powder, with a fuse when well confined.

1. The herein-described process of treatment of vegetable fiber, the same consisting in reducing the fiber to a pulp, then compressing the pulp into a sheet or other compact form, and then reducing said sheet to a granulated or powdered condition, and treating the same in this condition with an acid or acids for the purpose of rendering it explosive, substantially as described.

2. Vegetable fiber prepared with a solution of sugar, mannite, or amylum, or inuline, or other substances, substantially as herein described, and rendered explosive by nitric acid.

CARL DITTMAR.

Albert Brown, Edwin A. Brown,

PATENT FOR "PARCHMENTING."

PATENT FOR "PARCHMENTING."
The specification of patent No. 179,688, dated July 10th, 1876, is for the dipping of the pulp, mixed with sugar or not, after having reduced it to grains, or the compact form as already described, in a bath of sulphuric acid, and then subjecting it to a washing proonto or supparro send, and then subjecting it to a washing pro-cess, with water, to remove the acid. "In this way the pull be-comes like parchment, or has characteristics thereof. Next dry the material and subject it to a bath of nitrie and sulphuric acids, as cotton is usually treated for being converted into what is tormed 'gun-cotton.'"

By "parchimenting, as explained, the grains or masses of pulp before treating the same with the mixture of nitric and sulphuric acids, an explosive compound is produced with grains or masses that are very smooth and not adhosive to one another—one much better in use then one made without the parchmenting pro

Second Proof-Description of the Manufacture.

In the Forest and Stream of June 6th, 1878, Vol. X. page 18, is to be found a description of the process of manufacture as witnessed at Binghamton, N. Y., the previous Friday, by a then representative of this paper. The account was prepared with the direct verbal assistance of Mr. Dittmar, and the correctness of the decription was never questioned by him after publication. It was as follows :-

Now as to the details of the process. The basis of the composi-tion is cellulose. Cellulose is nothing more than pure wood fiber. Formerly Mr. Dittmar used paper as the base, but finds it more Formerly Mr. Diffmar used paper as no base, out most advantageous to purchase from paper manufacturers poplar pulp. This pulp is taken and washed thoroughly, until it is nearly chemically pure. It is pressed, then dried, then ground into a uniformly floconous form, all the lengths of fibre being destroyed. uniformly floconous form, all the lengths of flive being destroyed. It is now mixed with sugar and starch, then axain dried. Now it goes through what is called "the parchment process." When paper, under certain circumstances, is treated with sulphurifue acid, it takes a peculiar dense form resembling parchment. The material is now again washed and dried, and served, It is now subjected to a mixture of sulphuric and nitric-acid, again washed and dried, to be treated further with an alkaline base, saltpeter being employed. Now, after ug, aln being cleansed and dried, the last process is to treat the grains of Dittmar powder with a coating of soluble glass. This last substance not only protects the cowder from pascether moisture, making it lander and denser. ing of soluble glass. This last substance not only protects the powder from absorbing moisture, making it harder and denser, but diminishes very much any rapid explosiveness. A final very gradual drying completes this process. Of course there are a good many bits of practical work in the manufacture of the powder, in order to make it perfect, which depend on the chemical skill of the superintendent, Mr. Dittmar.

Mr. Dittmar at this time also explained to the visitors that not being chemists they could not fully understand the nature of the different processes.

Third Proof-A Chemist's Report.

A can of "Dittmar Sporting Powder," C brand, was received by us, sealed, Aug. 31st, and with other samples handed to Prof. Henry Morton, President of Stevens Institute. We gave it to Prof. Morton because we knew of no chemist who was more competent, or who stood higher than he in this special field, nor of anyone whose report would be more readily received as conclusive and sufficient. We simply asked from him, without explanation as to our purposes, a report upon the character and composition of the powder. Following is his reply:-

STEVENS INSTITUTE OF TECHNOLOGY, HOBOKEN, N. J., Sept. 22d, 1880.

Editor Forest and Stream :-

Editor Forest and Stream.—
At your request, having made some examination of various samples of Dittmar powder sent me by you in sealed packages, 1 now proceed, as you desire, to make a general explanation of the destructive character of this powder as compared with ordinary gunpowder, the nature of explosion as concerned in such substances, and other related matters inquired into by you.

In the first place, explosion in its general sense may here be defined as a rapid chemical combination resulting in the development of large volumes of gas and an intense degree of heat. The rapidity of this act of combination may vary within wide limits, and when it is extreme, as in the case of nitro-glycerine for example, it is generally called detonation.

Between bodies which explode like gunpowder, and those which detonate like nitro-glycerine, there is, as a rule, this characteristic distinction.

which detonate like nitro-glycerine, there is, as a ruie, this characteristic distinction.

Gunpowder and like explosives are simply mechanical mixtures of the substances whose sudden combination constitutes the explosion. In the most thoroughly made gunpowder, anyone with a microscope, could easily pick out the distinct particles of nitre, sulphur and charcoal which constitute it, and whose combination is to produce its explosion.

A certain amount of time will therefore be needed for their union with each other in the act of explosion on account of their previous separation in space from each other.

In nitro-glycerine, gun-cotton and other denoming bodies, on the other hand, the ultimate molecules of the substance are uniform, and in each smallest particle visible to the most powerful microscope are present all the elements whose union is to constitute the explosion of the substance.

It is therefore evidently possible for these to unite with each

It is therefore evidently possible for these to unite with each other with far greater rapidity on account of their preëxistent nearness, and thus to produce a vastly more rapid, or sudden ex-

plosion, or detonation, It is true that in both classes of bodies other conditions may

It is true that in both classes of bodies other conditions may very largely modify these tendencies.

Thus nitro-glycerine may be made to burn like kerosone if ignited in an open vessel, and gunpowder, if tightly inclosed and fired by a violently fulminating fuse, may be made to detonate in some sense; but nevertheless these distinctions exist and have a marked influence on the character of the two classes of explosives.

From this it follows, for example, that gunpowder, when made in the best manner, has its highest explosive power, which can only be increased by such extraordinary conditions of solid in-

only be increased by such extraordinary conditions of solid inclosure, or violent tulminating lightion, as could never be present in its use with a ride or shot gun.

Moreover, any fault in its manufacture could only diminish its efficiency by landequate proportion of parts, or incompleteness of mixing, and could by no possibility raise it into the rank of a detonating explosive, on the other hand, there will be unterpreted to nossible violence in the explosion of the very same

want a detonating explosive on the explosion of the very same material, depending upon its degree of compaciness and the na

ture of the means of firing, even within the limits of such varia-

ture of the means of uring, even within the limits of such varies tions as might occur in the use of an ordinary fowling piece. We thus see that with the second class of explosives there is an element of uncertainty and possible risk, resulting from their constitution.

constitution. Considering, now, the Dittmar Powder in this connection, I find it to consist essentially of two varieties of nitro-cellulose, cone bought the nona-nitro-cellulose, essentially identical with ordinary explosive gun-cotton, and the other the hepta and octo-nitro-cellulose. lose, \* essentially identical with the so-called "negative cotton." used to make collodion for photographers. There are also present some portions of other varieties of nitro-compounds, in some ent some portions of other varieties of nitro-compounds, in some esses, as nitro-starch, nitro-sugar, etc., but these do not essen tially effect the general character of the material.

It also contains a portion of niter. Its mode of manufacture is essentially that used in the preparation of the ordinary gun-cot-

From this it will appear that it belongs to both the above rrom this it will appear that it belongs to both de above named classes of explosives, or rather possesses many of the cha-goristics of both. In so far as it is a mixture of two nitro-cel-luloses and niter, it tends to explode with noderate rapidity when properly ignited; and insomuch as it concains a large amount of ona-nitro-cellulose it is liable under certain conditions to undergo

a detonating explication.

The problem of manufacturing gun-cotton of uniform qualthe pronoun of manufacturing gan-cotton of different quar-ty, and not liable to change by keeping, and of the use of the same in gunnery, has engaged the attention of Baron Lencke, in Austria, and Prof. Abell, in England, as all know, for than a dozen years, and yet, as a practical outcome, I be that except for destructive explosions, such as in mines shells and torpedoes, it is not to-day even recommended

This indicates that extraordinary difficulties have been encountered and that great care is required in its manufacture.

In the Dittmar powder we have, in the first place, a mixture of two kinds of nitro-cellulose, one of which is identical with explo-sive gnn-cotton, and this, if used alone, would be evidently open to all the objections which have restricted the use of ordinary gun-cotton, but the process of manufacture is so conducted as to produce not only this highly explosive nitro-cellulose, but also a portion of the non-explosive variety. This will, of course, dilute or restrain the violence of the other, but as it would also by itselfall to burn up outirely, some niter is added to supply the needed fall to burn up outerly, some niter is accorded outply the neaced oxygen. This is essentially the theory of its action. Now, of course, if it is difficult to make with certainty a definite nitro-cel-lutose like ordinary gun-ordinary to two or more varieties of nitro-cellulors which shall be uniform in successive batches, and hence the greatest care is required, and each lot should be care ully tested and other precautions taken to secure this end.
That a powder safe under all ordinary conditions can be and is

now made in this way, I by no means intend to deny; but only to point out the fact that the burden of proof lies on the side o those point out the fact that the ourden of proof neson the sade chose who maintain the affirmative, since the "a priori" considerations lean the other way.

In comparison with ordinary gunpowder this consideration is

worthy of attention. In ordinary powder no accident in manufacture or subsequent change can make it more explosive than it rectire of subsequent change can make it more explosive than is intended to be, while in any such material as the Dittmar powder it is quite possible that in its first production it should be made much more violently explosive than is intended, and by keeping it might undergo a change tending to increase its sensior even to cause spontaneous explosion. The latter, l admit, is not probable, but yet has occurred in the case of gun cotton on many occasions.

In conclusion, I would say that where there was an advantage

In the use of such a powder as the Dittmar, warranting the acceptance of a little risk, its use would be judicious, but that abundant evidence of its safety should be adduced before we could fairly regard it as involving no more risk than the ordinary gunpowder HENRY MORTON.

Fourth Proof .- Inference from the Directions.

We shall permit the reader to draw his own inference from these sentences from the directions. The italics and capitals are not ours, but theirs, and the directions are those which came to us with a can of sealed powder from the Dittmar Powder Manufacturing Company (No. 2), Sept. 1st, 1880 :-

"DIRECTIONS FOR LOADING DITTMAR POWDER

"Breegi-loading Snor Guns.—Grain: B (coarse) C (fine):—
"Use half in weight of black powder, or the same quantity by
teasure. Tap the powder measure a few times to pack and setmeasure. Tay the powder measure a tew times to pack and set-tle powder down evenly. Put on 2 pinks or black edge wads, for paper shells one size larger than bore, and for metallic shells two sizes larger, and ran the same well down with either hand or light mallet. If not contined by large wads and well rammed, the powder acts too slow. The more it is pressed and confined by wads, the stronger the results will be, and recoil and report ine correspondingly. If pounded too hard it will produce wild

ots. \* Muzzle-loading Shot Guns.—Grains: FFF (very fit

"Use same quantity by measure as black powder. Put on a couple of large pink or black edge wads, or some large pasteboard wads of large fills or black edge wats of some large passeconds wat and ram the same well down. If paper wadding be used, take some more than is used for black powder and ram down hard. The head of ramrod should be broad, and fit the bore as near as possible, to be able to put the wads down evenly and solidly. Load the shot as usual. Use only FFF for muzzle-loader.

BEREGI-LOADING RIPLES.—Gran: F (medium):

"In loading rife-shells, care must be taken that each charge is ovenly packed, which can easily be done by tapping the powder measure alike at each load. Use precisely the same measure, or measure mine a case however, the precisely are same measure, or j to 4 in weight of black powder. Use as large and neight tightly, or the shell expand too much after shooting, so that the built goes in loosely, use a large would or several thin wash, but always so that the however is not pressed, though it should be shaken and set-the powder is not pressed, though it should be shaken and setarea down. If pressed, the powder will not work accur needs confinement, BUT NOT PRESSURE, in bree rifies. ed, the powder will not work accurately, as in

"NOTICE! All Canisters are sealed, and only warranted when the seal is unbroken."

Is that "Notice!" simply ridiculous, or, in view of what we have now learned, is it not significant as well? Fifth Proof-Mr. Carl Dittmar's Own Sworn State

ments.

We shall now show from his own statements, made

under oath, not only the fact that the so-called "Dittmar Sporting Powder" is, as we have said, analogous to guncotton and nitro-glycerine, but also the fact that Mr. Dittmar was, and is, fully informed of the true and exceedingly dangerous character of his powder,

If we may credit his declaration, Mr. Dittmar has been engaged in the manufacture of explosive compounds almost twenty years.

CIRCUIT COURT OF THE UNITED STATES.—New York, Feb. 11th, 1890—Before John A. Shields, United States Commissioner for the Southern District of New York. Deposition of Carl Dittmar, who, being first duly sworn, deposes and states, in reply to

Direct Question 18. And from there [the army] where?

Answer. From there I went to Spandau, and became cal director of the Royal Prussian Powder Manufactory.

O. 14. In what year was that? 4. 1861

spect thereto.

A. 1601.
Q. 19. State at large what species of powder you were there occupied in making.
A. It was the common gunpowder. Besides that, I had charge

of the gun-cotton manufacture. Q.23. What was the method of preparing gun-cotton at that

time by you?

A. That was purified cotton immersed in a bath of nitric and

sulphuric acids.

A. 28. I stayed there till about 1862. A. 26. Then I became a di-

Q. 28. State your occupation there in respect to explosive powders, or any experiments you may have made at that time in re-

A. I manufactured powder made out of sawdust and acids O. 29. State your preparations and methods of manufacture

A. That was in the same way that gun-cotton was made, only I sed sawdust instead of collon.

A.32. I cleaned the sawdust—purified it. A.33. I treated it with

diluted acids and alkalies to get the impurities out. Then subjected it to what?

To a bath of the mixed acids.

33. In the same manner as gun-cotton?

In the same manner as gun-cotton. But this was powder alleged to have been made by him

The testimony is introduced here only to in Europe. show that Mr. Dittmar claims to have been long engaged in his work; and also to show that according to his own testimony he has been working at the manufacture long enough to have made his nitro-cellulose product uniform, if it could be made uniform.

Mr. Dittmar thinks that he knows more about the subject of high explosives than anyone clse. In the same deposition we find this :-

Cross Q. 907. Do you consider yourself an expert as to the characteristics, manufacture and use of high explosives?

A. Yes, sir. I consider myself an expert. I think I know more than anyone else about high explosives. My knowledge in bigh explosives was known by the Prussian Government and foreign explosives was known by the russian coveriment and integri governments, and I had offers from the Turkish and Roumanian governments as early as 1883. I have made the best examinations in chemistry that ever have been made in the Royal Prussian Artillery and Engineer School. I have manufactured high explosives since about the year 1861, and have continued and incoming now to the "sporting powder" made by him

in this country, he says, same deposition, Feb. 19th

Cross O. 789. What is Titan powder?

A. I made different kinds of Titan powder; some was my sport ing powder, which is composed of, or at that time was composed of ceilulose, sugar and starch, treated with acids, and this compound was mixed with nitro-glycerine

And the following day, in the same deposition, in answer to Cross Q. 1.388, he says :-

Sometimes I made a miro-glycerine powder that was nitro-glycerine mixed with my sporting powder. That powder is not the common black powder; it is [Feb. 20th, 188]] one of my inventions, consisting of cellulose, starch and sugar treated with

cids. *Cross-Q.* 897. Is nitro-cellulose, "made as directed in the dualin patent, itself an explosive?

A. Yes.

s=0 898. Is it strictly analagous to gun=cotton :

A. Niro-cellulose described in process No. 2 is analogous to gun-cotton before it is mixed with niro-glycerine.

So much to show that Mr. Dittmar himself, on his oath, declares that his sporting powder is (Feb. 20th, 1880) made as we have said it is made, and that he knows it to be analagous to gun-cotton, as we have said it is, Let us now see how he confirms us in regard to our statement of his views of the relative explosive power of nitro-cellulose, nitro-starch and nitro-sugar, etc.

Re-direct Q. 1,612. What is nitro-cellulose as to its explosive nalities?

A. It is a compound worked in the same way as nitro-glycerine. It is detonated by a percussion cap. It is not necessary to use a percussion cap.

Re-direct Q. 1,613. But in the use of the percussion cap?

Me-nucci Q, 1,013. But in the use of the percussion cap;
A. Itwill detonate the same as nitro-giveerine.
CROULT COURT OF THE UNITED STATES, DISTRICT OF CALIFORMAL IF SQUITY.—Before N. Austin Parks, Notary Public and
Special Examiner, Boston, Dec. 19th, 1874. Deposition of Carl
Ditmar, who having been duly sworn, doth depose and say as

Direct Q. 134. You mention in your cross-examination gun-cot ton: are or are not most nitro-compounds, such as nitro-mannite. nitro-sugar and dextrine and gum treated with nitric acid, as well an grun-cotton, in their nature similar to nitro-glycerine? With they, as a rule, explode by the same means and under the same conditions as nitro-glycerine?

4. They are, and will so explode.

Cross Q.550. What is detonation?

4. Detonation as now generally understood with reference to blasting materials is substantially the instanteneous and simultaneous decomposition of the explosive.

Cross Q.550. How is it produced?

A. By a shock, a strong percussion cap or striking on an anvil also by setting the high explosive on fire under strong and close

\* Mr. Dittmar understands what detonation means. Deposition

Direct O. 135. Is the explosion of these substances produced substantially the same way as the explosion of nitro-glycerine A. Yes.

DEPOSITION REPORT SHIELDS

Re-cross Q. 1,610. (repetition of Re-cross Q. 1,640). Is not the ex-losion of pure uitro-glycerine much quicker than the explosion

of ordinary nitrated compounds? A No: it is not. I think some nitrated compounds are still

quicker than nitro-glycerine.

Re-cross Q. 1.615. Do you mean by quicker, more easy to explode, or more quick in explosion when made to explode?

A. More quick in explosion, and easier, so far as they would ex-A. Note quite in explosion, and easier, so far as they would explode by both means, fuse and cap.

Re-cross Q. 1,846. In what respect, according to your theory, are nitrated compounds more quick in their explosion than nitro-

glycerine? A. They have a quicker detonation and a quicker decomposi-

tion in the elemen

tion in the elements.

A. to Re-cross Q. 1,836. For instance, I consider ultrate-sugar\* a quicker explosive than ultro-glycerine.

A. to Re-cross 1,637. Nitro-o llulose exploded by means of a strong percussion cap may be just as quick as ultro-glycerine; 1

scrong percussion cap may be just as quick as intergreeffier. I consider that the slowest; it may be just the same; it may be no much different; the intro-cellulose may be slower, but it would not be much; it would be nearly the same, because I consider nitrate sugar quicker.

Re-direct Q. 1,715. You have stated that nitrate sugar was

itro-glycerine. Is pitrate starch quicker nitro-glycerine?

A. I am not so sure as to nitrate starch.

Re-direct Q. 1,716. If not quicker, is it of the same quickness?

A. About the same.

Re-direct Q. 1,717. Is the nitrate starch mentioned in your dualin patent, of the same quickness of explosion as nitro-gly-

A. It is either quicker, or just the same.

A. to Cross-Q. 2,893. It [the strength of the blasting powder] does not decend on the nitro-glycerine; but I can make it just as strong, if I introduce more or less of the nitro-cellulose, or nitrostarch, which are about as strong as nitro-giveering itself if exded with a strong can

Mr. Dittmar may stickle on the dualin patent starch, sugar and cellulose; but how will he stickle on this?

UNITED STATES CIRCUIT COURT,

New York, Feb. 19th, 1880.—Before John A, Shields, United States Commissioner Southern District of New York. Deposition of Carl Dittman, of Binghamton, N. Y., who, being first duly sworn, deposes and states, in answer to Cross Question 889.

"My gunpowder, when I first made it, had the same tendency as nitro-glycerine powder. It burst most all the guns at first, when I began to introduce it. It was JUST THE SAME AS IF I WOULD USE NITRO-GLYCERINE POWDER. I have it now so that it is tamed down, and don't burst any more guns.

We hardly think that Mr. Carl Dittmar, or the Ditt mar Powder Manufacturing Company (No. 2), will try to dodge that.

There it is bare and bald. Comment could not make it mean more than it says. It says all.

Mr. Dittmar thinks that he can write the English lan-

guage better than he can speak it. We will compare some of his written language with this verbal declaration,

CARL DITTMAR SAYS.

Writing to Sportsmen.

"I pledge my word of honor that I have never sent, and never will send, powder or sporting purposes which should have the slightest trace in itrogycerine in its coup settine."
Letter in Rob AND GUS, Aug. Htt, 1875, Vol. VI., page 289.

tith, 1875, Vol. VI., page 289.

"If some gontlemen have damaged their strus it would only be by negligence, and by not following my directions. It is absolutely impossible to damage a gun, week or strong, breech or muzzle-loading, if my powder is used according to my instructions."—Letter in ROD AND GUS. AUS. Tith, 1875, Vol. VI., No. 18.

M. No. 18.

"When J Best commenced making this new powder I had no more experience than your correspondent, but I may not had a single accident, although thousand thous in a variety of guns."—Letter sain as below.

"In conclusion I would say that sportsmen and ritimen

monials thus her received are in the highest degree satisfac-tory."—Letter in FOREST AND STHEAM, June 21th, 1875, Vol. IV., page 315.

Being first duly sworn.

"My gunpowder, when I first made it, had the same tendency as nitro-glycerine powder. It hurst most all the guns at first. when I began to introduce it. It was just the same as if I would use nitro-glycerine powdor "

Mr. Dittmar's written statements, already quoted in the first part of this article, are also interesting reading just here. Next week we shall publish a further exhibit of like affirmations, when we come to show how Mr. Dittmar evaded the charge that his powder might det-This will be of the past. A word as to the present.

The "Dittmar Sporting Powder" was never a fit material to put into the hands of sportsmen ignorant of its true nature. It is not now. It never will be. The manufacturers of it may "tame it down" for a century. We believe that they cannot make it, according to the patent specifications, so that when used in a gun it wi give uniform results. To remove from it the everpresent potentiality of working disaster, maining and death, they must abolish the laws of nature, and remove from the universe the molecule and the atom.

The Dittmar Powder Manufacturing Company (No. 2) cannot change the laws of nature.

<sup>\*</sup> hese terms mean that in several cases nine, eight and seven molecules of nitryle, the base of nitric acid, are combined with he cellul ose.

ANImple sugar is only another expression for nitro-sugar-

The Forest and Stream dislikes personalities; it never drops to calling names. But when the truth is to be spoken, that responsibility may be fixed, it will never fear to speak the truth.

If in the course of this article we have at times failed to separate the question of the safety of the powder from the course pursued by its manufacturers, it is because we have been reluctantly compelled to do so. From the very nature of the case the two are so connected that a discusson of the one could not avoid a reference to the other.

#### THE CREEDMOOR MEETING.

THE extended report which we offer of the work done and the results accomplished at the recent Fall Prize Meeting at Creedmoor, warrant careful scrutiny. These long lines of figures are not mere accidental arrangement of digits, but represent careful, intelligent application of the accomplishment of a result. The "Woodchuck Hunters," as they were jocularly called, who took the State Prize, did not blunder into it, but reached that honor by persistent endeavor on their home range. At that place they became accustomed to baffling winds and disadvantageous conditions. They became trained in the judgment of wind and its effect on the flying bullet; they gained the knack of steady holding, and then when they found a bad day at Creedmoor, they were in a measure at home, of course. There may have been other teams who were the victims of bad luck. The most skillful shot may miss, but the novice does not roll up a fine total. Falma non sine pulvere is the rule of the range. from which there is no escape. Every prize winner of last week earned his trophy and its honor by hard work. Not one of them blundered into his good fortune, and those who failed of their ambition have at least the satisisfaction of knowing that their leaders did not win by a fluke; that they have not been compelled to take a place behind "duffers." The popularity of off-hand shooting is indicated by the large number of entries in the short range matches, and this will probably continue to be the case so long as marksmen do not care to unite acrobatics with their target practice and reach the bullseye only through a fine grape-vine twist of the arms and legs over the green sward. The success of the regulars, while it should be looked for as a matter of course, is none the less an agreeable surprise. The army has taken a very sensible view of its position in the matter of rifle prac There is no doubt that when the movement for an intelligent drill in target shooting, was begun by the militia of the States, and of New York in particular, that the regulars were lamentably behind-hand. By a sort of general neglect the Springfield rifles in the hands of the troops were allowed to have a very quiet time of it, except when they were aimed so wildly and with so little effect against the Indian malcontents on our frontier. When rifle practice had become pretty well established among the volunteers, the deficiency of the regulars became so apparent that something had to be done. Then it was that the officers of the regular army came out frankly and acknowledged that their men were far in the rear, and joining hands with the militia the result has been of great advantage to both. Friction has developed effort, and the keen rivalry has spurred on the soldier and citizen alike to their best endeavors. Personally there is little choice between the make-up of the teams, but the fairure of New York State to appear in the International team match opens up a fruitful topic of official negligence, and is a strong confession by men competent to make it, that New York State is armed officially with an antiquated arm, and the name of "gas-pipe, which it has been dubbed by the men carrying it, is a singularly expressive one. The result of the Wimbledon Cup match may rouse the cry of professionalism, but as there was room enough and to spare above it, which the non-professional might have occupied, there does not seem to be so much room for complaint. On the whole the meeting was a success, though it does seem that after so many years' experience a more clock-work movement of the competitions should have been reached. As it is, the experience gained on many points at one meet ing seems to have entirely evaporated ere the date of the next gathering.

#### THE TILESTON FUND.

NEW YORK, Sept, 18th.

Editor Forest and Stream:

J have to acknowledge the receipt to date of further subscriptions to the "fitteston Memorial Fund," as follows:

FRED. N. HALL, Secretary.

THE INTERNATIONAL CRICKET MATCH.—We publish this week the most full and comprehensive report of the United States-Canada Match, at Philadelphia, that has appeared in the public prints. It is from the pen of our cricket editor, who witnessed every ball bowled in the match, and every phase of the game has been faithfully detailed. Our going to press at an early hour last week prevented its appearance in last issue.

# Matural History.

BEAVERS PARTIALLY DOMESTICATED.

THE interesting note from E. B. B., which we published last week on beavers in Iowa, makes the accompanying extract particularly interesting just at present. The beavers referred to were introduced into the Isle of Bute, by the Marquis of that Isle in 1874, and seem to have done very well. The succeeding remarks are taken from the Journal of Forestry, and are from the pen of Joseph Stuart Black, keeper on the Bute

Their food in winter consists wholly of the barks of Their food in winter consists wholly of the barks of trees; had they a choice I have no hesitation in saying they would prefer the willow and poplar. These not growing in the enclosure they had just to altered a growing in the enclosure they had just to altered they could get consisting of oak, plus tree, clin, thorn, hazel, Scotch fir and larch oak, plus tree, clin, thorn, hazel, Scotch fir and larch of the hard wood, they seem to prefer clin to plane tree, then oak, of which they eat sparingly. Of the first, the Scotch has the preference; as for the larch, they did not touch it till early in 1878, since which time they have taken to it very well. As for the alter and spruce fir, they cat almost nothing of them. Along with all these we have always given them a supply of willow. In summer they eat freely of the common bracken, likewise grass, and young shoots of every description growing in the place. In autumn they grub up and feed upon roots, chief among which is the Tormentil (Polentilla tormentilla), known to Scorch people as "tormentil root," and the young tender shoots of the common spurts before they appear above ground, at the same time cutting down a tree now and again and feeding on the bark.

As to the tree felling it is all done at night; the number which they have cut down amount now to 187 trees from five feet in circumference downward. These are all forest trees, besides many smaller bushes. Before cutting down a tree, they mark it all round at the height they wish to cut it. They begin to cut at the opposite side to which they intend the tree should fall, invariably making it fall with the top to the water. Where they grow near enough, they make them fall across the stream is flooded; also if convenient they take advantage of building a dam where some of the trees should fall, invariably making it fall with the top to the water. Where they grow near enough, they make them fall across the stream is flooded; also if convenient they take advantage of building a dam where some of the trees is cross se; had they a choice I have no hesitation in saying y would prefer the willow and poplar. These not wing in the enclosure they had just to adapt them-res to circumstances, and take a share of what trees

the air, and it no danger is apprehended it dives and disappears. In two or three minutes a number of the colony begin to appear and disperse themselves, some to swim and sport about in the dam, while others go in quest of food. If one of them espics danger it strikes one sharp loud stroke on the water with its tail, when all of them that are out, come tumbling into the dam and

all of them that are out, come tunning into the eart and disappear.

I have seen them wrestle in playfulness and fight in anger, and also when the mother was feeding and the young one sporting about in the dam, I have seen it go and begin to tease her, when, it is he did not wish to be the property of troubled with it, she would strike and snake it, and pitch it from her in the dam. They will allow of no laziness in any member of the colony; if any such there be, they are beaton and driven out to live as best they may. These so driven out generally roam about, making a burrow here and there, where they live for a few months, and disc

ON THE GEOGRAPHICAL DISTRIBUTION OF SHELLS correspondent, N., who writes from North Vernon, Ind., sent us an interesting though brief account of a goose

which was caught by a fresh water mussel (Unio). Similar instances have before been noted, both in FOREST AND STREAM and elsewhere, and are always interesting, because they show so plainly the method by which shells of one kind or another may be transported for long distances over the land, and may thus be introduced to waters far from their real homes and which they could scarcely reach in any other manner. This point was first brought out by Dr. C. Darwin and afterwards elaborated by Alfred Russell Wallace in his magnificent work on the Geographical Distribution of Animals. Our correspondent's note is as follows :-

Some weeks ago, in company with others, I saw a goose limping along more clumsily than is usual, and on examination found that her foot had been caught in the shell of a live mussel. She was relieved, but at the expense of a toe.

METROPOLITAN BLACKEIEDS.—Mony years ago the crow blackbirds (Quisculus versicolur) roosted in the White River bottom, a few miles below our city. Their feeding ground was north of Indianspolis, so that morning and evening there was an immense flight of these noisy fellows. They finally began to be familiar with the noise and bustle of city life, and would nest in our shade trees. Then they became more bold and began roosting in the lawns of Calvin Fletcher and Judge A. Le Roach. Their next move was to take possession of the shade trees on North Pennsylvania and Meridian streets.

I suppose the cause of these birds deserting their for-

I suppose the cause of these birds deserting their for-mer roosting place in the lowlands along the river, and coming to the city shade trees is the fear of owls and "varnints."

Four years ago I noticed among the blackbirds roosting in front of my house several cow buntings, or cow pen birds (Icteous pecoris). The next year the latter came in distinct flocks, and have remained separate each year since. This year there are not less than ten thousand occupying the soft maples in front of my yard. They arrive from their feeding grounds before sundown, and after a short rest in the trees surrounding my fountain, they descend and drink. Sometimes they catch the spray, flitting back and forth until satisfied; but generally go to the ground at once and surround the fountain, some flying onto the "rockery," and drink in flocks of hundreds.

should the evening gun, at the arsenal, be discharged

Should the evening gun, at the arsenal, be discharged while they are thus engaged, every hird is silenced, and at once flies to the tree-tops. The arsenal is over, a mile and a half distant.

These little fellows have become quite tame, so that now the carriages and foot passengers do not disturb them. They even fearlessly drink while my children are playing within a few feet of them.

In the morning they fly from the maples into my fruit trees, and there "plume" themselves ere they go to their feeding grounds among the herds of milch cows west and north of the city.

feeding grounds among the herds of milch cows west and north of the city.

During the night these birds keep up a chirping sound. Should a band of music pass along, they seem greatly disturbed and fly from their roost, keeping on the wing in circles above the trees until the noise has ceased.

As to other interesting characteristics of this bunting, I refer your readers to Audubon and Wilson.

J. F., Indianapolis, Ind., Sept. 14th.

Note that the state of the stat

A QUESTION ABOUT QUAIL.—Waveayanda, Sept. 5th.—Editor Fovest and Stream:—Thinking the following worthy of note, I take the liberty of sending it to you. A quali's nest containing thirty-six eggs was found on a gentleman's farm at Warwick, N. Y., all of which hatched but one. What is the largest number ever found in one nest? The old female had a narrow escape during her incubation, from a seoundrel out shooting. Having flushed her from the nest, he levelled his gun at her and was just pressing the trigger when the farmer saw him and drove him away. This, I should say, was pot hunting extraordinary.

WALLKILL.

ANOTHER CAPTIVE COCK.—Neversink Lodge, Gnymard, Orange County, Sept. 10th.—Editor Forest and Stream:—Having noticed the interest taken by you in woodcock in captivity, I think it may interest my brother sportsmen to know that I also have had one in my possession for a fortnight. My keeper went out a few weeks ago, and, crossing a field where corn was being cut, saw that a man had just caught a healthy and lively cock in a bunch of corn. The captor presented him to Philip, who feeds him according to your rules, and the bird is doing well. Can you tell me what I can do in the winter with Mr. Timberdoodle? Now worms are plenty, but in winter I wouldn't know what to feed him.

A. E. Godeffroy.

Probably the best way would be to store up a lot of

Probably the best way would be to store up a lot of worms for him. A barrel partially filled with earth and placed where it would not freeze, would hold worms enough to last even a woodcock through the winter.

# Hish Culture.

SALMON OF THE PACIFIC COAST—HOW THE SHAD HAVE MIGRATED.

Astoria, Oregon, July 10th Some time ago, a year or more, a communication appeared in Forest and Stream on the subject of fly fishing for salmon in the Columbia River. The writer, C. C. R. (Capt. Rockwell, United States Coast Survey?), asserted that the reason the salmon did not take the fly during teape, trockwell, United States Coast Survey II, asserted that the reason the salmon did not take the fly during the spring and summer months was that owing to the discolored condition of the water during the spring and summer freshets it was impossible for the fly or spoon to be seen. The reason was quite plausible, and, in the presence of a better, would have been accepted as conclusive. At the time of reading the article referred to, I had been fishing for salmon with trolling spoons for two years, and I had observed that whenever a salmon was hooked, it had always been below the line of fresh water. In the fall, when the freshet has subsided and the water is low and clear and the tides are high, the salt water reaches a point abreast of the city front; and that is the highest point at which a salmon has ever been taken with a hook and line. One day last fall, to test the matter fully, I rowed to Tongue Point, four miles above the city, where the water is fresh, and, though the fish were leaping all around me, I could not get a bite; then droping on the ebb to Smith's Point, a mile below the city, leaping all around me, I could not get a bite; then dropping on the ebb to Smith's Point, a mile below the city, in salt water, I brought four to gaff in less than an hour. To test the matter more fully, during the present season I have trolled for them nearly every week on the upper tide waters of the Klaskani and Young's rivers, at a point beyond where the muddy water of the Columbia reaches, and though I have seen them leaping many times I have not yet succeeded in getting a rise. The truth seems to be that the spring and I all salmon, which, by the way, are two names for the same species, like the other oneorlypychi, is a fish that feeds exclusively in salt water, and takes a bait fly, or soon only on its feeding

by the way, are two names for the same species, like the other oneorhymehi, is a fish that feeds exclusively in salt water, and takes a bait, fly, or spoon only on its feeding grounds; that is, in salt water only.

While writing of salmon, I wish to take exception to some of the statements of "Mowitch" in his article on Frazier River fish. He says, "I believe salmon return to the river of their nativity... to spawn. Each river lass its own kind of salmon. These are peculiar to itself alone. Salmo quinnat has never been seen in Frazier, nor a 'suckeye' in the Columbia," etc. I am willing to admit the general truth of the first of these statements; the others I believe to be entirely erroncous. It is true that the opinions of "Mowitch" have been long held by Sacramento and Columbia canners, and they have generally been accompanied by the assertion that the salmon of the northern rivers were not only a different, but that they were an inferior fish; and this assertion is true to a certain extent, as will appear presently. But the opinion is now held by some of the best observers that every they were an inferior fish; and this assertion is true to a certain extent, as will appear presently. But the opinion is now held by some of the best observers that every member of the salmon family found in any river, from the Sacramento to the Yukon, in Alaska, will be found to a greater or less extent in all the rivers of considerable the strength of the Columbia, Chaptains, and the Columbia (Augustus).

the Sacramento to the Yukon, in Alaska, will be found to a greater or less extent in all the rivers of considerable size. The spring salmon of the Columbia (Oncorhypchus quinnat) is known to be identical with the spring salmon of the Sacramento, and constitutes the bulk of the season's "tum" in both, though in the Columbia they average a little larger and are just a trille fatter. The spring salmon of the Frazier is the same fish, but considerably less in size and fatuess. The Oncorhypchus werka, the "suckeye" of the Frazier, the "blue-back" of the Columbia, and, changed in color by proximity to the spawning season, the "redish" of the Idaho lakes, constitutes the bulk of the "truu" in Frazier, but is much less abundant in the other streams.

As a canning fish it is inferior to the quinnat; so much so that canners here, having regard to the reputation of their brands, refuse to use them at all. As a fresh or salting fish they are nearly, if not quite equal, to the quinnat. The Salmo mylitiss, "steelhead" of the Columbia and Sacramento, and "trout" and "salmon trout" of Frazier, is also found northward to the Yukon. Eaten fresh, its quality is good; for salting it is inferior; for canning it is worthless. In closing I wish to say that I am indebted for many of the facts in this article to Prof. D. S. Jordan, of the United States Fish Commission, who has personally examined the salmon of every considerable fishing station as fair north as the Frazier, and received specimens from an assistant, who has spent the present season in Alaska.

I cannot close without saying that the conclusions reached by Frof. Jordan are not only undoubtedly correct, but, in view of what we know of ocean currents, are no more than what at houghtful man might have an atcipated. There are two ocean currents on the Pacific Coast of North America. One. a narrow current, one to

are no more time which a trought at man lingth have and ticipated. There are two ocean currents on the Pacific Coast of North America. One a narrow current, one to two miles wide off the capes and headlands, and ten to twently along the bays, runs northward, close to the shore. two miles wide oil the capes and headlands, and ten to twenty along the bays, runs northward, close to the shore. The other, an immense ocean river, of which the first is only the eddy, turned from its course by the Aleutian Islands and Alaska, sweeps along the coast, downward to the tropics. A salmon from the Sacramento has only to drift on the inner current to find himself in a few months, and without effort of his own, at the mouth of Frazier or the Yukon; and one from the Yukon at the Frazier, in the outer current, would soon reach the mouth of the Columbia or the Sacramento. I do not pretend or suppose that any considerable part of the salmon of any river are so drifted about by ocean currents; but but I do believe that enough are so drifted for purposes of colonization. I think, if the truth could be known, it would be found that enough are drifted in this way to numze those who have given no thought to the subject. The history of the shad introduced a few years since into the Sacramento is a case in point. They had scarcely attained a length of eleven inches, before specimens began to be taken in the Columbia; and when we think how small is the sething ground on which these sakad are caught, it is safe to estimate that there are hundreds. how small is the setting ground on which these shad are caught, it is safe to estimate that there are hundreds, and perhaps thousands, in the river for every one taken; and were it not that the water of the northern rivers is too cold for their successful propagation, we might look to see the whole Pacific Coast stocked before many years from the one innortation to the Sarramento. to see the whole Pacific Coast stocard out of from the one importation to the Sacramento.

C. J. SMITH.

THE PRIZES AT THE GERMAN EXHIBITION.—The Fis-cherei Zeitung says that the honorary prizes (diplomas,

awarded at the Berlin Fishery Exhibition are completed and ready for transmission. The medals (with diplomas) will be ready early in autumn. The Wurtzburg prizes are finished and ready to be sent to their owners.

Saibling Eggs-Proper Credit.-One of our German correspondents writes as follows: "In your issue of July 29th it is said that the German government has sent a present of of a lot of eggs of the saibling, Salmo salveli nus, to Mr. Livingston Stone. The error is slight, yet as it is a question of placing the credit in the proper place, it is only fair to say that the government had nothing to do with the matter, as the eggs were sent entirely at the cost of Mr. von dem Borne, the celebrated fish culturist of Berneuchen, who packed them in snow, in which they arrived in America in good order.'

Our correspondent also writes that some eggs of brook trout, sent from this country to Germany last winter, arrived in very bad order; in fact were warm and rotten,

Soles in America.-We have received a communication on this subject, from an anonymous correspondent, with only his alleged initials signed. His statements have no value whatever when given in this way, and if he will send in his address to this office we will considder the propriety of publishing his letter. If he does not care to have his name appear it will not, but we must be satisfied regarding his competency to speak on this subject before we print his letter. Again and again we have said that it is useless to write to us anonymously, and if correspondents would only remember it, it would save both trouble. We require the name as a guarantee of good faith merely in most cases, but in the present case we have grave doubts if the writer is competent to indentify a sole, a doubt which he can easily dispel if he is familiar with them.

WORK OF THE FISH HAWK .- The new fish-hatching steamer, in the absence of fish eggs to hatch, is engaged in the investigations of the fish commission at Newport, and made a most remarkable day's work about a fortnight and made a most remarkable day's work about a fortnight ago, in which ever 120 species, vertebrate and invertebrate, were added to the fauna of Southern New England, by trawling in 200 fathoms, sixty miles southeast of No Man's Land. Our informant, who was on the spot last week, writes that Prof. Goode had just finished a paper, describing seven new species of fish which are included in four new genera, from that day's work.

### THE FLY IN NORTH ELBA.

AU SABLE FORKS, N. Y., Aug. 2d.

N last Thursday morning at 7 o'clock, my wife and
I left our pleasant home in this village, for a short
trip among the trout streams. We drove across the
Flume, along the banks of the Au Sable River, through
Wilmington Notch, past the foot of Whateface Mountain,
and feasted ourselves way across of

Flume, along the banks of the Au Sable River, through Wilmington Notch, past the foot of Whteface Mountain, and feasted ourselves upon some of the wildest and grandest scenery in the Adirondacks. This feast of the eye and mind, however, did not spoil our appetites for the pleasant lunch we took on the banks of the river, just before we reached the bridge of North Elba.

We arrived at Cameron's, the place of our destination, a little before 2 o'clock, having enjoyed one of the most delightful drives of our remembrance. The sky, which until now had been almost perfectly clear, began to cloud over, and before we got our things fixed and ready for fishing, the rain was falling furiously. I unpacked my orvis rod, attached my read, and arranged three flies upon my new "mist colored" leader, and waited for a lull in the storm, which soon came, though the rain did not entirely cease falling. I slipped on my light waterproof, while Mr. Cameron, who offered to accompany me, got himself into one of the heaviest of black overcoats, and we started for the pond, which lay about a quarter of a mile below us in a lonely meadow. This pond is made by a dam across Ray, Brook, and will perhaps average twenty-five feet in width, and is somewhere about half a mile in length, though it is hard to tell where the pond ends, and the brook commences.

When we reached the pond, we found that the old flat.

ends, and the brook commences,
When we reached the pond, we found that the old flat When we reached the pond, we found that the old flatbottom boat we were to use was on the opposite side, but
Mr. Cameron was equal to the emergency, and taking off
his clothes (including the black overcoat), he waded
over and returned with the boat; in the meantime 1
whipped the stream, but either Mr. Cameron (without
his clothes and overcoat), had frightened the fish, or else
there were not many just at that place, for I only caught

two little fellows. We got into the boat, and started slowly down stream until we came in reach of a famous hole, from which I had taken many a fine fish in years gone by. We pushed one end of the boat upon the muddy bank, and waited for a few minutes until the trout had time to recover from any uncasiness that our approach may have caused them. In a short time they were jumping all around us: fine fellows, over a foot long would spring clear out of the water, and show their rainbow tinted sides as they tumbled back again. I stord up in my end of the boat, pulled out about fifteen feet of line, made a cast close to the shore, in the shollow water, to get my line out, and to see if everything was all right, and then swinging my line behind ne. I brought my flis forward when they fell close to the opposite shore, in the deepest water, and where the largest fish had been jumping. I had just time to see that they had fallen straight and lightly, when the water splashed and I gave a jerk, My reel started as my line led down stream. This went on for some seventy feet, when a turn in the stream was about to bring my line into the brush, so I put my fluger on the reel, and turned the butt of my light pole toward the fish, the graceful rod bent until the tip had passed my bands, when it began to straighten, and I knew my game had been stopped. My line ran up stream, only to run down again, and I knew that there was something strong and plucky on my hook. I then occurred to me that I had forgotten my landing net. It must have been some twenty minutes before resistance ceased, and my fish were slowly led upon the mud, where they lay quitely until Mr. Cameron lifted them with his hands into the boat. On the first If we found a trout weighing about three-quarters of a pound, a smaller fellow on the next hook, and a noble fellow which afterward weighed one pound and fifteen ounces, on the end hook. This last proved to be the largest trout caught his season upon afty. The sport was continued until we had eighteen, I having ta

other, the smallest of which weighed a little over half a pound.

With a little excusable pride, Mr. Cameron was anxious that we should get home, so as to display our fish as the mail stage passed, but we were too late for the stage. As we were hurrying for the stage, Mr. Cameron, who a short time before had been feering a frost, remarked upon the sudden change in the weather, and looked a little blank when I told him that it was cold example nurside of his overcoaf.

marked upon the sudden change in the weather, and looked a little blank when I told him that it was cold enough outside of his overcoat.

As soon as some of our fish could be cooked, supper was announced, and we were ready for the supper. The supper was all that could be desired, and by no means its least recommendation, was the neatness and cleanliness of everything about the dhing room and hable. Mr. Cameron has a large new house, with accommodations for some forty guests, the rooms are moderately furnished with new cottage furniture, with spring beds, hair mattresses, and sheets as clean, white and pure as a politician's record painted by his own organ.

We went to bed early, and slept soundly. Friday morning foretold a splendid day. After a good breakfast, and a smoke, my wife and I started for the stream, with young Byron Cameron as guide, and Jenny Cameron as company and guest. Byron is a bright boy of some thirteen summers, and Jenny is a sweet, pretty child, some two years younger.

company and guest. Byron is a bright boy of some thirteen summers, and Jenny is a sweet, pretty child, some two years younger.

When we reached the brook the sun was very bright, the water clear, and not a breath of air to make a ripple upon its surface, consequently the trout rose to the fly slowly, but since we did not need the fish, we were not not disappointed. Byron made suggestions which indicated that he was getting a little suspicious of my skill as a fisherman, but by following his advice with no better results, he was silenced if not satisfied. We soon, however, had twelve, the number agreed upon before we left the house, and on two occasions I took two at one cast. These twelve weighed eight pounds and two ounces, While fishing, we saw a lawk strike a bird, which fell perfectly dead on the bank near us, we went and got the dead bird and found it to be a nighthawk. My wife was greatly interested in the sport, and handled the fanding net so dexterously, that Byron and I decided to trust her with the pole for a short time. I releved up to six feet of line, cut a nice bait out of the breast of our dead night-hawk, which I put on the end fly and banded her the pole.

She mede a cust the pole struck the years and the

hawk, which I put on the end fly and handed ber the pole.

She made a cast, the pole struck the water and the line fell in a lump at the end of the pole, but since the pole did not break, I felt easy. A three-qearter pounder took the hook, but the reel would not play, because her hand was over the line. Byron held the landing net, while I trembled for my pole, but finally the fish was landed safely. We gave a lecture upon the management of the reel, and she made another cast; this time she held the pole out over the stream, and I tossed the hook in, a trout look the bait and the reel started, and while the flies were dragging through the water, another trout took one of them, and I was then certain that my pole was gone, but fortunately it got off again, when my wife heroically snatched the remaining fish clear out of the water into the boat. I am now convinced that simply because a woman possesses all of the christian virtues, it is no reason why she should be trusted with an Orvis rod.

We went to the house and talked until dinner was announced, and after we finished eating, we ordered our team and drove over to pay a short visit to our old friend Mr. Dan'l Ames. Mr. Ames is one of the old settlers in North Elba, rather a hardman to get acquainted with, but he has a kind, warm heart, a good deal of homor, and a great deal of sound sense, with an unusual attachment to his friends. After our visit, we drove back to the hotel, when I took my rod and went down to where we had left the boat. The sky was a little cloudy, a light wind made a slight ripple upon the water, and the trout bit will the avidity of a New Jersey morqueto. I sat in the end of the boat, and watched the fish jump, oud whenever one a five a nearly as possible where he went down.

Having an excess of time, I humored every fish until it was willing to be landed without a struggle, and too soon had my complement of twelve. These twelve weighed five pounds and seven onnees. While playing with a three-quarters of pound fellow, I noticed a piece of a She made a cast, the pole struck the water and the

of July, by Mr. Charles A. Hull, of Brooklyn, N. Y. The hook was fastened in the upper part of the mouth, and there was no indications of any soreness or disposition to fester, as would have been the case with any of our warm-blooded, air-breathing animals.

With the exception of the two small trout taken while Mr. Cameron was getting the boat, all of these fish came from the same spot, and when they were brought upon the table, some of them had perfectly white flesh, while others were a deep salmon color, and I should like very much to have some one give the reason for this difference in the color of the meat. I hardly think that the difference in the color of the bottom of the stream, and a difference in tool can account for it.

After a pleasant night's sleep, entirely free from mosquetos, Saturday morning came, clear and warm. We ate our last breakfast, settled our exceedingly moderate bill, and with good wishes from all, we drove four miles to Saranae Lake, thence down the Saranae River to Franklin Falls, then to French's for dinner, and a couple of hours' rest, and then home a little before 5 o'clock, where we found everything well, except that we had carelessly shut our bird dog in the parlor the night before we started, and he literally tore into shreds a set of elegant lace curtans, given to my wife this spring.

It is well we did not discover the loss before we left, as it would at least have marred our trap, and doubtless the servants think it lucky for them, that we, and not they, are responsible for the damage. Should any of your readers really wish a little reasonable fly-fishing. Mr. Cameron would be glad to see them, and unless their experience should be very different from ours, he will succeed in making them regret the necessity of having to leave, such rare sport, and such pleasant generous enter-tainments.

## MR, SQUIRES ON "DITTMAR POWDER,"

NEW YORK, Sept. 15th.

New York, Sept. 15th.

Editor Forest and Stream:—

It would seem that it would be the part of wisdom on the part of the Dittmar Powder Manufacturing Company to seek rather to avoid controversy with me than to invite it, because they must know that in the end this course will be fatal to them. Their attempt to divert attention from the real matters at issue by personalities will not work in this case, and so I leave all that and come directly to the only question in which you and all sportsmen are interested, is "Dittmar Sporting Powder" safe? Not whether it is as good as, or better than, black powder; not whether one man has made attempt to impair its efficiency by careless loading; not whether it is made by Carl Dittmar in 1575 or 1870 or 1870 not whether it is taken out of a red can with a strip of paper over the top, or a black one with two labels pasted on the sides. These are not what we want to prove. The question is, is "Dittmar Sporting Powder" a safe compound to use in gune?

I have many letters in my possession which record accidents of the most deplorable kind with this powder. And just here it should be understood that the letters of compliant about this powder which have found their way into the sporting papers are but a fithe of the whole number of such letters received by the manufacturers. I have in my possession more than one hundred such letters from responsible parties, and if you wish I can furnish them to you for publication. Here is one account sent to me by the cashier of a large Pennsylvania bank—a man of respectability and character. He says:—

"I saw a gum burst to smitherens by three and a half drachms of Dittmar Powder. The barrels were completely torn from the stock, and the breech of the right barrel for three or four incless burst and curled completely over the other. The shooter made a miraculous escape from serious injury. The gun was not an old one, and was by a good and well known American maker. I must confess I am afraid to use Dittmar. The powder was new and not the first k

your life?

A word as to myself: For more than a year I was de-ceived in reference to this compound, and recommended and sold it. For another year I have simply in public

kept silence regarding it, because, while I knew its frequent disastrous results, I did not know enough of the principles of its action to assume the responsibility of doing more. But now and from henceforth I am no longer ing more. But now and from henceforth I am no longer in the remotest degree to be held responsible. With the present manufacture I have nothing to do: my interest is in the powder made by Mr. Dittmar and turned over by him to the company with which I was connected, to be sold by them. And I warn every man who is not fully prepared at any moment to part with his favorite gun and his hand, or perhaps his life, to let that "Dittmar Powder" alone.

mar Powder" alone. Henny C. Squires.

'Game Notes.—Rail shooting has been unusually good this season in Connecticut. There was a great flight of birds between the 5th and 10th, and many were killed. Besides the scores already published in Forest and Stheman, we have recently heard of others that deserve mention. Two New Haven gentlemen, during three days, are said to have killed at Essex, Conn., over 1,100 birds. One day's score for one of the party was 248 birds in the tide with but one gun. . . The plover shooting this season in Nova Scotia has not been as good as usual, the country being too dry. . . There was a large flight of golden plover on the Elizabethtown and Newark meadows, in New Jersey, week before last, and many good bags are said to have been made. . . The meadows about Fine Brook, N. J., are too dry for snipe as yet. A three days' storm is needed. . . .Mr. Wells, of Chatham, Ont., has been having moderate shooting on the St. Clair flats. . . .Quail are reported very plenty at East Hampton, Long Island. Ask for Chatles E. Homans; he knows the ground. . . . Few woodcock as yet have been shot in northern New Jersey. The country is as dry as a chip.

OLD FRIENDS AFIELD,—"Guido" has been in the field again, and the local paper has this item: Major S. R. Cruse, Judge S. P. Walker, H. B. McComb, W. A. Wheatley and D. II. Poston have returned, bronzed and muscular, from the Sioux Valley, Western Minnesota, where they bagged 1,500 prairie grouse, 100 ducks and five mule-cared rabbits.

GUNSMITH WANTED .- Our Dubuque, Iowa GUSSMITH WANTED.—OUR DROUGUE, 10WB, correspondent writes that there is a fine opening in that city for a first-class gunsmith. The population is 35,000; there are two shooting clubs, and plenty of work for the right man. We will gladly bring the proper parties into com-

HORNELISVILLE, N. Y., Sept. 20th.—The Hornell Sportsman's Club, now on their fifteenth annual camp at Silver Lake, are having good success. "JORN."

NEW JERSEY.—I 'incentown, Sept. 17th.—You deserve much commendation for the honest efforts you are making in behalf of the sporting fraternity. I have just returned from a trip after reed and rail birds. From the indications at present we shall bag a number of quait this season.

Vermont Shooting.—Plattsbury, N. Y., Sept. 4th.—
I have just returned from a trip to the Willow Bay
House, West Milton, Vt. I bagged in four days, shooting about four hours a day, twenty-one direks. They
were teal, black and woodducks. In the middle of the
day gentlemen can spend their time partridge or woodcock hunting, both birds being very plentiful in the
neighborhood. Good board and use of boats and decoys,
87 a week.

T. B. J.

ELDRED, Sullivan County, N. Y., Sept. 20th.—Partridge and pigeons are unusually plenty here this season.

#### SHOOTING MATCHES.

CAPITAL CITY GUN CLUB.—Washington, D. C., Sept. 19th.—There were but three contesiants shooting for the gold medal Saturday. The result was as follows, Card trap, screened, 20 glass balls Och:-

SEDALIA, Mo., Sept. 14th.—The Sedalia Shooting Club had a regular meeting on Saturday, Sept. 14th; 20 glass balls, 21 yards rise; score as follows, first 10:-

Second 10:-

| Truder. | 010111111-8 | Houston. | 101011010-6 | Patuerjee. | 0101011-7 | Kumm. | 00011101-5 | This club is but recently organized. | Next Saturday there will be a first prize offered. | OCCIDENT. |

VIRGINIA.—The Winchester Gun Club shot again on the 7th and made the following score at 20 glass balls, 18 yards, from Card's rotary trap :-

18 Dr. Miller ..... 20 J. D. Sympson 16 J. W. Paynter 

ALGONQUIN GUN CLUB .- Sept. 3d .- Shooting for a gold badge ALGONQUIN GUN CLUB.—Schl. 32.—Shooting for a gold badge at club grounds, Weehawken, N. J., 20 balls, 3 Bogardus traps, 18 yards rise; Hill 19. Eckstine 20, Brenner 8, Montgomery 15, Male 15, Boessennecker 7, Hanna 17, Longhery 13, Murphy 8, Lundie 16, Simpson 8, Auld 14, Keller II. The members afterward partici-pated in pigeon shooting, 21 yards rise: Murphy 5, Callery 3, Shunseith 5, Auld 3, Boessennecker 3, Keller 4, Brenner 3, Long-hery 4, Tyler 4, Hanna 5, Male 5, Moylan 4, Simpson 4, Hill 5.

FOUNTAIN GUN CLUB.-The Fountain Gun Club, which holds the three Slate Association prizes, won at Seneca Falls, has taken time by the forelock and begun a training for the contest next year. One of the members of the club has given a \$100 Parker 12-gauge gun, made expressly for the occasion, to be contended E-gauge guin, made expressly for the occasion, to be commence for in mouthly contests. The first match came off last week, Wednesday, nearly 300 persons being present, and 137 members shooting. The conditions were 7 birds each, H. and T. plunge traps, handleap rise, 50 yards boundary, State As ociation rules. The undority of the shooters withdraw on missing a bird. The result of the contest was; Seventeen killed 7 straight, 13 killed 8, 14 killed 5, 11 killed 4, 9 killed 3, 24 killed 2, 25 silled 1 and 24 missed the first bird. The tree on 7 each were then shot off, miss and out, and the shooting, which commenced at 11 o'clock, was not concluded until it was too dark to see any but light colored birds,

there fortunately being enough of such birds to be picked out. In all cases where the shooting was by substitute, the rise was that of the shooter. The following are the details of the ties of 7

minutes.

As the afternoon progressed, the shooters made up what they called the lightning squad, composed of Messrs. Chappell, Wingert, Madson, Baylis, Taibot, Dr. Willard and others, Abel Crook, Esq., acting as referee, who insisted that the shooters should all take their seats on benches, with ammunition ready, and if a man failed to be present at the score, he lost his bird. The result was that it was almost like shooting double birds, many times two birds droungers at time. Sometroon we about the interests. birds dropping at a time. Seventeen men shot out their score in 49 minutes, with only two plunge traps to shoot at and every man handicapped from 35 to 30 yards.

# CRITICISING JUDGES.

HE disappointed exhibitor is a hard man to deal with. He comes to the show confident of victory, and when defeated dilates with energy upon the incompetence of the judges; and for the sake of pacifying him his friends agree with him that he certainly has the best dog in the class. Of such a stamp is the writer of the following letter to the Toronto papers :-

following letter to the Toronto papers:

Sir:—Would you permit me to make a few remarks on
the late dog show at the present Exhibition. I should
have done so before, but have been waiting in the hope
that a more competent pen than my own would have
drawn attention to the glaring incompetence of some of
the so-called judges. At present I will only instance two
cases, although I am prepared with many more, and I
take these two as they were the ones my attention was
first drawn to.

We first case is that of two Yorkshire terriers (a dog and

take these two as they were the ones my attention was first drawn to.

My first case is that of two Yorkshire terriers (a dog and a bitch), shown by a well-known resident of Tounto. The dog was imported from England, and was a very fine specimen of its class. The bitch was out of a Scotch terrier (bred in Canada), and by the aforementioned dog: but, oh! sapient judge, why should you have not in any way noticed the dog and yot elect the bitch as a recipient of a second prize, unless it was from a strong and most loyal dislike to seeing your country second in anything? But even in cases like this, I would humbly suggest that loyalty should give place to justice. I now come to a still more remarkable case. A very fine rough-coated St. Bernard bitch, off color (she was classed among the mastiffs last year), was looked upon with contempt. From the face of the judge there appeared to be a vague uncertainty and remarkable indecision as to what she really was. There was no doubt he had come to the conclusion that she was a bitch, but ast owlat kind of a bitch she really was seemed to be too much for him. But, glancing at his list, and comparing the other two animals in the same class with her, no resemblance was observed. I know for a fact that this bitch was of Russ, out of Mont Blanc, and that her own brother gained the first prize at the great dog show at Birmingham, England, in 1875.

in 1875.

I would like to instance many other cases, but a regard for the feelings of the judges, and an unwillingness to occupy more of your valuable space prevent me.

Yours, etc., A DEMORALIZED DOG ADMIRER,

Toronto, Sept. 13th.

There is no attempt made to show that the judge made any error in placing dogs in front of the Yorkshire terriers as they are called, nor in the case of the St. Bernard either. It is only the vague fault-finding communication of a disappointed exhibitor, who has only made matters worse for himself by proving himself capable of asserting untruths. The terriers which he calls Yorkshire, were exhibited in "Class 32, rough terriers, other than Yorkshire." A nice thing that to enter dogs in the wrong class, and then find fault with the judge. But the joke comes in when he says the bitch was out of a Scotch terrier; a pretty stamp of Yorkshire terrier that,

We now come to a still more remarkable case. . The letter writer proves his ignorance of dog show rules, and of dog breeding in the case of the terriers, and when it comes to the St. Bernard he states as facts things which have not the slightest foundation in truth. He says the bitch's brother took first prize at Birmingham in 1875, This is false, as no dog or bitch by Russ, out of Mont Blanc ever won a first, second, or third prize at Birmingham, nor for that did one of that pedigree ever win at a show registered in the Kennel Club Stud Book. It is a matter of very great doubt, indeed, whether the bitch shown at Montreal was by Russ out of Mont Blanc, because she has not a single characteristic of a St. Bernard about her. Small in size, black and white in color, and with a snipy head, she certainly looks like a cross-bred dog, with a touch of colley in shape and size, and of Landseer Newfoundland in color. Such a letter as the above should never have found its way into print, but since it has, it is only right its inconsistencies and false hoods should be exposed.

#### DOG BREAKING.

FROM VERO SHAW'S ILLUSTRATED BOOK OF THE DOG.

[Reprinted from advanced sheets forwarded to the FO. AND STREAM, by the author, through the courtesy of Messrs sell, Petter, Galpin & Co., Publishers.]

CHAPTER XXXVIII

Breaking Sporting Dogs.

From almost time immemorial dogs have been the chosen companions of mankind in their pursuit of game. Under any circumstances, it was necessary to educate the dogs in the duties they were required to fill, and it is with this subject that we have now to deal.

It is of course impossible to conjecture how the capacity

of each breed for working game came to be displayed in the first instance, but the fact remains that from very very early times indeed many breeds had each their re-spective duties in the field, as they have in the present day.

one of the earliest evidences of the fact that the art of training dogs is by no means a modern one, will be found in the following curious agreement:—

training dogs is by no ineasin a modern one, will och roma in the following curious agreement:—

"I, John Harris, of Wildon, in the Parish of Hastlebury, in the County of Worcester, yeeman, for and in consideration of ten slillings of lawful English money this day received of Henry Herbert of Ribbesford, in the said county, esquire, and of thirty shillings nore of like money by him promised to be hereafter pay'd me, doe hereby covenant and promise to and with the said Henry Herbert, his executors and administrators, that I will from the day of the date hereof, until the first day of March next, well and sufficiently mayntayne and keepe a Spanish bitch named Quaud, this day delivered into my custody by the said Henry Herbert, and will before the said first day of March next fully and effectually trayne up and teach the said bitch to sitt partridges, pheasants and other game, as well and exactly as the best sitting dogges usually set the same. And the said bitch so trayned and taught, shall and will delivere to the said lenry Herbert, or whom he shall appint to receive her, at so trayned and taught, shall and will delivere to the said Henry Herbert, or whom he shall appint to receive her, at his house in Ribbesford aforesaid, on the first day of March next. And if at any time after the said bitch shall for want of uso or practise, or otherwise, forgett to sett game as aforesaid, I will at my costes and charges mayntayne her for a month or longer, as often as need shall require, to trayne up and teach her to sett game as aforesaid, and shall and will fully and effectually teach her to sett game as well and exactly as it is above mentyon'd. "Witness my hand and seale the day, and year first above written.

"Juny Harris big X mork

"JOHN HARRIS, his X mark.

"Sealed and delivered in presence of,
"H. PAYNE, his X mark,"

Gervase Markham, however, previously to this, had alluded in his work, "Hunger's Prevention, or the Art of Fowling," to the taking of partridges with the setting

Gervase Markham, however, previously to this, had alluded in his work, "Hunger's Prevention, or the Art of Fowlung." to the taking of partridges with the setting dog, in the following words:—

"The fourth and last way for the taking of partridges (and which indeed excelleth all the other for the excellency of the sport and the rarenesse of the art which is contained therein) is the taking of them with the setting dogge, for in it there is a twofold pleasure, and a twofold art to be discovered, as first the pleasure and the art proceeding from the dogge, and is contained in this manner of ranging, hunting and setting, and then the pleasure and art in the bird hunted.

Being come into the fields or hunts where partidges doe frequent you shall there cast off your dogge, and by crying 'Heyret' or 'Hey-whir,' or such like words of encouragement, according to the custome of his own nature or education, give him leave to raunge or hunt, which as soone as hee beginneth to doe, you shall then cease from any more words, except any fault or mistaking enforce you, and then you shall use the words of correction or reprehension due for that purpose, and in all his hunting and labour you shall have great and speciall heede that hee never range too faure from you, but beate his ground justly and even, without casting about or flying now here and now there, and skipping many places, which the heate and mettall of many good doggs will make them do if they be not reprehended, and therefore when any such fault shall happen you shall call him in, and with the terror of your countenace so threaten him, that he shall not dare all that day after to doe the like.

Now if in this ranging and hunting you chance to see your dogge to make a sudden stop, or to stand still, you shall then presently make in to him (for he hath set the partridge), and as soone as you come to him you shall bim goe nearer, which if he deey ou shall still say to him, 'Go nearer,' phich if he deey ou shall still say to him, 'Go nearer,' phich if he deey out shall

The above quotations prove that the breaking of field The above quotations prove that the breaking of field dogs was carried on in very much the same manner 200 years ago as it is in the present day, though the tactics of sportsmen are materially altered. As will be seen from Gervase Markham, the birds were surrounded by a net, and the object of the hunter was to prevent their rising, but the duties of the setter is by no means greatly changed by the march of civilization.

Upwards of a hundred years before the date of Gervase Markham's work, Dr. Caius refers in his book to the taking of birds in the net in the field, and distinctly alludes to the trained setting dows used in the sport which he

to the trained setting dogs used in the sport which he classes with the spaniel, and notices, under the name of

Index.

Having thus shown that the art of training sporting dogs is not entirely due to its modern exponents, though it has naturally been reduced to a science by them, we propose laying before our readers some hints from the pen of Mr. James Fletcher, of Glenmarkic Lodge, Huntley, Aberdeenshire, N. B., whose experience in breaking operations is both practical and extensive.

(To be Continued.)

Dog Breaking .- We publish this week the first of the chapters of Mr. Vero Shaw's "Book of the Dog" on this subject. Advance sheets have been forwarded by Mr. Shaw exclusively to the FOREST AND STREAM, and others will follow. For this high compliment to ourselves and courtesy to our readers we take the first opportunity to express our appreciation and indebtedness.

ACCIDENT TO REX.—All lovers of a good dog will learn with regret of the misfortune which has come to the champion pointer dog Rex, the property of Mr. Fisher Howe Jr., of this city. Through the gross carelessness of a well-known handler Rex was struck by the locomotive of an express train, the result being a badly broken shoulder and a compound fracture of the left fore-leg, The circumstances of the case, are extremely distressing, as Mr. Howe was about entering Rex for competition at the St. Louis Bench Show, and supposed that his famous dog was in his best show form. It appears, however, that Mr. Howe was kept in ignorance of the fact, and the broken leg allowed to knit without the proper surgical care. Let this misfortune to this splendid dog act as a warning to all sportsmen to whom they intrust their dogs.

From this brief mention of the occurrence, sent by Mr. Howe, we judge that the dog will never again be fit for either field work or the show bench. Rex has been so frequently mentioned in our columns and has centered so much attention upon himself at the bench shows in this and other cities that further mention of him seems superfluous.

Reference to our files and to the catalogues shows that Rex has been repeatedly placed in the front rank by the votes of such critical judges as Messrs. Davidson, Saltus, Hammond, Colburn, Wise, Dr. Jarvis, Mr. Chas, H. Ray mond, Mr. Hugh Dalziel and others. It is to be hoped that the injuries will not result fatally, for as a stud dog his superior breeding, fine form and field quality, should make Rex still one of the most valuable heavy pointers in the East.

in the East.

Canadian Kennel Club, similar in all respects to the National American Kennel Club, similar in all respects to the National American Kennel Club in this country, is an event worthy of the attention of all sportsmen on both sides of the line. It points to the large increase of dog men in the Dominion, and the consequent necessity of establishing an association that will be looked up to as a power in the land. The initial meeting took place at the Rossin House, Toronto, Ont., last week, when the following well-known gentlemen were present: Messrs. L. H. Smith, Strathroy; Dr. Niven, London; R. Tanning Jr., John Maughan, J. Spooner, C. A. Brough, J. B. Bormer, Bruce Macdonald. A. J. Robertson and Leslie, Toronto. On motion, Mr. Smith took the chair, and Mr. Bormer acted as secretary pro tem. After an important discussion as to the advisability of forming a club, it was moved by Mr. Leslie, and seconded by Dr. Niven, that the club be called "The Canadian Kennel Club," which was adopted. The election of officers was then proceeded with, with the following result: President, Mr. Christopher Robinson, Q. C., Toronto; Vice-President, Mr. L. H. Smith, Strathroy; Secretary, Mr. A. D. Stewart, Toronto; Treasurer, Mr. J. M-sughan, Toronto. Committee, Dr. Niven, London; Mr. Wn. B. Wells, Jr. Chatham; Mr. R. A. Lucas, Hamilton; Mr. J. Spooner, Toronto, and Mr. F. Austin, Ottawa. Mr. Spooner was appointed chairman of the committee. The President, Secretary and Treasurer were appointed a committee to fill any vacancies which may occur in the officers selected.

PENNSYLVANIA FIELD TRIALS.-Mr. J. R. Stavton, Secretary of the Pennsylvania State Field Trials. Association has notified us that the dates of the meeting will changed from Nov. 9th to the 26th, 27th, 28th and 26 of October, thus bringing the event two weeks earlier.

NEBRASKA FIELD TRIALS.—The executive committee of

assigned them, and no one need fear anything but justice and fair play at their hands. Entries will be received up to the evening of Sept. 29th, and not to Aug. 31st, as stated in the programme. Gaine is abundant in the vicinity where the trials are to be held, and a good attendant in the vicinity where the trials are to be held, and a good attendant is described asserted. cinity where the trials ar dance is already assured.

J. C. McBride, President,
J. H. Harley, Secretary,
George M. Mills,
Executive Committee,
Both Mr. Satterthwaite and
Mr. Lewis declined.

Both Mr. Satterthwaite and Mr. Lewis declined.

The Colley Trials.—The international sheep dog trials, held under the auspices of the Pennsylvania State Agricultural Society, at Philadelphia, were began on Tuesday of this week, the management being under the personal direction of Dr. L. A. Twaddell. In our next issue we will give a full description of the trials, as our kennel editor is at present in Philadelphia attending them. The entries, with the name of the owner, as well as that of the dog, are as follows: John Bickney. Philadelphia, dog. Joe; George Aitkin, Northport, Suffolk County, N. Y., Shepherd Lass and Clyde; George Taylor, Philadelphia, dog Shep: Charles Pugh, Philadelphia, dog Tone; S. Sharpless, Philadelphia, Gipsey; T. S. Cooper, Coopersburg, Pa., dog Oscar: Dr. J. W. Downey, New Market, Md., Lady Scotland and dog Tweed Second; John McAnally, West Philadelphia, Go Shep. In the puppy class T. S. Cooper enters Fannie; George Aitkin, Young Carlisle, and Dr. J. W. Downey, Lady Scotland.

ESSEX COUNTY HUNT.—Meets for September, 1880: Saturday, Sept. 25th, at 5 p.m., at cross roads, Orange, near St. Mark's Church, Wednesday, Sept. 29th, at 5 p.m. Wright's Hotel, Montelair. F. M. Wheeler, M. F. H.

GORDON SETTER PUPPLES.—A gentleman advertises a litter of Gordon setters by Glen out of Belle for sale. Belle is an imported bitch, the winner of two firsts in Ireland, and Glen won in the Brace Stakes of the Eastern Field Trials last year. The pupples are a promising lot, so far as looks go, and they can hardly fail to be good in the field.

Kansas Field Trials.—Mr. A. C. Waddell, of Topeka, Kansas, writes us that nothing has been arranged about the Kansas Field Trials.

#### KENNEL NOTES.

Whelps. - Ruby 11. - Mr. H. B. Richmond's (Lakeville, Mass WBLIPS.—Ruby II.—Mr. H. B. Richmond's (Lakeville, Mass, pointer bitch Ruby II, whelped, Aug. 28th, twelve puppies, seven) dogs and dive bitches, by his Snipe-Sensation, Colburn's Belle. Hessie—Mr. H. B. Richmond's English setter bitch Bessie whelped, Aug. 31st, nine puppies, six dogs and three bitches, by Oakes' Dash III-Dalsy Dale. Dell—Mr. J. J. Jumelle's (Dequoin, III) Dell-Champion Duck, whelped eight puppies, three dogs and nive bitches, to owner's Elche Ti; all solid deep red color. Queen à Scots—Mr. A. M. Waddell's (Louisville Ky.) bitch, Queen o' Scots, Gladstone-Mersey, whelped, Aug. 18th, eight puppies, four dogs and four bitches, color white, and white and black; to Lincoln. Grattlade—Mr. A. M. Waddell's fexhound black for thinds whelped, Aug. 2d, three pumpies two white and black, to Lincoln. Gratitude—Mr. A. M. Waddell's foxbound bitch Gratitude whelped, Aug. 2d, three puppies, two bitches and one dog, color white, black and tan, to Chorister. Gratitude was bred in England.

SALES.—Queen Mah and Glenco—My. Arnold Burges has sold his champlon Queen Mab to his brother, Tristam Burges, of San Fran-cisco; also Glenco, by champlon Rob Roy, out of Davidson's Doll (sister to Druld), to Dr. Sullings of Kalamazoo, Mich.

DEATH.—Duke.—Brooklyn, N. Y., Sept. 13th, 1859.—On Friday last I lost, by discemper, my Gordon setter Duke, out of the late Mr. Tileston's Lou, by Jerome Marble's Grouse. When seven months old, he took first prize at Westminster Kennel Club show, 1879, and again was awarded H. C. at the last show, where many other and older prize winners were unmentioned. Duke was the 1879, and again was awarded H. C. at the last show, where many other and older prize winners were unmentioned. Duke was the fastest dog in the field that I ever knew, and that quality, combined with a very keen nose and beauty of form, rendered him a very valuable naimal. I had anticipated having royal sport with him this fall, but his death leaves me now without any dog whatever, and I know I shall have great difficulty in replacing him, as dogs like him, combining exceptional field and bench qualities, are not to be found easily.

W. H. HENTINGTON.

# The Rifle.

#### THE CREEDMOOR FALL MEETING.

CREEDMOOR during last week was a busy place in the conduct of the Eighth Annual Full Prize Meeting. In general it passed off very successfully, though there was the usual amount of growling in cases where the good of the many seemed to trample on the rights of the few. "There were not pool targets cough" is the verdict of so many that it would seem well founded, and it does certainly look a little like bad management. where a contest such as the champion's has its stages two days apart on the programme. There was good shooting weather from the start, and no delays were chargeable to the elements. Col. Bodine, while nominally the executive officer, had much aid from Col. J. G. Story, who was the virtual controlling spirit of the on. 3. O. Slody, who was the retrient continuing spirit of the meeting. The matches were in general well distributed, and the almost entire absence of protests bears testimony to the fairness of the contests. The rule about challenged shots should be a definite one, and to change it from one day of a meeting to another is NEBRASKA FIELD TRIALS.—The executive committee of the Nebraska State Sportsmen's Association, have nominated the following gentlemen for judges of the field trials to be held at Millford, September 30th, October 1st and 2nd, 1880. All Age States.—C. F. Lewis, Hon. Geo. B. Lake, of the Supreme Court, and Hon. B. E. B. Kennedy, Omaha. Puppy Stakes.—F. Satterthwaite, Hon. Charles P. Matthewson, Speaker of the House of Representatives, and Hon. S. M. Chapman, of Plattsmouth. Charles P. Matthewson, Speaker of the House of Representatives, and Hon. S. M. Chapman, of Plattsmouth. States and Hon. S. M. Chapman, of Plattsmouth. The Charles against the second of the was clearly on the Merch Stakes.—Henry Miller, Esq., of Corning, Iowa; Nathan Doexy, Esq., of Geneseo, Ill., and Capt. E. S. Hawley, of Nebraska City, Nebraska City, Nebraska City, Nebraska City, States of Chapman, of Plattsmouth. The committee desire to assure the owners of dost the committee desire to assure the owners of dost that the gentlemen named for judges are thorough sportsmen, and fully competent to act in the capacity

meeting in a pitiable plight, and enough in condemnation canno meeting in a pitiable plight, and enough in condemnation cannot be said of a State management that permits an important match such as the international military to go by default, through mere spathy, if no worse motive be ascribed. This and other matches have shown conclusively that the troops of the State are arread with an inferior weapon as compared with the rides which have since been by might out. This may, perhaps, be a necessary result of the general march of improvement, but it is none the loss dispiriting to members of the State organizations to feel that they carry about an antiquated fire-arm in comparison, with others. This meeting has more than ever impressed the fact that a 50 caliber vitle has no manner of chance against one of .45 or .44 caliber with increased charges. her with increased charges.

her with increased charges.

The anceting has given chance for no small amount of instructions to a good many men. The regulars go back to their several posts encourared by their success, and their stay at Greedmoor has been really a season in a school of musketry. The millitanean of many parts of this State, and from the several States represented at the meeting, have discovered that there are plenty of lovers of rifle practice, and, if the proper moral is drawn, there should be an endeavor on the part of many of the other States, not now represented, to make showing of volunteers.

The meeting occurred four days and the 20th distinguished.

should be an endeavor on the part of many of the other States, not now represented, to make showing of volunteers.

The meeting occupied four days, and the 2,000 individual entries poured in a steady fusilade against the targets. It is peaks much for the good arrangements of this leading American range, that not a person was burt in any way, not a bullet went awry, and not even the usually careless marker was cut by a bullet-splash. The first day was opened with short range practice, and the Judal Match was the first event. This being for military rifles, there was a short struggle between the citizens and the regular soldiery. The day was a raw one, with a provoking II o'clock wind and a had light, with the sun only at occasional intervals peeping from behind a sky of leaden clouds. The honors were very evenly distributed, and for the first place J. L. Paulding, of the Twelfith Regiment, N. G. S. N. V., tied with III. Weisman, of the Twelfith Regiment, N. G. S. N. V., tied with III. Weisman of the First United States Cavalry and a member of the Pacific team. On the shooting off of the tie Paulding was the winner and took the 550, cash, prize offered by Major J. H. Jones of the same regiment. This match was instituted at the first meeting of the Association, and has been sustained since. The successive winners have been: 1874, W. Koberson G shots, old targets, 157, 1874, II. II. Smith G shots, old targets, 23; 1875, II. Moson, 30; 1876, F. J. Falgroff, 34; 1877, E. W. Whitlock, 35; 1878, II. Moson, 35; 1879, III. R. Smith G shots, old targets, 23; 1878, III. Moson, 36; 1879, III. P. J. Paulding, 3544415—31] I. T. J. Clar. 444544—30

The Chempion's Match set the	tine small-hore men to work

The (mampious Marca section line smart-ore men to work who began putting in the scores at the short range to help on the sgregate for the match. This match was established in 1876, and its record is a very good one, standing:—

Year.	Winner.	200		1,000	Total
1876	E. H. Sanford	42	47	44	133
1877	H. Fulton	47	49	43	139
1878	W. M. Farrow	46	47	46	139
1879	J. S. Sumner	42	49	50	141

Being disjointed in the year's programme, many who shot he early stages did not attend to the finish, but of those com-betton their groups the record shows:—

The afternoon of the first day was given up to mid range practice, and the 19 teams of the Army and Navy Journat Cap Match mades a flee showing across the range. The weather conditions had not improved, and the scores represent really good work. The cup came very near going out of the list of fatures, for the Seventh lave aiready taken the cup twice, and had high hopes of getting it for the third and last time. Their team has been practicing with the greatest zeal, and some remarkably fine practice scores have been made, but some of the members of the team went to pieces, and their chances were lost. The United States Dagineer Battailon team came to the firing point with any number of adjuncts in the way—a flying kite, an indicator for the The afternoon of the first day was given up to mid range pracbugmeer partament can came to the pring point with any pum-her of adjuncts in the way—a flying kite, an indicator for the velocity of the wind, a delicately hung balance to show the di-rection of the nickle element, and other prederives very excellent for private practice, but seemingly of no special weight against the tribute planement of wind which the "Woodchuck Hunters" the state of the wind which the "Woodchuck Hunters" the trained judgment of wind which the "Woodchuck Hunters" from Watertown, N. Y., were enabled to bring to their work. This match dates back to 1875, when the Twenty-second Regiment took it from 9 teams with 211, each man firing 5 shots at the old targets. In 1874 the Seventh Regiment took it from 16 teams with 247, with 7 shots per man at old targets. Since that time the conditions have been as now, and the record has shown: 1875, Second Connecticut Regiment, 206-15 teams; 1876, Seventh Regiment, 330-16 teams; 1876, reventh Regiment, 325-17 teams; 1876, Pervenited Separate Company, 351-18 teams. The present year's scores stand:—

The second day was a military team day, and while the day was not by any means a destrable one, with its cold and cheerless attamospheroand unsteady wind, the men were able to master these difficulties and turn out good work. The opening contest was that for the State trophy intended to try the skill of the State regiments. An examination of the scores will show the ups and downs of the battle, but the "Woodchuck" mon had learned to handle wind skillfully by practice on their range enear Watertown and though closely pushed they again scored a declard victory. This match has a history since 1873. In that year the Twenty-second Regiment tookit with 250 points, 6 shots only being fired by each man at each range; 15 teams then competed. With 18 teams in 1871 the conditions were made as now. The winnings have been: 1875, Seventh Regiment, 33—18 teams; 1875, Forty-cinft Regiment, 30—16 teams; 1875, Fourteenth Regiment, 30—16 teams; 1875, Seventh Regiment, 33—18 teams; 1876, Twentieth Separato Co., 459—20 teams. The scores for 1830 stand:—

7664-0	the day previous; this permitted teams from any State or Totory of the Union. In the bad light and unstable wind of time the scores were not extra fine, but New York State rece a defeat of a very emphatic sort. This is encouraging, and sl	erri- that ived
	that throughout the Union rifle shooting is spreading, and outside of and beyond the Regular Army an armed force is for defense, or, it may be, for offense. This important m runs back to 187a, when the ranges were 200 and 400 yards since that time they have been as now 200 and 500 yards. V	ateh , but

	Total	ie a
	Hilton trophy, and the match narrowed itself down to a con- between 3 teams of regulars for first place. Now Jersey, c necticut and Pennsylvania took part in the race, but were left behind by the superior system and opportunities for practice the regulars. The men from the Division of the Missouri ur	far
	Major Geo. Shorkley secured such an advantage on the lead ranness that they were assured of success, even though the lantic team didlead by a few points in the 650 yards shooting. This match dates back to 1873, when Judge Heary Hilton, h ing offered a very handsome trophy, the match was instituted. 'conditions have not been changed, and the record of the mat stood:—	At- av-
	1878.         200         500         600           New York.         317         317         370         370           Connecticut.         315         30         32         32           New Jersey.         328         301         227           Division of the Missouri.         303         276         224	tal. 1044 963 861 803

The match for the military champith its 2 stages and 6 ranges to hrough the whole meeting and reshe regulars. It is the duplicate of ion, and in proportion to numbers ably with it. This, too, is a contest	be shot over ulted in a gen the Queen's F engaged will dating back	, was scatt eral victor; rize of Win compare fa to 1878, an	tered y for able- ivor- d in

that year C. H. Eagle of the Seventh regiment N. G.S. N. Y., took that year C. H. Espie, of the Seventh regiment N. G. S. N. Y., took the first staire with 29 at 200 yards, 20 at 509 yards and 29 at 400 yards, total 87, while Corpil. J. S. Barton, of the Forty-eighth regiment N. G. S. N. Y., took the second stage with scores of 31 at 850 yards, 23 at 909 yards and 18 at 1,600 yards, total 77. INTO was a favorable time for regulars, and at the first stage E. P. Wells, of the Second Infantry U. S. A., took the first stage with 30 at 500 yards and 33 at 900 yards, total 93. The second stage went to Lieut, G. N. Whistler, of the Fifth Artilley, with 20 at 800 yards, 23 at 800 yards and 20 at 1,000 yards, total 75. The scores in full of the year stood as follows:—

200 Yards, 500 Yards, 600 Yards, 600 Yards, 70 tatel, 484452—27 (585454—24) (585555—31)

Some objection was me	ide to the t	aking of th	e second st	age by

S. H. Day, as he fired first at 1,000 yards and then came back to S. H. Day, as he hired hirse at now yarms and their came tack to he lower ranges. At the time the match was fired at long range he was firing with the division of the Atlantic team at the mid ranges, and it looks very hard to expect him to shoot at two places at one and the same time as laid down in the schedules of matches. The scores of the match stood:—

In order not to make the Running Deer corner of this range wear a book of activity, a special match at \$0 yards was arranged for a 22 caliber Ballard Ritle, presented by Messrs. Schoverling, Daly & Gales, 84 Chambers street, New York. Open to everybody; any rille with open sights; position, standing; four runs in each entry, one shot each run; entries unlimited. The compelitor making the highest aggregate score of any two entries to win the rille. The small heart of the deer counted 4 in this shooting, and the best score of each contestant stood as follows:—

Brunds 1st, 2d, 3d, 4th.

Rounds 1st, 2d, 3d, 4th.

New York Schuetzen Cores' Fall Mering.—The annual fall shorting festival of the New York Schuetzen Corps was beld at Thompson's Pavillon, Highlands of Navesink, Sept. 4th and 15th. About 150 members, with Major Goo. Any in command, left New York, Tuesday 'morning, on the steamer Sea Bird for the Highlands. As they lifeft, the, wharf, salutes were fired, and the bland played a lively airas they steamed down the river. After a pleasant sail they arrived at the hotel and were welcomed by Mr. Thompson and then marched in to dinner. After dinner the addes retired to the bowling alley, where they contested for the prizes offered by the corps. The gentlemen marched to the rifle range and commenced the shooting.

On Tuesday evening, after supper, there was a ball, and dancing was kept up till early morning. The bowling match kept the ladies busy Tuesday afternoon and Wednesday morning. There were 43 prizes. The scores and prizes of 10 of the most expert bowlers were as follows: To Mrs. Brummerhoe, who marie a score of 51, a slik parasof; Miss Annie Heiner, 43, an album; Mrs. Alliands, 33, an ebony comb and brush; Mrs. Harcaburgh, 37, a fewel case; Mrs. Lippold, 33, an ebony comb and brush; Mrs. Harcaburgh, 37, a livel to Market? Mrs. Springmoyer, 33, a toleto basket? Mrs. Liproce and brush; Mrs. Huser, 33, a basket and a half dozen silver knives and forks; Mrs. Springmoyer, 33, a toleto basket? Mrs. Liproce comb and brush; Mrs. Huser, 33, a basket and a half dozen silver knives and forks; Mrs. Springmoyer, 33, a toleto basket? Mrs. Liproce comb and brush; Mrs. Huser, 33, a basket and a half dozen silver knives and forks; Mrs. Springmoyer, 33, a toleto basket? Mrs. Liproce comb and brush; Mrs. Huser, 33, a basket and a half dozen silver knives and forks; Mrs. Springmoyer, 33, a toleto basket? Mrs. Editie Klein. 29, a silk umbrella; Thirty-three jother ladies took belts, recic won a fewel case

Fifty men shot on Tuesday, when it became too dark for the cst to shoot, so they shot Wednesday morning. There were 30 prizes. \$10 in currency; George Aery, 111-16, cask of ale; A. K. Schoppenburgn, 12 10-16, case of brandy; John H. Meyer, 12 11-16, \$10 in
currency; G. Menken, 132-16, case of brandy; Henry Evers, 13
-16, case of brandy; William Henryken, 13 11-16, one dozen bottles of Khine wine. The rest taking prizes of \$5 each.

After the corps shoot the judges shot for a handsome medal ther the corps shoot the judges shot for a handson he had been ted by Major Aery, which was won by Mr. Henry D. Rott in. The badge presented by Forest and Stream, for the mann. The budge presented by FOREST AND STREAM, for the best shot that had never won a prize, was won by the originator of the corps Ex-Capt. Herman D. Busch. Capt. Busch organized the N. Y. Schutezen Corps in 1857, and spent both time and money to make it a permanent organization, and most of the crack shots of the corps of to-day were taught how to shoot by Capt. Busch. The Captain is a good shot, and the only reason he has never won

The Captain is a good shot, and the only reason is ease that a prize before is because he never shot for one.

The piu presented by FOREST AND STREAM for the lady who caught the most fish in the fishing march could; not be tished for owing to the bad weather; on account of this the committee detided it should be bowled for, each lady being allowed three balls. the trophy was awarded to Mrs. Hilderman, who achieved a score of 23. Mrs. John Suhr, Mrs. Wendt and Mrs. Geo. Ort received smaller prizes.

The corps left for New York at 5 P.M., Wednesday, and arrived

The norps left for New York at 5 p.M., Wednesday, and arrived in the elty much the better for the trip.

Major Aery and his assistants deserve great credit for the way they managed the festivities, and all united in giving three bearty cheers for Major Aery and the N. Y. Schuetzen Corps.

NATIONAL RIFLE CLUB.—Twenty-third meet.—South Vernon, Sept. The and Shl.—Weather overcast, wind gusty and varying 45 to 90 degs. from the line of firing.

O'der of the day, 3 ten-strings at 220 yards, position and rest unrestricted. Standard weight of rifle barrel 15 pounds, excess handicapped. A prize, pro rata, to each one of the best three of each string. A gold medal to wear and silver medal to keep to the best survents of the three strings.

handicapped. A prize now can and silver mean to accept the best aggreents of the three strings.

Of the 1c competitors we give the respective scores of the winners in inches, 8th and 16th, measured from center to center.

First string—D. A. Brown, Massachusetts, 10 70, 6th et prize;

John Williamson, New York, 14 0, second prize; H. J. Huntoon.

Vermout, 15 30, third prize. Second string—D. A. Brown, 1000, first prize;

Milliamson, 10 5 0, accound prize; W. D. Craft, New York, 11 0 11, third prize. Third string—D. F. Fletcher, Vermont, York, 11 0 11, third prize. en, Vermont, 14 5 0, third prize.

Best aggregate—D. A. Brown, 32 7 9, medals.

Next meet at same place, last Tuesday of August, 1881. J. Williamson, President, and N. S. Brockway, Secretary, reflected.

THE OHIO STATE ARCHERY ASSOCIATION.

SECOND ANNUAL TOURNAMENT.

THE second annual tournament of the Ohio State Archery As THE second annual tournament of the Ohio State Archery Association took place at the Zolioigical Gardeu in Cincinnstion the 25th, 28th and 27th uit. The following clubs participated, Westwood Archery Club, of Westwood, Sagittarus, of Walnut Hills; College Hills, of College Hill; Waverly Club, of College Hill; Highaud Archers, of Wyoming; Robin Hood Archers, of Dayton; Arden Archers, of Marietta; Glendale Archery Club, of Glendale; Merrie Howmon of St. Clair, of Exton; Mt. Auburn Archers Club, of Mt. Auburn; Auburn Archers, of Mt. Auburn, The Touched Archers Club, a member of the Association, was

Archery Club, of Mt. Auburn Archers, of Mt. Auburn. The Toledo Archery Club, a member of the Association, was not present to take part in the tournament, but Mr. Smith, one of its memoers, came upon the grounds just before the shooting was over and gave a special prize of five volumes of Ford's book. Seventy-two archers took part in the tournament—twenty-ninc ladies and forty-three gentlemen. The record of last year's tournament shows that nine clubs took part, with fifty-three members. The interest in archery is looking up in the Buckeye State, as is shown by these figures. It was thought last year that the excitement over archery would be like the transient temperance movements which now and then sweep the Ohio Val. ance movements which now and then sweep the Ohio Val leg, of only short duration; but it seems now, that its coming was more like the dumb ague, whose first appearance in this region was recorded along with John Cleves Symmes' first deeds-

it came to stay.

The increased interest in archery after one of these public meet The increase interests in aronery attered these points meetings is sufficient evidence of their bonelicial effects. However badly one shoots at such a meeting, he comes away a better archer than be was when he went. Every one seems bent on detecting a beam in some fellow archer's cye, and is willing to now and then have a mote extracted from his own. The result is im-

and then have a mote extracted from his own. The result is improvement on all sides and increased interest in the sport. There were just seventy-two persons, by actual count, who went away from the tournament with a fixed and firm determination to take a championship medal next year.

The shooting of this year was characterized by an ease and certality of movement quite in contrast with last year's shooting. It is evident that an entire change has taken place in the mode of shooting munog Dhio archers. At the last tournament everyone had a style of his own. Some "hunched," others took "roundament of the product of the point of the product of t and a style of the own. Some furnished, others cone found ances; some swore aloud, others employed those quiet, deep and awful forms of profanity used when a stranger treads on your foot. This year's shooting was marked by a quiet moral tone, which was refreshing, to say the least. It was the triumph of Ford's method of shooting. Everybody was trying to shoot ording to Ford, and it was observable that the best shots were foliowing his method. There is now no doubt but that the re-publication of Ford's book will create a complete revolution in archery practice in this State. "It was a manly act of that To-ledo gentleman to republish Ford's book," remarked a member of a rural club during a slight full in the shooting. (Sixteen footed of a rural clausting a significant the shooting. (extreet tooler arrows were extracted from the body of the fellow who was guilty of the above.)

It was evident, as was often remarked during the tournament,

that something should be done to check the growing habit among archers of calling golds, a bulleyer. Anyone who has over ca-amined a bulleyer knows that there is not the slightest resem-blance between the two, and then the thing is not fair for the bull, for he has no chance of talking back. During the tourna-ment a hady member of the Society for the Prevention of Crucity to Animals, called me aside and asked me if I wouldn't use my indicence in trying to stop this slander upon the poor bovine's ocular organ. I assured her that I would do my best (heact this notice), whereupon she gave me a tract entitled, "Straight is

this indice, we report as a garden departed. Her idea ovidently was that all is not a bullseys that glitters.

I had intended, Mr. Editor, when I started out to give you as a kind of dainty relish at this stage of my report, a slight description of the different frocks worn by the gay dames and sprightly maidens who adorned our grobery meeting with their presence and at the same time touch upon the many-colored garments worn by our male archers. But I find that life is too short, and

further I understand that Mr. Will H. Thompson, who was such a welcome guest at our tournament, is going to give you scription of our meeting. The exthetic side of the affair I i to him, knowing that his account will be replete with graceful al lusions and adorned with the latest metaphors from the shores of

INTERNATIONAL CRICKET.

UNITED STATES US. CANADA.

WENTY long years have sped since the cricketers of Canada A have crossed the line to meet their American cousins in the field at England's national game, and great have been the the field at Engand's harbonic game, and great have been the changes in these two decades. Many of those that did battle then for their country's fame have sadly passed away, and the few that are lett can do little clse but look on, for the game is now courted both in America and the Dominion by much younger men, who are far better litted to play the old game in its new way. The match was the ninth in the series of these international contests, but for the lirst time in the annuls of cricket it was played under the auspices of the two associations which control the selection of the tenus, each in its respective country. The result of this new practical test of choice was therefore watched with anxiety by those who have the interest of the game at beart, and the ap-pearance of two thoroughly representative sides is a matter of congratulation to those who have carefully looked into the seeds congratuation to those who have carefully looked into the sects of time and predicted that the grain would grow. The match was arranged to be played on Monday and Tuesday, Sept. 13th and 11th, on the grounds of the Germantown Cricket Club at Nicetown, Philadelphia, but no provision was made for playing the match out should the weather prove stormy. This was an ssion which we trust to see rectified in the future, for it is exomission whom we trust to see recurse in the rature, for it is ex-tremely unsatisfactory to allow the conditions of a match of this importance to be so drawn up that the probability of a draw may even enter into the agreement. After traveling 500 miles no side wishes to be restricted as to time, and hereafter this match should as kent going until one team wins and one is beaten. Rain interbe kept going until one team wins and one is beaten. Tain interfered with the play on the afternoon of the first day and caused two adjournments. As soon, therefore, as C. Newhall settled down, the next morning, to his cautious, patient, wary innings, it could be seen with half an eye that nothing but a draw would be sult, and all interest was lost in the result of the match True, there was an exciting flurry when the wickets of the Cana-dians began to tumble in their second linnings, but for all tha there was not time to get rid of eleven men, allowing for the pre scribed intermission between the fall of each wicket. The man scribed intermission between two faint of each wicket. The man-agement of the grounds and the match was in the hands of the Executive Committee of the Cricketers' Association of the United States, which is composed of the following gentlemen: Messrs. A. A. Outerbridge, Chairman; J. Ridgway Moore, John P. Green Lindley Haines and Daniel S. Newhall. We take pleasure in testifying that the arrangements were simply perfect, and the committee deserves the highest commendation for their untiring attention to the wants of the visitors, the public and the press. The wicket, the scene of so many International contests, was much ader than it usually plays, and the pitch seemed to cut up more than it has done under similar conditions. The out-field was grand, and stakes and ropes marked the inner ring. Those were the boundaries—three runs for under and four for over. The attendance was not as large as we expected to see, but is

The attendance was not as ings as we specified to see, but a was found that 2,500 persons were on the grounds the lirst day, and as many as 3,000 the second. But atthough the audience was small it was an appreciative one, showing that Philadelphia's favorifo out-door sport is well understood by the sight seeing public, and the timely appliause denoting that the ring was well up in the line points of the game. The match from first to last was an assonishingly good one, the bowling and fielding baving the call the first day, and the effective batting taking its turn the next. Summarizing the individual play during the whole match, we consider that Law showed himself to be the best all-round man : C. Nowhall certainly performed best at the bat, with Ray a man; C. Nowman fearming performed uses the one, while has a good second, and Kessler and Ray, must take the pain for the install fielding at point we boy over seen in America. Van Reussilaerwas, as be always is, at bome with the gloves, and Law's work at deep coper point was worth a journey over to see. Of the bowling, the figures in the analysis prove nothing. We conthe bowing, the agrics in the analysis prove holding. We sider Logan the best man that over came out of Canada, although we remember Eberts well. For the United States, C. Newhall was by far the most difficult to play when the sun was up, for we ot carried away with the teiling performances of Brewster were not curried a way with the coining performances of newser-and Law during the closing moments of the match. True, Law sont them in a tasmacking puce, and Brewster kept well on the bails. But the setting sun caused the long shadows of the fine old forest trees that stand at the back of the ground to slowly creep out and spread like an outstretched band between the wickets. It such light we dofy any man to play, for as the ball would travel on its way it ran the gauntlet of alternate strips of light and shade. Gilean at times bowled grandly, with a peculiar curve in the arr that must have made his Yorkersanything but pleasant to meet. Ogden showed good promise, but outside of a fine piece of head work with Behan, which worked to a charm, D. Newhallwas

not up to his usual work. The fields were placed excellently by both captains, and Capt. Kirchhoffer had a good notion of making the most of his howling tolent.

THE GAME.

In charming weather, at H o'clock, the bell was rung to clear the grounds, and a few minutes later Capt. George Newball was fortunate, in the choice, and elected to take the innings. The bowltortunite, in the choice, and elected to take the Indings. The bowling was opened by Logan (medium round) from the lower end, followed by Gillean (fast round) club-house end. To Logan's bowling the twelve was placed as follows: Blake, at the wicket; Smith, straight-drive; Ray, point; Gamble, cover-point; God-frey, long-off; Kirchhoffer, short-leg; Gillean, slip: Ogden, long-leg; Behan, ord-drive; Totten, long-slip, and fromsalae, long-on. To Gillean, Logan took slip: Smith came in to long-stop; Ogden takens of the offere feel, behan of the offere feel. To difficant, Logari took sip: Sinti came in to long-stop; ower to long-off; Goffrey fell back to long-leg, and Behan to long-slip. Although there were frequent changes, these positions were adhered to in this innings. G. and D. Newhall went first to the wickets, and the former hit Logan's third ball to the boundary at Here for three, he then got fillean's first ball to leg for three, and D. Newhall drove him to long-on for a single. On the next ball G. Newhall put one to square-leg, which Kirchhoffer acce.ted—t, J. 6. Lawjoined D. Newhall and the latter played an over-pitched ball from Logan on his wicket—7, 2, 1.

This was a bad beginning for the United States, so Robert New-

This was it had beginning for the Difficial States, so Robert Row-hall, Philadelphia's favorite hat, was sent in to Join Law. Gil-lean's next over yielded 4 runs, Law cutting him sharply for 1 and R. Newhall hitting him to the off for 3. In Logan's next over R. Newball's off stump was removed by a breakback-11, 3, 3, R. Newhall's off stump was removed by a breakback-11, 3, 3. R. Hargrave partnered Law, who cut Gillean for a single, and the last comer slipped him for 2's. Logan bowled his third matilen—be was dead on the spot and bowling magnificently—and Gillean, after being cut for a single by R. Hargrave gave Law's stumps two close shaves. Logan's fifth over yielded 2 runs, each bateman getting him to leg for a single. Gillean sent down a maidea, and R. Hargrave in Logan's next slipped him for 3. Gillean followed with another maiden. Both batsmen were now playing steadily, and 4 runs were the result of Logan's seventh over. In (When's company of the player senged a single and Oxign steamly, and a runs were the result of Logan's section. An Gillean's seventh over each player secured a single, and Ogden (fast round) took the ball at Logan's end. Hargrave, after playing his first two balls, bit the third bard to the boundary, at square leg for 3. Gamble (slow round) then took Gillean's end, with the total at 32, but the slows were too much for R. Harwith the total at 32, but the stows were too much for R. Har-grave, for he lifted one to Gillean at deep long on and retired with a score of 16 made up of three 3's and two 2's and singles— 32, 4, 16. Kessler joined Law only to be clean bowied by Ogden, the first ball-32, 5, 0. Thayer, the pet of the Merica Citub, came next, and almost at once gave Ray at point a one-handed catch off the same bowler, which was nicely taken—32, 6,0. Brewster, the eighth man, faced the redoubtable Law, who had been defending his wicket obstinately. Gamble, second over, yielded a single to Law, and after he got Ogden to mid-on on a hard block, single to Law, and after ne got or Quent to 'min-no on a mire notes. Brewster out bim splendidly for 2. Gamble's next over was pro-lific of 4 runs, Law bitting him hard to the on for two 2's. In Og-den's fourth over Brewster placed bim nicely to the on for a sin-gle. With the score of 41 Logan took Gamble's end and Brews-ter out his first ball finely for 2 and another for a single. Law ter our ns inst onlinely for a and anomae for a single-base then added a single on the on, and Brewster suicked him to leg for L. Ogden was then driven for two singles, one by each bats-man, and Gillean resumed at Logan's end. On the first ball the batsman balked on a short run and Law was casily run out. His innings of 14 was a most excellent exhibition of sound cricket; It innings of it was a most extrinct extract a stay of over an hour at the bat—48, 7, 14. T. Hargrave joined Browster and at once bit Ogden splendidly to leg for 3, and Browster on thim for 1. The first ball from Gillean clean bowled T. Hargrave—54, 8, 3 od Clark joined Brewster, who was batting both carefully and and Clark Joined Brewster, who was batting both carefully and well. Clark, however, was not destined to improve the disastrous took of the innings, for Gillean got in on his leg stump on his second ball—54, 9, 0. Charles Newhall was Brewster's fourth partner. Ogden's next over was a maiden, but in Gillean's next along by was run off C. Newhall's legs, and Brewster placed him to the bye was run off C. Newhall's regs, and newster placed min of off for a single. Brewster then hit Oxden to the ropes at leg for 3, and C. Newhall drove him for a single. C. Newhall then brought down the house by a hard drive to the off for 4, off Gillean. The fielding of the Canadians was superb, particularly at this portion neiding of the Laminans was supero, particularly at this portion of the innings. When six unswere up Ogden handled the Dall to Logan, who sent down a malden to Brewster. C. Newhall then drove Gilleant to the off for a single, but Brewster on the next ball was bowled off his pad. His score of 15 was beautifully made; it contained one 3, three 2\*s and singles=6\*s, 10, 15. Van ser joined C. Newhall and at once cut Logan for 2, it being Renseliaer joined C. Newhall and at once cut Logan for 2, it being bodly fumbled by Gamble. Gillean put down a maiden, and after each batsman had cut Logan for a single, Logan beat Van Rensellaer completely and the side was out 70 runs, the innings ending at 10 clock, leaving C. Newhall 8, not out. During this innings a new and excellent method of calling the overs was introduced the offset beaverage.

nings a new and excellent method of calling the overs was introduced, the official scorer sounding a tap-bell after every five balls were howled. This saved the umpires the trouble of counting the balls and made the overs accurate.

The game was resumed at 1:20 p.u., with Totten and Logan at the wickets to do battle for Canada, faced by the bowling of C. Newhall (fast round), club bouse, and D. Newhall (medium round), lower end. The following are the positions at the start: For C. A. Newhall, bowling: D. Newhall, short slip Thayer, extra mid-off; R. Newhall, third man; T. Harravov without fuck, long slip: Brewster, mid-on; Kesper, point; G. Thayer, extra mu-out, K. Newhali, and Jon; Kessler, point; G. Newhali, short-leg square; Law, cover point; R. Hargrave-draw; Van Renssallear, wicket-keeper. For D. S. Newhall, cover, point; Thayer, short-leg; Clark, behad the bowler; E. Newhall, cover, point; Thayer, short-leg; Clark, behad the bowler; R. Newhall, point; that expected, the construction of the construction of the community of the construction of the con C. Newball's next three overs yielded two runs, and D run). C. Newbaits flext three overs yielded two funs, and b. Nowhall sent down three maldens. In C. Newhall's fifth over Totten was magnificently caught by Kesslor at point on a very hard low hit, a wonderful piece of cricket, and applied to the echo—7, 1, 6. Smith Joined Logan. The score stood at 8, when there was an adjournment for dinner at 2-m. On continuing at there was an adjournment for dinner at 2 p.n. On continuing at 245 p.N., C. Newhall sent down his fifth successive malden. Smith, in D. Newhall's eighth over, hit him cleanly to leg for 1, but lost his lest stump to a ripper from C. Newhall-a, 2, 1. Gamble joined Logan, and the bowling of the two brothers was dead on the spot, 8 maldens following. In D. Newhall's twelfth over. Gamble got hold of a slow one and sent it spinning to square leg for 3, but C. Newhall wenged his bothers by heading. Const. Gamble got noise of a stow one and sent respinning to square reg-for 3, but C. Nowhall avenced his brother by bowling Gamble off his legs—13, 3, 3. Trousdale was Logan's fourth partner. Lo-gan then hit D. Nowhall to deep square leg for 3, but was sharply caught behind the wicket by Van Renssallear off C. Nowball on the second ball of the next over-16, 4, 5 Behan, who is considered one of the most-tikely-to-score bats of the Dominion, foined Trousdale, but when the score had been increased to 20, a violent rainstorm broke over the grounds and put a sud-

don stop to the play. Fortunately the shower lasted but a few minutes, and the game continued. Behan then began to score, hitting C. Newhall to leg for 3 and cutting D. Newhall for the like figure. In C. Newhall's 29th over Behan cut him terrifically to deep cover point, but Law was there and returned the ball with lighthing speed to Van Ronssallace, and Trousdale was run out in attempting the first run—20, 5, 3. This was one of the intest pieces of fledding ever witnessed on any cricket Heid Godfrey cause next, and Behan opened his shoulders to an over-trained and from the test power and deven how to the second den ston to the play. Fortunately the shower lasted but a few Godirey came next and Beban opened his shoulders to an overpitched ball from the fast bowler, and drove him to the grand stand for 3. Ten more runs were added to the score, when D. Newhall sent Behards leg ball spinning through the air. This latisman had assisted with 14, marked by hard cutting and driving. His score contained tures 38, two 28 and a single-38, 6 H. Kirchhoffer Joined Godfrey, and D. Nowhall let the matter' off in the slips—an easy catch. Inspired by this slice of luck. Godfrey sincked the fast bowler for 3 over slips, head and cut him to the ropes for 4. Rain again interrupted the play at 5 o'clock and the match was given up for the day, with the score at 48, of which Godfrey was not out, 13, and Kirchhoffer, not out, 1.

SECOND DAY'S PLAY.

At 1829 a.m. the two not outs of the evening before continued the Canadian innines. One more run was added to the score when Law was put on to how ivee D. Newhall. Gooffrey force bin from two and then Kirchhoffer's off stump fell to a shooter from C. Newhall-51, 7.1. Itay followed, and after Godfrey had cut Law for two, be was finely run out by T. Hargrave-53, 8, 18, Ozden joined Ray and singles became the order of the day until the telegraph showed 60, when Law got a rattler in on the former's stumps-60, 9, 4. Blake came next, and Ray monopolized the howing, intring freely to all parts of the field. When the word is the start of the field. Hzed the bowings, intting freely to all parts of the field. When the score stood at 73 R. Hargrave relieved C. Newhall, but the runs continued to come. Bay driving and hitting Law to leg for a brace of 34. It was not until 9 more runs had been added that R. Hargrave caught Bay at mid-on off D. Newhall, who had resumed at R. Hargrave's end-sl, 10, 20. Gillean followed, and after securing a couple was caught by G. Newhall; the innings closing for a total of S3, thus topping the United States innings by Elmos.

At exactly moon the second innings of the United States began Mith C. Newhall and G. Newhall, opposed by the bowling of Logan (lower end) and Gillean (club-house end). C. Newhall, the not-out of the previous innings, took the first ball, and nearly succeeded in running his brother out in the first over. After two succeeded in running his brother out in the first over. After two maidons C. Newhall opened the ball by driving Logan to the off for a single. Four maidens followed, the bowling being well on and steady play being the order of the day. In Gillean's fourth over C. Newhall got him well away off his logs to deep square leg for 3. Logan sent down another maiden, and G. Newhall put Gillean away for 2, but fell to him in the next ever—\$1, 2. Law partnered C. Newhall and the stand of the match was made. Both batts mong of hold of the bowling and slowly the score advanced. At 18, Ogden supplanted Logan and the play became monotonous, it taking over half an hour before the fins showed 30 up. Gumble now took the ball from Gillean and 12 more runs were added. With the score at 42 Gillean took Ogden's end and Logan succeeded Gamble. When Law had obtained a dozen he gave Emake, the wicket keeper, an opportunity to eatth him out of his ground, but the club, and as a coepted. The score kept slowly creeping up to him out of his ground, but the chain owas reached, and then so, when C. Nowhall care the chain of the core kept is must list yet a disabing drive to the off for 3 off Gillean, and Law provoked a howl of delight by a disabing in and driving Losan to the chain of the the reporter's stand for 3 and bitting Gillean to the boundary at squave-leg for another triplet. Ogden then went on at the lower end in Gillean's place and Law, in trying to lift thu to leg, fell a victim to Helmoken, who was helding as a substitute for Totten—76,2,35, An adjournment was now had for dinner, and the game was not resumed until 2:15 o'clock. B. S. Newhall then went with his brother to the weckets. Ogden finished his over, C. Newhall cutting him for 2. In the next over, R. Newhall bit Gillean's second bati wickedly to med-on, where Kirchhoffer held it brill-liantly in one hand—78,3,0. Kessler followed and narrowly ecaped being bowled on his first bald. C. Newhall cut Ogden for 1, and Gillean sent down a unaiden. O. Newhall placed another in the stips, and Kessler snicked Gillean to the club-house for 3. When the score had reached 35 Behan (slow round) took Gillean's end and started with a matiden. Ogden put down another, and C. Newhall prized I toleg, which brought tup his score to 49. Kewhall prized I toleg, which brought tup his score to 49. Kewhall prized I toleg, which brought tup his score to 49. Kewhall prized I toleg, which brought tup his score to 49. Kewhall prized I toleg, which brought tup his score to 49. the reporter's stand for 3 and bitting Gillean to the boundary at and started with a maiden. Ogden put down another, and C. Newhall priceed I to leg, which brought up his score to 40. Kessler then litted Behan over the ropes to leg for 4, the longest bit of the match, and hit him to deep mid-on for 2, he then just 1 hack to howler—45, 4, 10. Thaper was C. Newhall's lifth vis-a-vis, and he played his mrst 3 overs carefully, but, without scoring, was sharply caught by Bake at the wicket off Behan—97, 5, 0. R. Hargrays, the seventh man, joined C. Newhall, who had slowly been adding 4 to his score. In Ogden's next C. Newhall put a low one to Logan at slip, and retired for the splendid score of 44, made up of the 25, 30 km signs. Me had been nearly three hours at to Logan at slip, and retired for the splendid score of 44, made up of nve 38, six 28 and singles. He had been nearly three hours at the wickets, and throughout had played an exceedingly careful innings without giving a chance—67, 6, 44. Brewster filled the vacancy and placed Behan to the off for a single, and R. Hargrave got Ogden to leg for 1, then Brewster hit Behan to the off for 1, and among the wildest cheers the telegraph announced that the century had been reached. R. Hargraves placed Ogden to leg, and Brewster fell to Behan—102, 7, 2. D. Newhall joined R. Hargraves, but at once gave Gamble at cover-point an easy chance—102, 8, 0. T. Hargrave paired his brother, and when let runs more had been secured Logan took Ogden's end and with the first ball got past R. Hargrave's bat—112, 9, 4. Clark partnered T. Hargrave out him through the slips for 2. Clark drove Gillean to the on for 3 and T. Hargrave kept increasing his score by teg hits and drives.

tent to the on top and 1. Imagato keep merchang an accretion by teg hits and drives.

The interest in the result of the match was now practically gone, as there was not sufficient time left to finish the match, which must end in a draw, no one even thinking how interesting which must und in a draw, no one even thinking how interesting the end might be. At 1:23 Behar resumed at Gillean's end, and the fielding became somewhat loose, save with a few exceptions, noticeably Ray, who from first to last fielded at point in an extremely brilliant way. Runs now eating quickly for the first time in the minings, and at 130 Ogden took the ball from Behan. At List the partnership was broken by T. Hargrave's fifting one of the gardenestic behalf of the strength was broken by T. Hargrave's fifting one of single is 33-10-22. Van Renselher, the last man, joined Clark, who made several hard and well-placed drives, and the former glashed both bowlers until the score ran up to 166, when Gamble took Ogden, and at last the will Logan gothou Van Rensallaer's stunge and the limings closed for 163, or a grand total of 2.35 for both innings. Van Kensallaerhad made an even dozen at Clark 21, not out, nade up of four 3°s, three 2°s and singles. Af 5:21 p.m. the Canadians commenced their second innings in a match that has ever been seen on an American or any other cricket field. Legan and Blake started the batting opposed by cricket field. Legan and Blake started the batting opposed by

Law and Browster (medium round). The score of this innings and the bowling analysis will tell the story better than it can be described. Three wickets fell without one run being scored, nor did the bad luck of the visitors change, for when time was called at 545 P.M., six good bats were out for a total of seven runs. Then the pent up excitement of the crowd, which now numbered over three thousand, broke loose in the wildest cheers, and amid the din, Law, the bowler, was carried off the field on the shoulders of his friends. Thus ended the long talked of international match in a draw, although it must be said that at its finish it was much in favor of the United States. Annoxed is the full score:— Law and Browster (medium round). The score of this innings and UNITED STATES.

NEW YORK YACHT CLUB.

BENNETT CUPS, THURSDAY, SEPT. 16TH.

Twill not do to look a gift horse in the mouth, and so generous donor of the two \$500 eups sailed for by yachts of the club last Thursday, even if he did, for some ulterior purpose, attach the peculiar condition of "no time allowance" to the rules governing the match. Time, we take it, is granted to effect some sort of equity among yachts varying in size. At best it is only a rough approximation, but to sail without any time at all is so thoroughly "scrubby" that a race must lose much, if not all, of its value in consequence. This is exactly what happened on Thursday, for the cup went to the wrong bost and a victory has been recorded for Gracie, when, as a matter of fact, the honors of the day belong in common equity to Mischief. The former takes the cup and is bailed as victress, but the latter deserves the credit. This is turning matters "topsy turry" so effectivally that the match will produce one beneficial result, inasmuch as it is not likely that another will be sailed under similar conditions. We cannot understand how an owner, taking pride in the record of his craft, can be again induced to sail under such a killing handicap. The match was open to schooners and sloops, and torought out a fine array of flyers, 3 cracks of the two stick persuasion and equal number of the "lubber's rig." The committee boat, with a representative of FOMEST AND STREAM, went over the course, and a most exciting and close race was witnessed all day, but there was so little

anne array of nyers, a cracks of the two stick persuasion and equal number of the "lubber's rig." The
committee boat, with a representative of FOREST AND
STREAM, went over the course, and a most exciting and
close race was witnessed all day, but there was so little
windward work in the steady northwest wind that it became largely a matter of running, affording a line opportunity of seeing what a remarkable success Mischiel'
is as an "all round" boat. To windward she has established a reputation as second to nothing that floats, and
this day she romped along at a speed which, considering
her dimensions, was a veritable "eye-opener" to those
who lack faith in the stylish iron crack. In short, she
beat everything, including Gracie and Tidal Wave, had a
just allowance of time been grantled,
As before stated, the cup for sloops went to Gracie,
some 12ft, longer, while among the schooners the sharpnosed Tidal, with a vast amount of nautical talent
aboard, from Capt. "Joe" Elsworth down, had a
close succession "Time.

Addie took the purse. Heeper saved her entrance, but her
weather was "hers" exactly. The usual slip-shod start,
with a margin of ten minutes to wake up, was carried
out, Clytic going across first, Mischief, Phantom, Tidal
Wave, Gracie and Fanny following at short intervals,
the latter being unable to make up her mind in less than
12m., hereby being handicapped with 2m. beside her
other troubles. It was a stern chase for her all day. At
the Spit Clytic led, Tidal second, Phantom third, then
Mischief, Gracie and Fanny, Mischief ran up on the
leaders, and went out to the lightship in good company.

This mark was bauled around by Tidal in 1h, 14m. 8s;

Do you consider the —— gun a good one? 3. What is the lowest figure I can get a gun for that will do good work? Ans. I. Eight pounds, 10-gauge, 50 in. 2. Yes. 3. About fifty dollars will procure you a safe gun.

HALL, Syracuse, N. Y.—What size of a gun would you advise one purchasing for general shooting—10, or 12-bore. I want a gun that I can shoot in trap and field and duck? Some say a 10 and others 13. Please advise. Ans. It is much a matter of fancy. We would recommend No. 10. The firm you mention stand well with

the trade.

C., Kent County, N. Y.—I wish to send a dozen live quail to En La, Kent County, A. I.—I was a osen a consensive dual relation that the probable cost will be? If you cannot give the desired information, could you instruct me who to write to that could do so? Ans. Write to E. B. Goldsmith, 38 Wall street, New York. He will give you all information desired.

ections of salt and water will do good, but we suggest that you give injections of turpentine, small dessertspoonful mixed with warm mlik. This will rid her of the worms, which probably cause a sympathetic irritation of the bladder, and will prevent the trouble of her frequent desire to pass water.

T. J. D. Alabama.-I have a mare that is oun-shy and as she is I. J. J. Alibrams.—I have it mare that is guiness, some as see so almost perfect in every other respect, can you suggest a remedy for her fault? Ans. In some cavalry regiments the feeding time is denoted by the firing of a pistol. This some changes a young horse's dread of the report into eager, joyous expectation. It is hotes a dread on terport mice cager, goods expectation. It is the visible animation of the old horses that so quickly reconciles the cavalry colt to the sound of the "feeding pistol." Fear and joy are feelings get more contagious in animals than in man. We can suggest no botter mode of training.

C. M. S., Dunbarton, N.H.-1. Can voti tell me where I can get a pair of 8-bore barrels? I wish to get the barrels, locks and action fitted together, but not finished. I can get 12 and 16-bore in Boston, but cannot find a pair of 8s. Would not an 8-bore give better both out calmot ma pair of as. Workin and a-store greenesses pattern at long range than a 10, both being chooked allke? Ans. It is doubtfull if you cam get a pair without ordering them. We do not know of a pair in the city. 2. No better pattern. J. K., New York City.—I have a pointer that has been sick for a long time; not knowing his disease until I discovered he had

passed a part of a tape worm. Please advise a remedy. Ans. As the age of your dog is not given it is impossible to prescribe exact quantity, but if you will starve your dog twenty-four hours, then give from ten to thirty drops of oil of male fern, repeat dose half hour later, and follow with caster oil, you will, in all probability, produce the desired result.

J. W., Pittsburg, Pa.-I have an Irish setter dog, one year old J. W., Pittsburg, Pa.—I have an Irish setter dog, one year old. He is strong, lively and has a moderate appetite, nose cool and moist and pulse good. Have fed cooked meat with some vegetables. At times he draws himself in about the kidneys and seems in pain, so much so that he howls; has had diarrhea, but is over it and is somewhat costive now. Please prescribe for him. Ans. Your dog has occasional fits of coile. When the symptoms appear give dessertspoorful of acts of blut that it easpoonful of laudannia. Exercise in moderation and the food you have been feeding will bring your dog around in time.

Many answers deferred until next week.

# FOREST AND STREAM A WEEKLY JOURNAL.

DEVOTED TO SHOOTING, THE KENNEL, THE RIFLE, ANGLING AND OTHER FIELD AND AQUATIC SPORTS, PRACTICAL NAT-URAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUTDOOR RECREATION AND STUDY

Published by FOREST AND STREAM PUBLISHING COMPANY, NOS. 39 AND 40 PARK ROW (Times Building), NEW YORK.

LIBERAL DISCOUNT TO THE TRADE.

THE MANUFACTURERS OF THE "FOX" GUN, FEELING THAT DEALERS, as a general thing, have not done justice to the merits of this WONDERFUL GUN, are determined to have them placed before sportsmen more generally, that their great merits may become better known and appreciated. It is needless to speak of THE ELEGANT WORKMANSHIP AND WONDERFUL SHOOTING POWERS of these guns. It is a fact well established that they are UNSURPASSED BY ANY IN THE WORLD.

We propose for a limited period to offer a line of these guns at the following EXTREMELY LOW PRICES, after which the original prices will be restored, our object being to introduce the guns into sections of the country where dealers have failed to present them; in the firm belief that where they become known they will be the established favorite, and we shall reap the benefit in future of this great sacrifice.

Such Inducements Have Newer Reforc Reen Offered

Such Inducements Have Never Before Been Offered.

NEW YORK, THURSDAY, SEPTEMBER 30, 1880.

HUNTING CARS .- During a recent visit to Chicago we were kindly allowed to make a thorough inspection of the hunting car Davy Crockett, owned by the Pullman Palace Car Company. The car is a full-sized palace car, with a kitchen on one end, with refrigerator, a large range and supplied with all the paraphernalia a first-class cook would need; next to the kitchen is a room for the stewards, with carving tables, etc., and so arranged that when the table is folded up two good berths are made for the occupants. Next are four full sections, two on either side of the car, then comes the Sitting-room in the center of the car, with extension dining-table, which can also be used as a card-table for evening amusement. There are a dozen large easy chairs, all well arranged for comfort. Next are four more sections, which, with four berths that can be made up in the sitting room, gives good sleeping accomodation for twelve persons. In the other end of the car are kennels for eighteen dogs, nicely carpeted and in good order. A gun room, private locker, wash-room, etc. The car is well equipped with buckets for watering dogs, washing guns, minnow pails, and in fact every requisite for hunting or fishing. There are large refrigerators of the most approved pattern, for keeping game, underneath the car, and it may well be called a sportsman's club-house on wheels. The price for using the car is \$35 a day, equipped with a cook and two stewards. The car had just come in from a Western trip, and the companion car, "Isaac Walton," is now on the road. Special rates can be made for hauling the car over any road,

#### GAME AND FISH PROTECTORS OF NEW YORK.

FEW weeks ago we noticed the passage of a bill by the New York Legislature authorizing the Gov ernor to appoint eight persons, to be known as game and fish protectors, whose duty it should be to enforce the statutes for the preservation of the objects named, and to bring action against all persons found violating the laws relating thereto. These protectors were to hold office for the period of three years, and were to receive a salary of \$500, and traveling expenses not to exceed \$250. This bill was approved by the Governor, and was favorably commented upon by the press generally as the possible beginning of a new order of things creating paid officers, who had no share in the fines or interest further than to do their duties, which, if done conscientiously and without fear, would be a stride in advance of anything yet proposed to advance the ends aimed at.

In our opinion, one fault in the bill, otherwise so care fully framed by Mr. John E. Develin, was that it did not provide for the proper distribution of these officers throughout the State, but left them to be selected at large, which might probably have resulted in their all being appointed from one county had there been political pressure enough in one direction; and as the salary is not large enough to enable a man of the right sort to devote his whole time to it, it is evident that his location becomes a matter of primary importance. The following are the persons appointed and their places of residence, or address :-

S. V. R. Brayton, 59 Division street, Albany, N. Y. John Jessup, Hudson, Columbia County,

Sylvester J. Palmer, Indian Lake, Hamilton County. John Liberty, Elizabethtown, Essex County. Daniel B. Horton, Ithaca, Tompkins County. G. M. Schwartz, Rochester, Monroe County. William P. Dodge, Prospect, Oneida County. John I. Collett, Cobleskill, Schoharie County.

This distribution will strike the student of game protection as a very poor one, leaving the markets of New York and the whole of Long Island, the home of the poacher and trout thief, wholly alone, with no nearer protector than Hudson, Columbia County. Albany and Schoharie counties, adjoining each other, each have a protector, and there are not two counties in the State which are as poor in game and fish. Hamilton and Essex, two adjoining counties in the wilderness, have each one, and while there is game and fish in plenty in them, the prospect of accomplishing much in the way of protecting by this means is not great while the market is open. believe in closing the market, and the poacher's occupation is gone. The few trout or deer killed out of season by persons living in the woods amount to nothing beside se slaughtered by the market shooter who forestalls the season, if indeed it is desirable to prosecute the guide or woodsman who kills merely for his own wants. Destroy the market, and the inducement to violate the law is destroyed. New York City is the great market, and if two protectors had been stationed in it they would have accomplished as much as it is possible for the other six to do; their known presence would be a check upon dealers disposed to turn a dollar by an illegal sale.

Few people in the interior of the State have an idea of the great amount of shooting done on Long Island, or of its fishing interests, while all who are conversant with the markets are aware that the new ten inch lobster and half pound striped bass laws need constant supervision as well as trout, woodcock, snipe, etc., with which the island abounds; but it is the curse of the service that all appointments "with money in" are made by politicians for political ends, and the man with the best backing, politically, gets the place. We know nothing of the character of those appointed, and hope they may be made of the proper stuff to do their duties without fear or favor, but, as we have said, their geographical distribution is about as bad as it could be, Rochester being the only market of any importance which needs watching, that point being one of importance, as well as the fisheries near by; but Buffalo is also an important district, with Rochester as the nearest station of a protector. We will watch closely the result of the new law, and hope to find much in it to approve, as under the old system the clause giving half the fines to the informer laid

the latter under the suspicion of mercenary motives, a thing most distasteful to many, who will now have no hesitation in calling the attention of the nearest protector to any violations of the law which he, as a salaried officer, is bound to take cognizance of and prosecute.

#### WORK ON THE SUSPENSION BRIDGE.

NE of the most wonderful structures of mechanism has recently been accomplished on the Suspension Bridge at Niagara Falls, which was opened for traffic in 1855, having a span 821 feet 4 inches from center to center of the tower on either side of the river. It was at that time considered a marvelous piece of work, and many doubts were entertained as to the durability or permanence of the structure. During its immense length it had a railway for trains, bound West or East, on the top of the structure, and a good roadway for carriages, wagons, etc., underneath. The bridge was a suspension bridge, and the truss system was purely a combination of wood and iron, and has been in constant use for the past twenty-five years without any accident or breakage of consequence. In March, of 1877, there was an inspec-tion of the four cables, each measuring 10 inches in diameter and containing 3,640 wires, the diameter of each wire being a scant No. 9 gauge. The inspection first made was at the strands where they they join the anchor chains, which were imbedded in masonry at either end, and a few of the outside wires were found to be corroded. The corroded wires were cut out at once, and new wires supplied in their places. The portion of the cables where they passed over the towers were found in-

The commission of engineers making this examination reported that the cables were sound, but that in their opinion the anchor chains were not as strong as the ables, and advised the reinforcement of anchorages and chains. The following fall the work of the reinforcement was commenced, and finished the following year. The new chains were connected to the cable and a permanent stress of 1,000 tons applied to each end of the bridge, relieving the old anchorage of that amount. The Board of Directors, in March, 1879, decided to renew the truss system with iron and steel. The contract was let to the Pittsburg Bridge Co. to furnish the metal upon the plans offered and adopted by Mr. L. L. Buck, of Washington, D. C., who has the entire charge of the work. The delivery of the material began in September, 1879. and ended in April, 1880. The erection of the works began on the 29th of May, 1850, and will be completed by Sept. 15th, 1880. Thanks to skillful engineering on Mr. Buck's part of the programme, the work has gone on very successfully, without any obstruction to passenger trains, and hardly a vestige of the old woodwork of the bridge remains. No one who has crossed the bridge knows of the changes, but they have been made quietly and systematically.

The woodwork removed relieves the bridge of at least 100 tons in weight; aside from that, it largely increases the carrying capacity, as well as the safety of the bridge, by giving a uniform strength unsurpassed, as well as a structure that can be viewed with pride by any American citizen. The bridge, when completed, will be painted a pure white, and look more like a cobweb than a structure that will carry thousands of tons.

Dr. Henshall,-Dr. J. A. Henshall has removed from Cynthiana, Ky., to Cincinnati, Ohio, where his address hereafter will be, No. 100 West Seventh street.

PHILADELPHIA KENNYL CLUB. - Early in the season of next year the Philadelphia Kennel Club proposes to hold its second Bench Show of dogs. The exhibition will be held in the Permanent Exhibition Building, at West Philadelphia, and, in connection with the show, colley and water trials are being talked of,

#### EVADING DETONATION.

UNITED STATES CIRCUIT COURT. - New York, Feb. 19th, 1880,-Before John A. Shields, United States Commissioner Southern District of New York. Deposition of Carl Dittmar, of Binghamton, N. Y., who, being first duly sworn, deposes and states, in an-1, 18. 2., who, being arst duty sworn, deposes and states, in an-per to Cross-Question 836:—
My unipowder, when 1 first made 41, had the same tendency as

All Duarposees, once 1 for a most all the guns at first, when i began to introduce it. It was just the same as if I would use nutro-duce it. It was just the same as if I would use nutro-duxcemine powder. I have it note so that it is tained down. and don't harst any more guns."

THE "Dittmar Sporting Powder" is a nitro-cellulose product, As such it may explode in either one of two ways, by simple ignition, like gunpowder, or by detona tion, like nitro-glycerine. It has been on the market for five years. During that period, in addition to continuously advertising it to be safer than the ordinary black gunpowder, the manufacturers have concealed its true character, and when others alleged that it did possess this nature, they have flatly denied or evaded the assertion

In the course of our exhaustive discussion of this subject last week, after having shown that the product could properly be classed only among those explosives which may under certain conditions detonate, we said that the correctness of this classification had previously been three times evaded. We should have said ten times; and we might have added further that some of these evasions in the form of advertisements were repeated week after week.

That the readers of the Forest and Stream may fully appreciate that our statements in respect to this are well founded, we have been at some pains to review the history of the powder with reference to this particular point, and we add to-day another chapter to that full discussion of this subject which we proposed to ourselves at the outset of our task. In the present paper we shall attempt only to show how the charge that the "Dittmar Sporting Powder" should properly be classed among the detonating compounds, was evaded and denied.

The first suggestion that the Dittmar powder should be classed among the detonating compounds was made as early as 1875 :-

carry as 1870;—
FOREST AND STREAM, Vol. IV., page 285, June 10th. 1875. "A
Subscriber "says: "The proper name for this powder is gunwood, it being in its nature the same as gun-cotton, prepared in
the same manner, only reduced to some extent by washing with
siteched, which has the effect, if left long enough to soak, of totally destroying its effective force. The gun-wood, as prepared
with sold to consumers to high the hour ways to the only in the and sold to consumers, is highly dangerous to life and limb," etc.,

The reply to this consisted of both denial and evasion :-FOREST AND STREAM, Vol. IV., page 315, June 24th, 1875. Letter from Carl Dittmar says (italies his own):— "The statements of 'Subscriber' in your issue of 10th of June in

regard to my now powder are erroneous. I do not make such powder as he describes. He must have confused my new article with the Eaglish 'wood-powder,' from which mine differs essentially. I do not use alcohol in its manufacture. If he will burn some of it he will find that it is very different from gun-c and that it burns very much slower than black powder in the gun about the same as black powder."

He might have added, for that matter, that nitro-glycerine burns slower than black gunpowder and slower than his own compound. It would not follow, however, that nitro-glycerine would "work in the gun about the same as black powder;" nor was it true that the Dittman nitro-cellulose worked as black gunpowder.

FOREST AND STREAM, Vol. V, page 72, Sept. 9th, 1875, A letter is republished, written by "Gloan," which as "Gloan," which asserts that the Dittmar powder probably belongs among the explosives, which are rending and shattering. To this an appended note says that Mr. Dittmar has re-

"With regard to the composition of the powder, he declared most positively that no substance such as chlorate of potash or nitro-giverine enters into its composition, nor will he use any pieric acid combination, or any kind of fulminate. This can be ascertained by analysis. It contains all the ingredients of Schultze powder, with the addition of starch, and he argues that his po powder, will the addition of starch, and he argues that his powder is absolutely safer than that preparation. If there is any danger in using his powder not inherent in the black, he desires to know it, and will be most grateful to any gentleman who will convince him of the fact.'

The proffered gratitude was never exercised. manufacturer of the powder, already knowing full well and better than anyone else the peculiar danger of his nitro-cellulose product, could not be "convinced" of it

FOREST AND STREAM, Vol. VI. page 91, March 16th, 1876.-Letter from Carl Dittmar says: "I never have used, and never shall use for my sporting powder, such dangerous materials as nitro-gly-cerine, chlorate of potash, pieric acid, etc. If my powder is put on an anvil and struck with a hammer it does not explode, which shows that it cannot contain nitro-glycerine or chlorate of not

Of the action of the 1876 powder on an anvil we make no assertions. But the "Dittmar Sporting Powder" de livered in sealed cans from the office of the Dittmar Powder Manufacturing Company (No. 2), when put on an anvil and struck with a hammer does explode.

FOREST AND STREAM, Vol. XII, page 93, March 6th, 1879.—Letter from Carl Dittmar says: "I mustagain say that my powder is not a 'wood powder,' as it is entirely different in its composition. I use partly paper pulp, which may not be of wood at all: but I use so party paper piny, which has not been wood at m; but I been many other ingredients besides that the pulp is but a small portion of the whole, and it is not only different in composition, but also in properties, from the real 'wood powders.' I was connected with the manufacture of Schultze powder sixteen year ago, and I could see at that time that it would never supersede the old powder, and I have worked ever since to invent an en-tirely new powder which will do what Schultze powder never

Turning now to the files of the ROD AND GUN we shall find the same story there :-

ROD AND GUN, Vol. VI., page 274, Aug. 7th, 1875, "Ex-Gun-maker" says: "The ingredients of which this powder is com-posed are generally understood by experts to consist of an infinitessimal amount of nitro-glycerine and gun-cotton, toned down with sugar, etc

The reply to this contained the "pledge" already autoted :-

ROD AND GEN, Vol. VI., page 289, Aug. 11th, 1975 .: my word of honor that I never sent, and never will send, powder forsporting purposes which should have the slightest trace of

On page 358 of the same volume will be found a letter from Mr. J. W. Long, suggesting that in very many respects Dittmar's powder is strikingly similar to gun-cotton. The reply evades the charge in the same manner as already quoted from the Forest and Stream, namely, by diverting attention away from the explosion of the two compounds under confinement and to their combustion in the open air :-

Rod And Gun, Vol. VI., page 387, Sept. 25th, 1875. Letter from Carl Dittmer: "He compares my powder with gun-cotton, but he will find a great difference between both when he burns them outside the gun, when my nawder will burg very slow with much residuum, while gun-cutton will thash like lightning and leave no

"Medicus," writing from Boston in the interest of the powder, winds up a long article by piously observing that our immunity from accident is due more " to the merciful interposition of Providence and the strength of our guns than to any care of our own;" the inference clearly being that it is just as easy for Providence to protect us from a detonating, nitro-cellulose compound as from the common black nowder.

But Mr. Long's letters show that he knew what he was talking about, and he reiterated his charge (Vol. VII., page 73, Oct. 30th, 1875) that the Dittmar powder was analogous to gun-cotton, and said that he would fear to stand near a man shooting it. To this, one form of reply was a letter (Vol. VII., page 98, Nov. 13th, 1875) from Dittmar, Jr., a boy twelve years old, who thinks that if Mr. Long fears to stand near a man shooting the powder, perhaps he will not fear to stand near a boy shooting it. ete.

The other mode of reply was what is aptly termed " mud-throwing." There are two varieties of mudthrowing. One is intended, like the ink of the cuttlefish, to blind, the other to defile. Both were employed here "Medicus" being closely pursued by the clear and logical writing of Mr. Long, had already written whole columns of blind and meaningless chemistry vaporing, and then finding that ineffectual, he adopted the other line, and judiciously turned the discussion into a personal contro-This kind of mud-throwing, which smirches a man's character, is usually efficient to divert attention from the real merits of any discussion. It was efficient in this case, and afterwards it was adopted with another.

Mr. A. G. Dole, in the course of a long communication about the powder, said :-

ROD AND GUN, Vol. LX, page 250, Feb. 10th, 1877.—"I will designate these modern powders as acid powders, and here are the names of several of them, viz., Dualin, Giant, Rend-rock, Vulcan, Dynamite, Gun-cotton, etc., and I here take the liberty to suggest whether the Dittmar may not properly be included in the

gest whether the Sittain may have progen to category." OD AND GUN, Vol. IX, page 375, Feb. I;th, 1877.—Lotter from Carl Dittmar in reply to A.G. Dole: "My Sporting Powder has nothing familiar with Giant Powder, Rend-rock, Dualin, Vulcan, etc., which powders are only used for blasting purposes, respondent had only looked at your advertising col cured one of my circulars, he would have found t have found that I warrant my powder not to contain ingredients like nitro-glycerine, chlorate of potash, etc. If he does not believe it, he can have it and lyzed. I hope his comparing my Sporting Powder with Giant Pow-der, etc., is only from ignorance, not from a wish to frighten our

The advertisement, in the same issue, contained these words :-

"It is much safer than black powder, as it only explodes when

dl confined.
The manufacturers guarantee that there are no juggedients like nitro-glycerine, chlorate of potash, or pieric acid, or wood in its composition as some suppose. It cannot be exploded by

We have no inclination to conduct the reader further into the unsavory record of the controversy respecting the "Dittmar Sporting Powder." That, record, is one of repeated and successful attempts, practiced for five years to put the product upon the market, to induce men to use it and to keep them, while using it, in igno rance of its true nature.

That record ought now to be closed.

Our discussion of the "Dittmar Sporting Powder" last week was simple, clear, complete and conclusive. It is unanswerable.

Next week we shall discuss further some of the peculiar properties of this dangerous compound as determined by our own experiments with it,

It is due to those concerned that we should here state our belief that some of the parties who have been prominently associated in the manufacture and sale of the "Dittmar Sporting Powder" were as wholly ignorant of what they were selling as the purchasers were of what they were buying. We know that some of these gentlemen gained their first knowledge of the real character of the powder from the article in the last issue of this paper.

It is unnecessary to publish the letters of complaint received by some of the former firms engaged in the sale of this product.

The letters received by one company, we have been assured, were so numerous, so frequent and of so grave a nature that the recipients were filled with alarm by them, and actually passed sleepless hours of suspense lest the next morning's mail should bring reports of fatal accidents with the powder.

The standing explanations of these accidents given to the sellers and buyers alike were either that the gun was a poor one or that the "directions" had not been fol-Whether or not these explanations sufficed, in cases like the following, we are not informed :

UTICA, N. Y., June 28th, 1859. H. C. Souires, Est., New York :-

H. C. Squires, Esq., New York:—
Dear Sir: We have in our hands for collection a claim against you and the Dittmar Powder Co. for damages done to two guns owned by Mr. Jay C. Smith, of this city.
The Injury consists in tearing to pieces a 0 pound 12 gauge Ferriss breech-loading shot gun of the value of \$150.
For seriously damaging a 10 pound 6 ounce Nichols & Lefever II.
L. shot gun, 10 gauge, to the extent of \$50. This happened in Austi best while cause Nichols and Comments.

April last while snipe shooting,

The powder was bought of you about August, 1878, a five nound books. The loading was done precisely as directed by you, except the powder was not tapped in the measure, hence the charge was not so large as you permit. The shells which did the mischiet were leaded in October, 1878, and a number of the shells wer were roaded in October, loss, and a number of the shells were used in the fall with safety. The remainder were laid away unti April, when Mr. Smith, in company with a triend, went snip shooting. The friend carried the 10 gauge and Mr. Smith the 12 The first snipe that rose was fired at by Mr. Smith, and immediately afterwards the friend fired both barrels from the 10 cause Mr. Smith's gun came from his shoulder, barrels in one hand, stock in the other. The right barrel was torn open at the breech a distance of three or four inches, and the shell went out the opening. The barrels were torn upart quite a distance from the ppening. The barrels were torn apart quite a distance componence. The treech piece was cracked and bent and both upper and lower fastenings broken off. The gun has left one barrel and two locks; everything else is ruined. The other gun had the fastenings broken and is strained.

Both these guns had previously held larger charges of both black and Dittmar powder newly loaded, and both have shot shells out

of the same lot newly loaded.

You can give such attention to this as you deem advisable. We will begin suit on the 15th July unless the matter is arranged. Yours respectfully. SUTTON & MOREHOUSE

Note.—The foot note second column of page 147, last week, should have included the cross-questions and answers 550 and 551. In the last line of A. J. Parker's letter, page 144, for sealing, read selling.

DEVIL FISHES.-The great cephalopod, or giant-squid, which was caught on the Banks of Newfoundland in 1976 and sold to the New York Aquarium, is now traveling with W. C. Coup's circus through the Southern States, and letters have been received asking if it really is a genuine animal, if it ever was alive, etc. This scen ticism, no doubt, arises from not only the extreme rarity of this giant species, but also to a lack of familiarity of the family to which it belongs.

The squids are used for bait for many fishes along the Atlantic coast, but are small, seldom exceeding ten inches in length, while the body of Coup's animal in life, before being shrunken with alcohol, was ten feet long, and its arms were thirty more, making an extreme length of forty feet, the largest one known to be found entire. Portions of arms have been thrown up by the sperm whale in its death flurry, which must have belonged to much larger individuals, thus proving that the greater depths of the ocean are inhabited by larger mousters of this sort than man has ever seen, We can assure our friends in the rural districts that Coup's "devil fish all that it claims to be, and is not made of rubber, leather or other material, but like "Topsy," it "growed."

SHOOTING FOR A STAKE .- A cheaply printed dodger, thrust into the doorway of our office, announces that the Marion Rifle Club, of Marion, N. J., are to have a 'grand rifle match" with the Greenville Schuetzen Corps, of Greenville, N. J., for \$500. Knowing nothing about these clubs, and caring to know less about organizations who would degrade rifle practice into a mere scramble for stakes, we should say that there was something bogus about the affair, and the closing announcement on the cheap dodger that tickets of admission could be had at the gate shows what might have been expected, that somebody is keeping a keen eye for the dimes and dollars of the gullible ones. There certainly was a misapprehension when the scribe of the cheap dodger said that "Creedmoor targets and rules to govern the match." The whole purpose and effort of the National Rifle Association rules has been to keep rifle practice clear of the slightest tinge of gambling, and had these speculative shots followed the Creedmoor rule they would have stricken out the "stake."

DEEP SEA DREDGING .- It is only within a very few ears that deep sea dredging has been carried on to any very considerable extent, but in this short time it has given us some idea as to how wonderfully numerous and varied are the forms of life which inhabit these depths

where the temperature is arctic, and to which scarcely the faintest glimmer of light can penetrate. The opera tions of the Challenger, of our own Fish Cammission, and of Prof. Alex Agassiz, have been most productive, and the results have been of such very great interest that the completed reports of the various expeditions are awaited with extreme anxiety.

A brief report from the French vessel Travailleur from which a series of dredgings were made last summer in the Bay of Biscay, has been made by Prof. A. Milne Edwards. He states that during the last two weeks of July the weather was very good, so much so that they were able to dredge twenty-four times, sometimes using two dredges at once. The greatest depth reached was 2,700 metres, about 1,500 fathoms, and the least was over 300 metres, or more than 166 fathoms. The collections made were large, and included most of the species already described by the naturalists of Norway, Sweden and England, besides many others hitherto unknown. It is stated that the fishes, nemertians and sponges will be reported upon by Mr. Naillant; the molluses by M. Fischer; annelids, echinoderms and other zoophytes by M. Marion; joraminifera by M. de Folin, and crustacea by M. A. Milne Edwards. M. Perier has made numerous thermometric observations, and will make analyses of the sea bottom.

# The Sportsman Courist.

TIM POND.

EUSTIS, Maine, Sept. 2d.

IN my note of last week I spoke of improvements made by Kennedy Smith since my first visit here, which was in 1878. There then was one log camp; now there are four log cabins and one kitchen cabin, well provided with comforts. Then one boat was in use; now seven of different sizes and patterns invite the attention of those who seek the festive trout. Then, perhaps a dozen persons found their way to these waters for the year. But those who went then go each year now Duting August the camp register shows that fifty-five gentlemen and five ladies sought this charming resort, to test not alone upon the toothsome the trout and game, but the slame and five ladies sought this charming resort, to the seat not alone upon the toothsome the artheristing ozone of the forest and mountain air.

With a friend, have been here for their second visit. Gentlehnen all, whether casting the fly, seeking wary game, or if in the cabin or his parlor of taste and refinement. And just here let me say that such men—call them sportsumen, or hard-worked business men seeking recreation—left the proprietor to establish a most desirable "public sentiment." The feeling that provents persons from taking more trout or game than wanted for the table, prevents slaughter and returns to their watery home the small speekled unfortunates that are accidentally hooked. Kennedy Smith does not command this, but all receive the idea that he feels it, and it is strange how general is the sympathy and compliance. Not more fish are taken in the "season" than are spawned each year, for they seem as plenty as ever. But the question is, Can they be protected when the "law is on," and poachers "most do congregate" on the jee to fill their gaping sacks? The Fish Warden will see they are protected. And the law-breaker will be called on to pay "smart money" to the State. Not only this, but we are told the Fish Commissioners will simply large numbers of young trout to inhabit this pond of wonderful clear water, and trout of a flavo to see the antics at either end of the rod. The expletives from the reel end were numerous and conic. When at length the four were landed, two, I think. By the bal-suce, weighed about a pound each. B. beilowed, "I will give ten thousand dollars for this home of the festive denizens!" He went ashore in about two hours with twenty-seven as fine lish as one would wish to see. At once he sent back to the rest of their "brethren," "Come, for we have found the Promised Land." This must serve as a sample of the constant "good times" we had. Wish I could tell of one time, just at sunset, when the water fairly boiled with the swird of frolicking fish for quite a distance around. Believe me, then and there was fun, as well as frolic. Such a sight I never saw before.

Mr. Abbott, the popular principal of the Little Blue

School, at Farmington, with his wife, two sons and some of their pupils, found rest and recreation here during the summer vacation. This is getting to be a home-like place. Mr. Smith has his gentle wife with him to assist in cooking, etc. The table, aside from well-cooked game, has good variety. Partridges never were so plenty, and during the last two days have been brought to bag in large numbers. Yes, to us, certainly it is home-like: and there is a feeling of sadness as to-night we unstring our rods and prepare to leave to-morrow. We have traps set for bears that give plenty of evidence they are numerous. Others must take charge of these steel bear catchers. Their favorite places are thickly marked by the footprints of deer and cariboo. But duties' call us home, and we leave them to the tender mercies of venison steak lovers. Till next year all these sports, all this grand scenery, good-bye. School, at Farmington, with his wife, two sons and some

grand scenery, good-bye.

MEAD'S HOTEL, KINGFIELD, Sept. 3d.

I must add a word of two surprises. First, I am surprised to find here one of the best hotels for sportsmen and seekers for recreation I have ever seen. The proprietor, M. W. Mead, is from Boston, and both he and his excellent and efficient wife know how to keep a hotel, and they do it personally. About thirty guests can be accommodated at one time. Paint, paper and furniture are neat and fresh; beds are clean and soft, and every attention is freely given. The kitchen and table are in charge of Mr. and Mrs. Mead, and would afford credit to a first-class city-hotel. My second surprise here is to meet my friend Jared Goodrich, of Plainville, Conn., with a company of his "boys," on their way to Tim Pond. We voted the breakfast, including fresh trout and really juicy, tender steak, with all other "fixin's," the best we had eaten in Maine. I write this in the interest of travelers like myself, not the hotel. Mr. Goodrich left Bos-elest like myself, not the hotel. Mr. Goodrich left Bos-elest like myself, not the hotel. Mr. Goodrich left Bos-elest like myself, not the hotel. Mr. Goodrich left Bos-elest like myself, not the hotel. Mr. Goodrich left Bos-elest like myself, not the hotel. Mr. Goodrich left Bos-elest like myself, not the hotel. Mr. Goodrich left Bos-elest like myself, not the hotel. Mr. Goodrich left Bosjuicy, tender steak, with all other "fixin's," the best we had eaten in Maine. I write this in the interest of travelers like myself, not the hotel. Mr. Goodrich left Boston yesterday morning, arriving at Farmington about 5 P.M., and took the stage to this hotel last evening. This morning the stage takes him and his company to the farm house of Kennedy Smith, and I proceed to Farmington and Boston.

J. WARREN TUCK,

#### ALL AROUND NOTES

ALL AROUND NOTES,

Zanesville, Ohio, Sept. 13th.

Editor Forest and Stream:—

A few notes of observation during the close season from a sporteman who has been moving around in different localities may interest some of your readers. Game of alk tinks in Virginia and North Carolina is unusually abundant. In fact, everywhere throughout my travels I have observed that it has been an exceptionally good breeding season. During the summer, while over my old hunting ground in Virginia, I saw more coveys of young qualt than ever before; more, in fact, than one would suppose could subsist on the amount of ground. They could be seen in almost every door-yard and garden, and "Bob White" was heard in different parts of every field throughout the land, seemingly happy that dog and gun had for a time at least ceased to wage war upon them. To witness the confidence these poor persecuted birds place in human nature during their breeding season can but reach the heart of the most obdurate pot hunter. Wild turkeys have also had a favorable season, and many flocks of young ones may be seen feeding in the grain fields in the early morning or in the evening. I succeeded in catening one with the assistance of my dog, but the dog squeezed it a little too hard, and so weakened its constitution that it only lived a few days. "Ole hars" are very abundant, but a wise provision of Providence has balanced matters by an equal plenty of their enemies, foxes and little "niggers." Some friends of mine being auxious "to shoot soutething," we went down to Shinnecock Bay for snipe the latter part of August. I always had an idea that Lane's was the only place worth going to on the bay, but discovered my mistake. We found his place full; could not even feed us and lodge us out. Hungry and tired as we were we had to seek other food and shelter, which we at last found at the Foster House at Pond Quogue, where we were introduced to a family of five brothers, sil guides and gunners. "You pay your money and take your choice." The time and service of thes

ing our bad luck. We kept our eyes and tase year, and like true philosophers learned all we could.

We were quite entertained one evening by a couple of lovers, young and proportionately sappy. I don't believe they were lovers of field sport, but of that beautiful sentiment that makes two hearts beat as one, when "in singleness of vision, beauty reigns supreme." They unconsciously seated themselves very close to us, and after the usual formula and several satitutes customary on such occasions, she said, in the softest little whisper:—
"George, don't you want another cigar?" He,—"No, my dear; I have smoked two."
She,—"But, George, I do love to do things for you. I'll go get one for you."
Presently her liand somehow touched his, when she exclaimed:—

Fresently her land somehow touched his, when she exclaimed:—
"Why! George, how cold your hand is. Are you cold, dear? Let me warm your hand,"
After warming his hand, and not being able to warm him up to the right degree, she asked him for the other hand to warm and put in somewhere in the lace on her breast, holding it tightly and securely in its warm nest with both of hers. George thawed, his disengaged arm

went round her waist, and he commenced to compliment went round her waist, and he commenced to compliment her "points" individually and collectively, especially her "sweet and beautiful neck," when she exclaimed, "Why, George, do you know when we came out from bathing, that horrid Miss — wanted to kiss me on the neck? But I told her she shouldn't do it, as that was private property. Only for you, Georgy, dear, and no one else." A suspicious cough interrupted further billing and cooing, and next morning "private property" was an expression which seemed very apt on several occasions, much to the mystification of all the guests but two. Now all this sort of thing seemed quite funny to us poor, lone gunners. We don't exactly understand it, and take the liberty of asking your advice: How would you like to be in George's place, and what should we do if we ever get in such a fix?

To those who don't know of other places than Lane's,

if we ever get in such a fix?

To those who don't know of other places than Lane's,
I would say, there is lots of accommodation at various
houses at Pond Quogue, and I believe just as good
ground. Plenty of shooting, if the wind is sou west.

# Matural History.

—Address all communications to "Forest and Stream Publishing Company, New York."

FOOD OF OWLS AND GARPIKE, -Our friend Mr. R. O Sweeny, of St. Paul, writes us that he has recently made some discoveries in regard to the food of the animals above mentioned—or, as Mr. Sweeny puts it, has made two discoveries in fish lore. One is that owls will eat fruit, and the other that garpike are fond of wasps. The food spoken of is eaten with relish by both bird and fish and not especially because they are hungry, but because

Our correspondent has both owls and garpike in confinement, and has thus been able to study their tastes.

California Fishes.-We have received advance sheets of proceedings of the United States National Museum containing "Notes on a collection of fishes from San Diego, California, by David S. Jordan, and Charles H. Gilbert. The authors spent the greater part of the month of January, 1880, in the collection and study of fishes at the point named, in the interests of the United States Fish Commission and obtained some specimens new to science as well as established the fact that many known species are found there. Fifty-seven nominal species are given, all from salt water, four of which are new. Also in the same is a "description of a new flounder (Xystreurys liolepis) from Santa Catalina Island, California, by the same. Also. "description of a new ray (Platyrhina triseriata) from the coast of California." "Description of a new species of 'rock cod' (Sebastichthys serriceps) from the coast of California." "On the occurrence of Cephaloscyllium luticeps (Dumeril) Gill, on the coast of California."  $the \,oil\text{-}shark\, of \,Southern \,California\, (\textit{Galeorhinus galeus}),$ all by Jordan and Gilbert, "The surf smelt of the Northwest coast, and the method of taking them by the Quillehute Indians, west coast of Washington Territory," by James G. Swan, "Notes on sharks from the coast of California," and "on the generic relations of Platyrhina exasperata," by Jordan and Gilbert. "Remarks on the species of the genus Chirus found in San Francisco market, including one hitherto undescribed;" a "description of a new fish from Alaska (Uranidea microstoma);" a "description of a new species of Agonidae (Brachyopsis verrucosus), from its coast of California," and a "description of a new genus and some new species of California fishes (Icosteus anigmaticus and Osmerus attenuatus),' all by W. N. Lockington. Mr. C. A. White gives a "description of a very large fossil gasteropod from the State of Puebla, Mexico," and Jordan and Gilbert give a "description of a new species of ray (Raia stellulata), from Monterey, California;" "descriptions of a new species of Xiphister and Apodichthys from Monterey, California :" 'description of a new Agonoid fish (Brackyopsis ayosternus), from Monterey, California," and a "description of a new flounder (Hippoglossoides exilis), from the coast of California."

THE HEARING OF FISHES.—A letter from the late Prof. Agassiz, on the subject of the hearing of fishes, dated Nahant, Aug. 8th, 1855, contained the following: "I Agassiz, on the subject of the hearing of fishes, dated Nahant, Aug. 8th, 1855, contained the following: "I hold it would be a blessing—I mean fortunate—for many an individual to hear as distinctly as most fishes do. That they do hear is not only to be inferred from the very complicated pair of ears they possess, but may be directly ascertained, as I have often done, by frightening them by noises under circumstances when they cannot at the same time see. What may mishead us with reference to fishes having that organ of sense is the fact that, though the external ear is very perfect, they have no tympanum nor external auditive conch. But, as hearing consists in the perception of sonorous vibrations, these may strike the head and produce the sensation of a sound without passing through the auditive conch, as in the case of deafness, when people open the mouth to perceive sounds through an internal canal leading to the ear. This is a rough diagram of the ear of most fishes (a sketch): ab e, the semi-circular canals, very similar to those of man; d, labyrinth: c, sack containing the ear-bone, which, set vibrating by the sonorous motions of any body producing the sensation of hearing. The whole is in the back part of the skull.

"So much for the hearing of fishes. You may see the apparatus very readily, by cracking open the skull of lands."

#### BREEDING QUAIL IN CONFINEMENT.

READINGTON, HUNTERDON COUNTY, N. J., Sept. 7th. Editor Forest and Stream:—

1 have been thoroughly interested in acquainting myself with the successful attempts of Mr. Benbrook, of Raritan, Somerset County, N. J., in raising qualis in confinement. I have noticed in several papers, FOREST AND STREAM included, a brief notice of the fact; but I think the matter of sufficient interest to warrant more extended notice. I called yesterday to see Mr. Benbrook, and found him busy in constructing a house for their confinement and security. And just here I would like to offer a suggestion and also to state a fact. First, the fact. Mr. Benbrook above the feasibility of rearing qualits; for the following prove the feasibility of rearing qualits; for the following ment and security. And just here it would nike to ofter a suggestion and also to state a fact. First, the fact. Mr. Benbrook labors against great odds in his attempt to prove the feasibility of rearing quality: for the following reasons: he is a person of very limited means and cannot at all afford such an expenditure as is required in order to secure the birds against accident. He has not lost a single bird from disease, but all he has lost has been from exposure to the numerous enemies with which they are surrounded, but which could be successfully overcome by proper protection: but this demands what Mr. B. cannot afford. If there was any profit in it, the matter would be very different; but it is all outlay and no income, and were he not so thoroughly interested in and devoted to the accomplishment of his purpose to prove that birds can be (so to speak) artificially propagated and our country stocked with them, just as our streams are stocked by artificial means, he would no doubt have abandoned the attempt before this time, requiring, as it has, such unceasing care and constant watchfulness and no inconsiderable expense. And now let me offer a hint which my readers have already no doubt anticipated. Is there not, among the many wealthy sportsmen of our country, some one who, in the interests of the experiment, will come to the relief of Mr. B., and furnish him with such an 'outfit as is really necessary in order to complete success? I suggest this upon my own responsibility and without Mr. B.'s knowledge. If I had the mean's levould freely assist him, and give him a fair opportunity to prove the practicability of his scheme. I am heartily in sympathy with the efforts, of late years especially, to improve the various strains of bird dogs. Dog shows, field trials, etc., are all in order; but if, with the increased excellence of dogs and the multiplication of sportsmen, the birds should become so searce, as they have already, in a great many localities where they formerly abounded, of what practical utility is

of sportsmen, the birds should become so scarce, as they have already, in a great many localities where they formerly abounded, of what practical utility is the keen-mosed pointer or setter. The value of the dog depends upon the abundance of the game.

But I have digressed from my purpose almost entirely, which was to state the present facts with reference to Mr. Benbrook's quail hatchery. He has learned from an experience of between two and three years how to care for the birds with reference to diet, mating, nesting, batching, etc., and I venture to suggest that his experience is worth more than any one's else in our country, at least in these respects. Among other things perfect quiet on the part of strangers in the vicinity of the birds is a matter which he considers positively essential, and yet he will go among them himself without creating any alarm. It is really wonderful, knowing this natural shyness of the birds, to see him take them up in his hands when only a week or more old. From one pair he has now, after two summers' laying, twenty-eight birds and more eggs in process of incubation. There seems to be no difficulty in getting the hens to lay. I think he told me that they had laid this summer about 200 eggs, and they are laying yet, but do not seem inclined to set. So he has been compelled to provide an unnatural mother in the diminutive bantam. But here we have altogether too much weight upon the eggs, and after such of tenders, the little fellows have to run the gauntlet of a fussy, noisy, scratching foster-mother, who flies at every living thing that cornes near her almost, at the great danger of trampling the little things to death. And here I am anxious to test the virtue of an incubator, but I have none and Mr. Benbrook has none. Who has? and who will provide one in the interest of the experiment?

But I must close. Will any one of the Westminster Kennel Club, or any other club, take the trouble to run up to Rarian, on the C.R.R. of N. J., and take a look and convince the history and the par

convince themselves?

If an incubator will hatch the eggs, I believe Mr. B If an incubator will hatch the eggs, I believe Mr. B. can with his present stock, next summer, rear 1,000 full grown, acclimated birds, and then after that he can supply, in the following spring, all clubs desiring to stock such localities as they may prefer. Any one who will devote a few hours to a run up to Raritan, on the C. R. R. of N. J., can see for themselves, and I have no doubt will return with the conviction that our lively little game bird can be so successfully propagated as to revive the good old times when a covey could be flushed in any stubble.

PARVUS.

CLEVELAND, Ohio, Sept. 18th.

In July, 1879, I purchased a pair of common qualis
for the purpose of breeding, which was a failure, the
birds not mating. During the winter and spring months for the purpose of breeding, which was a failure, the birds not mating. During the winter and spring months they exhibited signs of mating. July the mating was complete, the female laying twenty-three eggs. After the seventh eggs-laying, two eggs a day for four consecutive days. After twenty-seven days of incubation (six days overtine was due to dry floor, which might have been prevented by the sprinkling of warm water upon eggs and nest on the twenty-first or twenty-second day), seventeen chicks were hatched out. The chicks are now one week old, and are now doing finely. The chicks are now one week old, and are now doing finely. The qualis are confined in an aviary, associated with other birds (song) in a room on third floor of building. The aviary is six feet square, thirteen inches high. Have placed four inches of fine sand upon floor for dusting purposes. Twice a week I renew coarse gravel for digestion. The gravel is kept wet by spattering of water from the other birds bathing. Qualis will not use dry gravel. Before, and during the laying periods, I fed the female houseflies, beetles, grasshoppers, mealworms and ants' eggs, the male reserving all to the female. Seeds: I fed kemp, Canary, rape, millet, wheat and buckwheat. Lettuce, grated carrot, sweet apple, and cabbage chopped fine, for green food, which is an important item, preventing the female from becoming egg-bound, a fatal condition. Also plenty of fresh water. Qualis are immense drinkers, would suggest to those having failed in having their

eggs hatch out chicks, to separate males and females one month or more previous to breeding month—July—the male will then be more ardent, I may add, that the male assisted during the nest-making process, after which, taking very little interest, however. On the twenty-first day he commenced to take an active inter twenty-first day he commenced to take an active interest, visiting the nest often. On the twenty-seventh I noticed that he had entire charge of the hatching, the female taking charge of the drying of chicks as soon as hatched. During the progress of hatching, both male and female remained on nest and still continued to do the same. Our feeding young quail have boiled eggs chopped fine, mixed with rolled crackers, mealworms and houseflies. They also have access to prepared food for soft-hilled birds.

BRADLEY HULL, M. D. D. D. S.

DUBUQUE, Iowa, Sept. 15th.

Mr. S. Root, a photographer of this city and an ardent sportsman, purchased a pair of quail last winter that had been trapped, and this spring he made a wire screen and placed it against a stone wall at an angle of about forty-live degrees from the ground, so as to make a place of about filteen feet long and three feet wide, and then put his quail inside. About three weeks ago the female made a rough nest and laid ten egges (one was unfortunately broken) and a few days ago five young ones were hatched. Mr. Root informs me that after laying the hen deserted the nest, and the made took full charge and sat on the eggs and hatched them out, and even now takes all the care of them, and at the first note of alarm from him they all run under his wings and hide. Mr. Root also states that when he first commenced to set on the eggs he appeared frightened whenever any person came near, but after a few days would get very angry and raffle up his feathers, but would not get off as formerly. Mr. Root is very fond of his pets, and next year is going to have a larger place, and put in a unmber of pair in separate apartments, as his idea is that they will not breed if all put in together. I shall watch his experiment with a great deal of interest.

FISHWAYS, AND NEW YORK LAWS THEREON.

Rome, N. Y., Sept. 9th.

Editor Forest and Stream:—

Rome, N. Y., Sept. 4th.

Editor Forest and Stream:—

There is a story told of a man residing in Paris, during the past and frequent changes of administration of government in France, who made an agreement with his landlord, to pay a certain sum per week for lodging, and an extra sum to awaken him every morning and tell him what form of government he was under for that day. Any one who has been trying to keep track of the game laws and the amendments that have been going on for the last few years, will appreciate the need of just such a landlord. As all sportsmen are assured who are acquainted with the characteristics of trout, know that in a lake these trout in the fall of the year go up the inlet and down the outlets into the stream to spawn, and to return again to the lake in the spring. By building a dam on an outlet of a lake, the trout in the fall pass easily over the dam into the stream and spawn, but are unable in the spring to return up to the lake on account of the dam. Editor Forest and Stream:-

easily over the dam into the stream and spawn, but are unable in the spring to return up to the lake on account of the dam.

In a few years, a lake which before the erection of such a dam abunded in trout, would be almost entirely destitude of them. I have just such a lake in mind, The legislature tried to obviate this difficulty by enacting in 1871 (Laws 1871, chapter 731, p. 30): "Every person building or maintaining a dam upon any of the fluvial waters of this State, which dam is higher that two feet, shall likewise build and maintain during the months of March, April, May, September, October and November, for the purpose of the passage of fish, a sluiceway in side channel, at least one foot in depth, at the edge of the dam and of proper width, with four inch square cross pieces upon the bottom of the sluiceway three feet apert, which sluiceway shall be placed at an angle of not more than seven degrees, and extendijis entirely to the running water below the dam, art spring and making it a penalty of \$25 tor each month's violations of the above.

Section 40, of the act of 1859, is deemed to have repeated laws of 1871, chapters 721 and 851, and the other laws following thereafter, which brings us down to game laws, of 1890, which say mothing regarding sluiceways in dams. Hence we are without a very valuable law, and I think too, one that the compilers of the game laws had no intention of removing. I had occasion to look this matter up, intending to have a certain owner of a dam comply with the statute, but I find that until the statute is again amended, he can erect a dam without a sluiceway, without fear or molestation of the law.

THE POUND-NET LAW.

#### THE POUND-NET LAW,

A Ta meeting of the Board of Supervisors of Suffolk County, N. Y., on Sept. 20th. Mr. Halsey presented a numerously signed potition of inhabitants of Sag Harbor for the passage of a law forbidding the setting of pounds, fykes, nets, etc., for fish or eels in the Otter Pond and Cove, or within one mile of North Haven Bridge leading thereto. On invitation, Wm. White, of Sag Harbor, was beard in advocacy of the law asked for. On motion, petitions were referred to the Committee on Resolutions, and Mr. Reeves, from the committee on Resolutions, and Mr. Reeves, from the committee on the subject and unanimously agreed to the report. The resolution was read, put on its passage and adopted, all the members present voting in the allimative:—

RESOLUTION NO. 24.

# RESOLUTION NO. 24.

As A or to present the taking of hish and cels in the Otter Pond and Cover to say He taking of hish and cels in the Otter Pond and Cover to say He taking to the town of Southampton Thou sutherity to pass this resolution is found in Chapter 482 ohe laws of 1875. It was passed sept. 21st, 1880, by a vote of two-fhirds of, all the members elected thereto.

The Board of Supervisors of the County of Suffolk do enset as

The Board of Supervisors of the County of Suffolk do enact a follows:—
SECTION 1. No person shall fish for or catch or take any fish or els, in any pound, tyke or net, nor set or draw any pound, fyke or net, in the county of t

T. H. Couwis, Cierk. JOHN'S. HAVENS, Chairman.
Mr. Reeves, from the same committee, reported adversely up the petition of residents of North Sca and vicinity for a law to forbid the setting of seines, fykes, or set nets in North Sea Harbor and the channel thereto during March, April and May. The report was adopted, and the committee discharged from further consideration of the subject.

Dr. Garlick's Book .- We learn that while the book. which we noticed in our issue of 16th inst., was in the hands of the printer, some one stole out all the portion relating to the famous Bachman controversy, and the letters of Prof. Baird on this subject, and the author being an invalid did not discover it until the whole edition was bound and he had received a copy, which necessitated his re-writing it, and having the entire edition rebound in order to get it in its place.

Comment upon such an act is unnecessary, and we

think the man who did it, capable of stealing acorns from a blind sow. The Doctor merely wished this to appear as an act of justice, and to show that there was no longer any misunderstanding between persons who in the search for truth had taken other paths. A slip of the pen in the notice made us say, "The angling portion of the book gives no notice of the black bass, white bass," etc., when we meant to say that it did give some account of them.

How the First Shad Were Hatched.—"Aquadale Pond," Wenonah. N. J., Sept. 17th.—I noticed in your issue of the 16th inst., the communication of Mr. Seth Green, referring to mine, upon "Shad hatching and Shad Laws," and expressing a desire to be informed of the name and address of the "old fisherman" who first hatched the shad at South Hadley Falls. For the information of Mr. Green and others interested, I will make the following statement. During the latter part of last May I visited South Hadley Falls to make an examination of the fishway attached to the Holyoke dam, and to obtain such general information as I could, in regard to fish matters at that point and vicinity. While making some investigations in the city of Holyoke, I referred to what supposed was the fact, that Mr. Green hatched the first shad at that point. I was surprised upon being informed that an old shad fisherman at the Falls was the man who first succeeded in the attempt. I asked his name, and was informed that it was "Smith." (I presume Mr. Green may have heard of that name before.) There appeared to be two or three gentlemen in the group, conversant with the facts, but I know none of them. I had in my pocket, however, a letter from E. A. Bracket, Esq. one of the Massachusetts Fish Commission, which contains the following paragraph: "C. C. Smith of South Hadley Falls, is as well informed in regard to fish in the river as any one I am acquainted with." Having learned from others that the shad fishing at the falls was in the lands of "Capt, Smith," I concluded he was the man retains the following paragraph: "C. C. Smith of South Hadley Falls, is as well informed in regard to fish in the river as any one I am acquainted with." Having learned from others that the shad fishing at the falls was in the hands of "Capl. Smith," I concluded he was the man referred to by the different parties, and having occasion to call upon him the same day, I referred casually to Mr. Green's success in hatching shad there. He at once replied that Mr. Green's attempt was a failure, and then repeated what I had already heard at Holyoke, and substantially what I said in your issue of Aug. 20th, the father of Capt. Smith being the old fisherman referred to. I believe he has been dead some years.

The following clause in my former article, viz: "I believe he fare clead some years.

The following clause in my former article, viz: "I believe he fare credited with the method, and Mr. Green should have been further qualified, and Mr. Green should have been credited with the method, and Mr. Smith with the idea of the proper location. Mr. Green claims that the hatching was done in theriver, but either himself or Capt. Smith and the others there have forgotten the location, and passibly other facts.

THE FIRST DECADE OF THE UNITED STATES FISH COMMISSION,—In our report of the paper read by Prof. G. Brown Goode before the American Association for the Advancement of Science, Boston, Aug. 28th, in our issue of Sept. 2d, there occurred an error which we now take pleasure in correcting. What Prof. Goode said was depleasure in correcting. What Prof. Goode said was depleasure in an indebted to Prof. Verrell for the following estimate of the number of species added within the past ten yeurs to the fauna of New England, mainly by the agency of the Commission:—

Formerly Known,	Additions.	Now Know.
Pvenogonida	10	15
Annelida	238	305
Vermes 39	100	339
Mollusca 317	109	420
Echinodermata	41	88 55
Anthozoa or Polyps 20	35

Mackerel. Far South.—The Charleston, S. C., Newsays: "On Saturday last, while the crew of the fishingsmack Hannah E. Thompson were fishing on Black Fish Banks, off the bur, they struck a school of genuine down East mackerel, and succeeded in taking one of them. None of them have ever been seen south of Cape Looiout. It is possible that the confusion, which seems to agitate the State of Maine, may have driven these fish teach the seclusive and quiet waters of the South Atlantic, The specimen taken is a perfect beauty, about 12 inches in length. The same fishermen also caught an unusally large sea-robin or flying fish."

THE ALEWIFE IN FRESH WATER.

ROCHESTER N.Y., Sept., 16th

ROCHESTER N.Y., Sept., 16th.

Editor Forest and Stream:

During recent visits to several of our inland lakes. I have made discoveries which may be of interest as well as beneficial. I have discovered that the alewife, commonly called "saw-bellies," breed in our inland lakes. I made this discovery while drawing a small mianow net for bait, and drew in the young fry of this and last spring's hatch. This discovery I consider very valuable, as there is no better food for all kinds of fish, and cancellally the salmon trout. I would advise all parties in able, as there is no better food for all kinds of fish, and so-pecially the salmon trout. I would advise all parties increased in any inland lake to procure them and stock their waters. They are a more valuable food fish than the fresh water herring or young whitefish, because they are a spring spawning fish, and breed much faster. Their spawn is not more than three or four days in hatching, whereas the fresh water herring and whitefish are fall spawning fish, and their spawn is all winter in hatching, and the fact of their being so much longer expresed makes the percentage which hatch very small. As all kinds of fish feed on them, and unless they happen to be cast in a spot where they will receive the small. As an kinds of that the dot them, and unless they happen to be cast in a spot where they will receive the proper circulation and keep free from sediments, they will not batch. The alewife hatches at least one thousand young for every one of the fresh water herring or whitelish, and their value as a food fish is inestimable. In Lake Kenka the "saw-bellies" were put in eight rears ago and there is an abundance of them, and has been for the nast few years.

whitefish, and their value as a food fish is inestimable. In Lako Kenka the "saw-bellies" were put in eight rears ago and there is an abundance of them, and has been for the past few years.

To show that all kinds of fish feed on them, I have aught, with them for bait, salmon trout, black bass, rock ease, perch, pickerel and bullheads.

I have also learned in what depth of water salmon rout are found at the different seasons of the year, and lso the time of day they feed. During the months of April, May and June they are found out in deep water at all depths; in April and May mostly at the top; through fully and August, and first of September they are hardly wer caught, except within a few feet of the bottom, and when the atmosphere and water begin to cool off in the latter part of September they commence to rise to the surface again, and in October and November are on the shoals and reefs, casting their spawn. During the spring they can be taken from sunrise until about noon, and during July, August and its of September, from surrise until alout 10 o'clock, and one hour before sunset. On a recent trip to one of our inland lakes, "saw-bellies" being very hard to procure I was obliged to open every trout caught in order to obtain bait. The trout—as, in fact, do most all fish—swallow their food whole, and the "saw-bellies" were not so badly mangled but what I could put them on my hooks. It was through this means that I learned when the trout ted during July, August and its of September. In their stomach was found the food which had been taken for latee days, in three different stages of decomposition. The trout which were caught from daylight until 70 clock had no fresh food in them, while those caught after that time and until they stopped bitting at about 10 o'clock had no fresh food in them, while those caught after that time and until they stopped bitting at about 10 o'clock had no fresh food in them, while those caught after that time and until they stopped bitting at about 10 o'clock had no fresh food in th

BLACK BASS IN FLORIDA.—Rixford, Fla., Aug. 11th.—
Tell St. Clair if he will visit me I will allow him to take bass from ponds that I have stocked, that I do not think he will cail anything else but the "large-month black bass" and if not satisfied with that, he can capture in the Old Sawanee River, the small mouth species. Now that river does not empty into the Atlantic, but the St. Mary's does and there he can capture as fine ones as were ever tooked. If still he doubts he can go to lake Sante Fe and take them there till he is tired of the sport. In the Neuse river, North Carolina, they are plenty, and the fishermen call them Weishmen. In every other place South where I have taken them, they are called "trout," and they bear to a casual observer a striking resemblance to the speckled beauties in our Northern streams, as they lie motionles in the water. Of course the illusion is at once dispelled when they are lander.

GEO C. RIXFORD.

Don't Care Much About Fishing.—Last Sunday one of our Sunday school superintendents, on his way to church met, a boy with a fishing-pole. "Where are you going with that pole?" asked the superintendent. He had not seen the boy since the last time he filled up at a Sunday school picinc. "Please, sir, I've got a wicked father, who sends me out to fish every Sunday morning; but as soon asl get out of sight of the house I am a going to play hookey, and come to Sunday school."

Vermont Pishing.—Pouliney, Vt., Sept. 15th.— I promised to write when I left Ulster and Delaware counties last May. I started in fishing at this place for trout, and found them small and hard to get, not catching more than 100 in five different times I went a fishing. After doing so well in New York State, I concluded that this kind of fishing would not suit me, so I gave it up in discust.

this kind of fishing would not suit me, so I gave it up in disgust.

Bass and pickerel fishing is good, and has been all summer. Perch can be caught from sunrise to sunset. I have caught 200 in five hours' fishing—others have done a great deal better. This is a very pretty lake, and is fed altogether with springs, and a desirable place for lake trout. This could be made one of the finest fishing lakes in the United States. All that is necessary is to stock it, and make a heavier penalty than there is for netting or spearing them, which I have no doubt is carried on extensively at certain times. Mr. B., of Philadelphia, caught a 5-pound pickerel that had the marks of where he had been speared. Let the authorities look into this matter, and stop it before it is too late. I hope also to see the Fish Commissioners of Vermont take an interest in stocking this beautiful lake, and making it second to none in the northern county. Squirrel shooting is excelent, partridges and woodcock quite plenty, and we are lawing plenty of sport, Any one desirous of coming here

can leave Grand Central Depot at 11 a.M., ticket to Poult-ney, drive three miles to lake, and stop at Lake View House, Mr. P. J. Griffith proprieter, and I will guarantee a cheap trip, good time and plenty of sport. H. C. West.

MAINE NOTES.—Eustis, Maine, Sept. 20th.—Here I am again at mine host Hutchins', where I can enjoy myself much and at less expense than at any place in Maine I have ever visited. Have returned to-dup from a two weeks solourn at Alder Stream Pond, and such nice, deep-red fleshed trout, and in such abundance. I never before saw. A good, nice camp and boats, a beautiful lake set in the valley of the "Five Round Mountains," like a "jewel set in the hosom of Hebe."

Mine host Hutchins has just completed a road from his place to the famous Spencer Lake, a region entirely new to sportsmen, and the route embraces twelve lakes and ponds, all full of the nicest salmon trout, while moose, carriboo, ducks, deer and partridge abound all along the route. Should any of your patrons wish for rare sport, a letter of inquiry to friend Hutchins will tell them all the particulars and just as they will find them. Address O. A. Hutchins, Eustis, Franklin County, Maine, More when I arrive at Boston.

J. M. FITCH.

\*\*Grandling\*\* of Black Bass.—Warsaw, Ind., Sept. 20th.—In reply to "G. F. W.," in POREST AND STREAM of Sept. 16th. I would suggest "bucktailing" for the larger species of black bass in Webster Pond. I have found this allure effectual when all else has failed, at the same time offering the most pleasurable and scientific mode of modern angling. The construction of the bucktail or buckly is as follows: Tie three bass hooks at right angles from another. Tie three bass hooks at right angles from another. The the hair of a deer tail around and completely covering the hooks, allowing the hair to extend an inch below the hooks. Use by easting same as with any other bass fly. This in the hands of an experienced and persevering follower of "Old Ike," success is certain.

"Old Ike," success is certain.

—Bass fishing at the St. Clair Flats has been uncommonly fruitful this season, and from this time until the middle of October the punter natives of the region will be in high feather. The bass are extra large, many that I have seen scoring from four to jsix pounds. Two that were shown me to-day weighed each six and a half pounds. They were caught by J. V. D. Eldredge, of this city, whose achievements with both rod and gun in former years are matters with which many of your readers are well acquainted. All fishermen here who have observed the Flats' yield say that no such season as this has been known since 1870. Parties from Louisville, Cincinnati, Atlanta, Cleveland and elsewhere have been enjoying the glorious sport for a week past, and Detroit has turned out every fisherman who could spare a day or two, bent on the same fascinating sport. Col. Valentine C. Hanna returned yesterday from a three days' excursion to the Flats, during which time he caught over two hundred pounds of the finest bass seen in one lump in a generation. Seventy-five to one hundred pounds a day is not an unusual catch for industrious workers. A. C. McGrav, a well known Detroiter, who carries his seventy-six years as lightly as a boy, went up for a half holiday on Thursday last, and caught twenty large bass, every one of which was a legitimate capture. We hope to clother.

A Big Bass for a Snake to Eat.—A correspondent writing from South Verson, Ind., tells us that while fishing he killed a large water moccasin which had a suspiciously large bunch inside it, which on opening proved to be caused by a base of fully half a pound in weight, certainly a large fish to swallow, and a prickly one, too, which ought to cause a fit of indigestion, but it is more than doubtful if it did.

Weakfishing on the Coast of New Jersey.—Riverside House, Forked River, Sept. 24th.—Weakfishing still contines good, a daily eath of fifty per boat for the past week. A party from the lighthouse eaught yesterday, fishing outside, 262 weakfish, some of which would weigh nearly 4 lbs. Several gentlemen still linger here enjoying the sport, among whom are Wm. H. Hewitt, Win. Henry Brown and Jas. R. Townsond, of New York. No bluefish yet. ing the spor Henry Brown bluefish yet.

AN EIGHT AND A QUARTER POUND TROUT.-The following letter from Messrs. A. B. Shipley & Son, fishingtackle dealers, Philadelphia, explains itself. The fish is to be mounted by a taxidermist, but would be so much better preserved by the Wickersheimer process that we

better preserved by the Wickersheimer process that we always regret to hear of a fine fish being stuffed:—

SOULE'S CAMP, Maine. Sept. 20th.

Messrs. A. B. Shipley & Son:—

I suppose by this time you think I have forgotten you, but to-day I have the pleasure of sending you a trout (Salmo fontinatis) that weighed eight and a quarter pounds when caught. I took him on a fly-rod and played him an hour and a quarter. As you wanted a good sized one for mounting I send the fish at once.

JOHN A. SCHULZE. Rangeley, Maine.

JOHN A. SCHULZE, Rangeley, Maine

THE "REDDING" TROUT FLY.—A new species of fly has been found to inhabit the fly books of anglers in Calhas been found to inhabit the fly books of anglers in California and is occasionally found disporting itself at or near the ends of their lines. Of this new fly the Olympian says: "This fly has been made by a fishing tackle dealer in this city, and named by him after B. B. Redding, one of our State Fish Commissioners. The Redding deer fly has the hair of the deer wart reversed on the upper part of the hook so as to open when drawn through the water. The lower part, or body, is made of green peacock herl."

MILLION FISH HOOKS .- The Germantown graph says: "The only firm in the world that is said to make fish-hooks by machinery is located at New Haven, Conn. They received an order the other day for five million hooks from New York, The order is reported to have been sent by the editor of FOREST AND STREAM, who is auxious to take a tilt at the St. Lawrence bass."

All right, neighbor; when they come we'll ask you to go along, if you'll dig the worms

# ECHOES OF THE "DITTMAR SPORTING POWDER,"

Elmira, N. Y., Sept. 26th.

Editor Forest and Stream:— ELMIRA, N. Y., Sept. 26th.

I have just finished reading your exhaustive article on the "Dittmar Powder," for which many thanks, I was indebted to your subscriber and correspondent, Dr. T. S. Up de Graff ("Bodines") for the privilege. J. B. C.

Editor Forest and Stream:—

I have read your "Dittmar Sporting Powder" article, and take pleasure in saying that I like it very much. The general plan you have adopted, viz., to begin at the bottom and build up in a solid and gradual manner, so as to make your readers see clearly the reason why Dittmar powder must be dangerous, is just the way and the only way. You have done nobly. I look with much interest for the balance of your article.

X.

NEW YORK, Sept. 25th.

Editor Forest and Stream:—
I must thank you very heartily for your excellent article published in this week's Forest and STREAM on the "Dittmar Sporting Powder." If every lover of the gun would consider what he is using and the danger he is placing himself in by using this explosive, there would be fewer shattered guns, hands and heads. Fact is fact: truth is truth, every time. Warn the sportsmen and you are doing your duty.

Yours truly,

E. H. R.

New York, Sept. 25th.

Editor Forest and Stream:—

I have read the article on "Dittmar Sporting Powder," in your issue of the 23d inst., and take great pleasure in thanking you for exposing the qualities of said powder. I have used the powder to some extent, fortunately with no accident; but it is needless to say that I shall never dare to use it again. I believe that I never saw any account of the explosion that occurred at the office of the "Dittmar Powder Manufacturing Company" (No. 2. Am I right); some time since, in your paper. Would it not be well to refer to same in your future article on the powder? Again congratulating you upon exposing the dangerous compound to the public, and especially to the sporting fraternity, I remain, yours very truly.

S. A. Editor Forest and Stream :-

### [Extracts from a letter dated Sept. 13th.]

Mr. Nash gave us very little information about the loading of the exploded shell, beyond the charge, and on the other hand the Dittmar Company gave us about as little about the powder in the can; for it is impossible not to agree with you. Mr. Editor, that their experiments proved nothing. The dauger of powder depends mostly, perhaps entirely, upon the speed with which the pressure

is developed, instead of the actual pressure itself. And I don't believe it possible to construct anything in the shape of a gauge that c'n properly test the strain on barrels caused by too sudden evolution of gas. It is a great pity that the company could not have experimented on some strong musket barrels, or something of the sort.

Mr Dittnar should have no hard feelings against Mr, Nash, or any one else. The question is too important to allow business interests to have a feather's weight of influence. He should be thankful for criticisms, and do his best to remedy defects. It is the duty of any sportsman knowing defects to point them out, and the duty of sporting papers to publish them. At this age of the world the presumption is generally in favor of anything new, between the presumption is and should be against anything new. Every such thing must expect to fight its way into favor, and its owners should respect that conservatism which demands positive conviction before yielding, the should be against anything the such as the source of the convergence of t

#### DOG POISONING IN MINNESOTA.

Windom, Minn., Sept 20th, 1880.

Window, Minn., Sept 20th, 1880.

Editor Forest and Stream:—

The letter of "Wausee." from Fairmount, this State, dated on the 1st inst., and recently published in the Formers and Stream, escaped my notice until to-day, and that you will allow one of the "pot-hunters of Windom" space for reply I assume, and in doing so I find it necessary to ask you to reprint the following portion of "Wausee's" letter :-

etter:—
The recent wholesale polanning of bird days in Cattornecod Theorems, and the equitocal tone of the local pross divisibly the funda theorem in repeat thereto, are still topics for peculiar interest to non-resident sportsmen in Minnesata. True, the peculiar threats to non-resident sportsmen in Minnesata. True, the peculiar threats to non-resident sportsmen," are now changing their to example of Windom, many of whom chuckled ever the discomitture of "them donly sportsmen," are now changing their to example the peculiar sportsmen, and the sportsmen is a submethable bilander, for the owners of value of the sportsmen is a linear period to the peculiar sportsmen in the particular sportsmen in the peculiar sportsmen in the peculiar sportsmen in the peculiar sportsmen in the spo

during the hinting scason. In this State the chicken season begins Aug. 15th. On the 10th of that month some seven or eight dogs belonging to citizens of Windom were poisoned—by whom, or through what motive, remains yet a mystery. About he same time dogs in a neighboring village met a smilar fate, I am credibly told. A day or two before the 15th the "non-resident" sportsmen came. On the following Wednesday a dog from Memphis died about two miles in the country, and a day or two later a St. Louis dog was poisoned in the Clark House barn. Hence it will be seen that the Windom sportsmen are the principal losers of dogs, poisoned, as many firmly believe, in the interest of "non-resident," but for various reasons I will not assert that the theory is correct. But it will be seen that war was begun first, in a "wholeade" way, upon our own bird dogs, while "Wausee" attempts to show that the "wholesale" poisoning was directed toward the dogs of the visiting sportsman, who only lost two; and I have no doubt the Memphis dog ate the poison that was laid for the Windom dogs. Poisoned meat was tound in the yards of several residents, as well as near the dead St. Louis dog, and one dog died in the very door of its owner.

The effort of "Wausee" to cause it to appear that this

St. Louis dog, and one dog died in the very door of its owner.

The effort of "Wausee" to cause it to appear that this unfortunate and disreputable business was indorsed and condoned by the people of this community, or the news paper in question, is as "dastardly" as the poisoning itself, but "Wausee" is aware that his party was not warmly welcomed, and evidently is trying to "get even" with us by false representations.

"The business men," etc., will "miss the ready cash," will they? How 'lamentable?" True, they patronized one hold and two livery stables. No one closes aw them "lavish" their "ready cash," and one noticeable feature with those "visiting" sportsmen is that they bring their ammunition with them, and even try to pay their hotel bills with birds shot with arumnition bought elsewhere. So much for the "ready cash" they "lavished" in Windom. This is the extent of the business they gave the fown, and had it been practicable "Wausee" and his friends would have brought with them their hotels and liveres also.

liveries also.

Any of the "non-resident" sportsmen are in ill odor for the hoggish manner displayed in their hunting birds for market, thus making the country over which they hunt help bear their expenses while here, and sending the money out of town for the very material with which the

birds are shot

money out of town for the very material with which the birds are shot.

The money the farmers receive from such men as "Waussee" will create no desire to see them return. Farmers complain seriously at the ruthless manner in which these "non-resident" sportsmen trespass upon their growing crops, which this year have proven slight barriers to their frequently driving through fields of fax and "letting lose the dogs" of sport, and when remonstrating against it the farmer is repulsed with profanity. These are by no means isolated cases. In another instance, a farmer by the name of Pickett, was shot in his own field by one of these "non-resident," "money dispensing," gentiemen, who coolly drove off without apologising, not however, without begging the farmer not to return the compliment with a rifle he had in his hand at the time.

return the time.

If "non-resident" sportsmen are not cordially received in Windom it is for faults of their own, of the character indicated, but the least intimation that their dogs were poisoned on account of any such unfriendly feeling, is ridiculuously and criminally false. The local sportsmen regret the poisoning, and depreated it as much as "Waussee," and none more than the writer, and we hope your correspondent will yet learn that the people of Windom are too brave to wreath their dislike upon men by such mercless attacks upon innocent and defenseless dogs.

Sportsmen have come and goue, and will return again next year, while others have gone, we hope, not to return until they learn to treat the country will ordinary respect. Every sportsman who comes with anything in his breast like "doing unto others," etc., will be cordially welcomed, as dozens who have been here this year will attest, and theso are they who "lavish" their "ready cash" among the "business men." in the sense "Wausse" implies,

### MINNESOTA FIELD SPORTS.

MINNESOTA FIELD SPORTS,

Editor Forest and Stream:—

My brief article in your issue of Aug. 19th has brought me several letters from widely separate points, asking for information relative to the country. As I have no axe to grind, and as all the letter writers claim to be sportsmen good and true, and withat subscribers (as they should be) to the Forest and Stream, I ask space in your columns for a few particulars.

This town, Burnhamville, is the eastern town of Todd Country, being wholly on the western side of the Mississippi River, and about one hundred and forty miles from St. Paul. No railroad enters the county, Little Falls and Sauk Centre being the nearest railroad points, Little Falls being twenty miles from this town and Sauk Centre thirty. The eastern part of the county is principally timber, but with fine stretches of praine and many line meadows. The soil is excellent. The county, especially the eastern half, fairly blossoms with lakes; some with high bold shores, others with marshy borders. I am living at the outlet of Little Swan Loke, a beautiful sheet of water about one and threquarter miles long by one-half mile wide. Three miles above is Big Swan Lake, nearly three times as large; the two are connected by Swan River. Three miles southwest are Bass and Long Lakes, about the size of the Swans. Two and three miles south are Buck and Moose lakes, a trife smaller. Three miles north is Rice Lake, which is merely a large marsh, its surface nearly covered with wild rice. Big Swan has also large rice beds.

There are also many pond-holes and marshes. All of the lakes abound with fish, every variety almost being found save trout. Spring and fall the duck shooting is grand; but few geese comparatively are found hereabouts. I presume, in fact I know, that tons of venison was killed here last hunting season. Bears and wolves are not "thick," but more or less are killed every year. As for rabbits, fifty a day, in the winter, would not be a large bag. Being off the railroad, sportsmen never find their way he

swears or gets drunk, wishes to enjoy himself, this is the place where he can have the utmost pleasure.

Hon. Loon Houde, of Little Falls, and Hon. C. M. Loring, of Minneapolis, have been in camp for two days at Long Lake, two miles from here. They report the finest bass, pike and pickerel fishing they have ever experienced. Mr. Loring caught fifteen fine fish, one of them a pickerel weighing fifteen pounds, in one morning before breakfast.

Ducks are flocking in in abundance: Rice Lake is reported full of them.

J. F. LOCKE.

#### ALL ABOUT WILD RICE.

RICE LAKE, Sept. 23d.

Editor Forest and Stream . -

As the subject of wild rice is receiving a great amount of attention from a number of your readers, perhaps the following will be of benefit to a few of them:—

When wild rice becomes ripe in the fall, the seed drops from the stalk into the water, and immediately sinks to the bottom. Here it lies all winter, perfectly dormant, until the following spring, when it begins to sprout about the sid of May, and reaches the surface about the middle of June, according to the depth and temperature of the water. For a month it seems to grow very slowly, but, after that, its growth is wenderful, and about the 1st of September it stands two to twe inches above the surface, and the seed, getting ripe, commences to fall into the water, and continues doing so as long as there is any grain left upon the stalk. The old straw is torn up by the wind, and floats away or sinks to the bottom.

In Rice Lake the Chippeway Indians have the exclusive privilege of gathering the wild rice—the modus operand is as follows: An Indian kneels in the bow of his cance, generally a dug-out, and draws it through the rice with his paddle; a sunw, seated at the stern with a small light cedar stick, the shape of a martine-spike, about three feet long, in each hand, draws the rice toward them with the stick in one hand until the heads are over the cance, when she strikes them a couple of quick light strokes with the other stick, knocking the seed into the boat. Upon doing this she lets go the rice, and repeats the operation upon the other side, the cance going all the time. In this manner they will gather two to five bushels per day, according to the crops.

That wild rice is the favorite food of ducks I am quite certain; and, were I possessed of a pond or lake, to which I desired to attract them, I would plant it in preference to anything else, It is quite hardy, and, with a little care at first, will grow almost anywhere. It has been grown successfully in the Ottawa River, and Dr. Everhart, President of the Lackawana Game Protective Association, I be

### HOW TO SOW THE RICE.

The proper conditions for the successful growth of wild rice areas follows: Two to four feet of water, if soft, warm and free from minerals all the better, soft muddy bottom; it will grow on sand and gravel, though it will be thin and stunted for a couple of years, but at the end of that time, if undisturbed by wind or current, the accumulation of old straw at the bottom will form a mud bed and a good crop of rice will be the consequence. Five years ago, the first time I ever camped at Rice Lake, I put up tent on Spooka leland; all around it there was a hard, sandy bottom, and about thirty feet from shore there was a thin line of rice, about twenty feet wide, through which I used to swim to get to the clear water beyond when bathing. This year the rice was so thick and heavy the Indians were gathering there.

Weeds and moss will retard its growth somewhat, but it Weeds and moss will retard its growin somewhat, out it generally crowds out other water plants. When once started it is impossible to eradicate it, except by pulling it up when young or drowning it out with ten or twelve feet of water; also, it will spread in every direction and will get so thick that a person can hardly paddle a canoe through it.

through it.

After being thoroughly soaked in plenty of soft water it is planted as follows: Two men go in a boat, one padding the other sowing in the old old-fashioned manner of sowing grain by hand. If the pond is exposed to heavy winds or strong currents sow thickly; if sheltered and free from current sow thinkly; if sheltered and free from current sow thinkly, as it will spread more winds by daine so.

quickly by doing so.

Blackbirds are passionately fond of it in the milk state, and tame geese are simply "terrors," sometimes cleaning out a whole bed. Keep them out at all times.

When Rice From Rice Lake, Ostario,—Many inquiries reach me about procuring and growing wild rice. Through your columns I state a few facts which may serve as a general answer to correspondents. In 1876 I bought from Charles Gilchrist, Esq., of Harwood, several bushels as an experiment, and sowed the same in a bay on the Ottawa Kiver. The following antumn it grew to a height of from six to eight feet, and was full of grain, which enabled me to gather about twelve bushels for use elsewhere. Since then I have renewed the sowing occasionally and kept up the growth. This full I intend sowing some twenty or thirty bushels more. In addition to its utility as food in the shape of rice bread or cakes and pudding, this plant has wonderful powers of cleaning and cooling the temperature of water and muddy bays. It is such a strong feeder that it absorbs the principal part of the nutriment on which rank weeds subsist, and which in solution accumulates to form a caky coatine of mud in marshy bogs. It also grows so high and thick as to shelter the water and keep it cool. I consider it one of the most valuable aids in fish ponds for the above reasons, as well as because it breeds and furnishes great quantities of insect food for young fish. Of course its value as an attraction for ducks is well known. The stock gathered at Nice Lake is of the finest kind, and being attended to by an active and intelligent man like Mr. Gilchrist, it is well prepared for shipment.

W. F. Whitchen. WILD RICE FROM RICE LAKE, ONTARIO, -Many in-

Ridean Bank, Ottawa, Sept. 16th.

Kidean Bank, Ottawa, Sept. 18th.

A Companion of Porester.—New York, Sept. 23d.—Editor Forest and Stream.—Will you allow me to call your attention to the death of Mr. A. L. Williams, of Candandaigna, which took place a few days ago. Mr. Williams formerly lived in Newark, and after that, in company with "Frank Forester," William S. Porter and other famous old sportsmen. He was a model sportsman in every respect, a thorough good shot and fly fisherman, always scorning anything approaching pot hunting or poaching, and ever rendy to give the best place, either in the field or on the river, to a friend. Mr. Williams was a naturalist of no mean order, perfectly competent to set up a rare bird or preserve a fine specimen of a wild flower. Of late years Ralston, Pa., was one of his favorite haunts, and many happy day I have spent with him on the beautiful Lyconing. He taught me all I know in the way of casting a Hy for bass and trout, and also wing shooting, and for twenty years we have shot and fished together. As I said before, a truer sportsman or better friend I never knew, W. Holberton

or better friend I never knew, W. HOLBERTEN NEW YORK-Windsor Farm, Broome County, Sept. 11th.—The shooting seas of has opened with good prospects. Have been out three days since Sept. 1st for grouse. Bagged in all twenty-two grouse, and squirrels are more abundant than they have been for several years. This morning I killed six woodcock. They are through moulting, and have settled down upon their old grounds. A few ducks have passed in their flight South. Yesterday I bagged two black ducks and four teal on the Susquianna River. Fishing is also good. Perch and pickerel readily take live bait or strike for the spoon hook, and bass are as hungry as ever. The lakes and ponds about here are in good condition, and sportsmen are having average luck in these waters. With a friend I fished an hour and a half in the Susquehauma, one day last week. The catch was cleven black base, weighing fourteen pounds and a half. I have captured a number of walleyed pike recently in the Susquehauma, the armound of the several years but few have been taken, are returning to our waters.

Powher Measure.—Editor Forest and Stream:—
I notice on page 11, Vol. 15, a "Member Montgomery Shooting Club," in attempting to correct a "Member Manchester Shooting Club," is nearly as wide of the mark as the gentleman he attempts to "coach." The pound Troy is divided into ounces, pennyweights and grains. There are no drachms in Troy weight. The pound apothecary, which is the same as the pound Troy is differently divided into ounces, drachms, scruples and grains. The pound avoirdupois, which is different from either of the above pounds, and is that by which powder and shot are always weighed, is divided into ounces, drachms and grains, viz., twenty-seven and one-third grains make one drachm; sixteen drachms one ounces sixteen ounces one pound. If your correspondents will weight their charges by this table they will correspond with the standard measures. The grains are same in all weights. weights.

OUR DETROIT LETTER.—The season is fairly upon us, I Our Detroit Letter.—The season is fairly upon us, but the lingering heat of summer which makes memorable these fervent September days is a handleap for the devotees of the gun. Nevertheless, many mighty hunters are seen in the gathering places of the tribe hereabout, as they filt into town on their way to the north woods of Michigan, where "the red deer and roebuck abound." I have of late noticed on the streets many well accounted and enthusiastic sportsmen thus bound. Weither heat nor tales of ill fortune deter them, and you may expect with the first grateful change to hear entertaining tales of their achievements. New York City and State are well represented in this influx of woodmen.

Of purely local matters I may mention the fact that that prince of sportsmen, Ed. Gillman, accompanied by Dr. Fred Anderson, formerly a well known Cincinnation

and now a summer dweller on beautiful Grosse Isle near the mouth of Detroit, go down to Point Monillie Club grounds next Monday for a hack at duck shooting, stirred to the venture by yesterday's receipt of as pretty a lot of blue-winged teal as I have ever seen. They were killed by hospitable Jack Jardine, and have already found their way to the broiling griddle and thence to the more particular enjoyment of fhose lovers of gamy flavor who frequent the headquarters of sportsmen who find a more particular enjoyment of flosse lovers of gamy flavor who frequent the headquarters of sportsmen who find a field of operations in Michigan. Duck are now very plentiful and the kill for a week last past has been such as set the blood tingling and made business cares irksome, C. A. Mack, of Detroit, hos struck it rich on the plantation of a friend about thirty-five miles from Louisville, Ky., on the Short Line Railroad. The aforesaid plantation is literally alive with quail, but being a private preserve your readers who do not enjoy the acquaintance of the reigning baron will, I fear, be obliged to content themselves with a week's shooting there in imagination, How friend Banks would revel in it if he could snatch the time from looking after the substantial but sordid affairs of Forest and Stream.

JUDITH BASIN. - One of our soldier correspondents sends these notes on Judith Basin :-

which Col. Pickett and Mr. Massiter were two years ago. On clear days one is able to "stand and mensure the earth." From some of its points. The changing hues of the nountain sides at different hours of the day is enough to fill the soul of a Hottentot with poetry. And then the fish and game—elk, mountain sides, deep, deer, antelope and all kinds of fowl. In the swift waters of its rivers the gamiest kind of trout. I say no more, but only hope that some one will go there that can tell "all about it, and how it is done." The best way to reach there is to go to Benton, via Missouri River, and there see Dennis Halpine. He will either go himself or furnish men that will, and see about horses and all that sort of thing. A moment ago I spoke of narrating facts. I heave one at you. On the 2d of this month, being out of meat, I started out hunting, and on my way back to the hills I went across a bare alkali spot. On this spot I found a medium sized rattlesnake. Thinking to have a little sport, I pulled the ramyod out of my gun and commenced poking him. Snakes do hiss! for this fellow did so twice. Sabe?

Arthur Haight.

QUEBEC—Montreat, Sept. 13th.— In company with friend C. C. Beatty, of Phillipsburg, P. Q., I spent the first two days of the open season at the mouth of the Missisquoi River, and in the surrounding marshes, where we bagged a few black duck, more snipe, less woodcock, and caught about forty bass (small-monthed). My plensure was somewhat dampened by our big-footed "Canuck" cook, who tread on and broke my 12-ounce Serberrol. I sentit for repairs to its maker at 8t. John, and veceived it back to-day as good as new. During the past week I have shot over most of the best ground and water up the Ottawa River as far as Buckingham, Quebec, but to luttle effect, as the "Pot Hunter" was ahead of me in August. We have plenty of game laws, but so far they are almost a cipher. Sept. 1st. the grass and weeds along the small process in the Missisquoi marshes were trodden down by men and dogs who, during Auweeds along the, small creeks in the Missisquoi marshes were troulden down by men and dogs who, during August, had been running down the unfledged ducks that had bred there. If the directors of our game protection societies would take as much interest in enforcing the game laws as they do in getting up grand annual dinners, we might expect at least a portion of the laws put into effect.

STANSTEAD.

A PISTOL ATTACHMENT.—Waterville, N. Y., Sept. 11th.
—On reading your article "Pistol Arms," in the FOREST AND STREAM Sept. 9th, p. 110. I thought such a pistol, with my son's brace attachment, would make an arm just with my son's brace attachment, would make an uniquest perfect. Did it ever occur to you that in shooting a pistol the thumb of the right hand has nothing to do, and that it might play a very important part in that act. I presime not, but about a year since that idea made so strong an impression in the mind of my boy that he carried out the idea in actual experiment, applying one to a revolver, and with it he could beat all the gumners in our vicinity. It is simply a brace for the thumb. Just imagine about one-third of the bowl of a teapoon placed on the side of a pistol, just at the right point to receive the ball of the thumb. That is, in short, the idea. The brace is so hinged, and attached to the hammer, that when the arm is discharged and the thumb taken off, the brace is folded up against the side of the pistol, and when cocked again the brace is thrown down ready to receive the thumb.

thumb.

Now you have no idea how much firmer a grip can be obtained by a use of the thumb thus, than without it. It such a pistol as you referred to is to be made, Ishould like to know the address of the party, to open a corresmence on the subject.

It, S. B.

BUFFALO NOTES,—Sept. 20th.—Plover in large numbers are being shot on the river and lake beach in Canada. James Rafferty, and a party of genflemen from Wyoming County, leave this week for lowa, where they will introduce themselves to the prairie chickens. Blackbird shooting on Strawberry Island and in Cherry's marsh is affording plenty of sport for those who seek it. Alois Vincent has had his old gas-pipe straightened for the fun. William Christian and Henry A. Roy, of this city, and members of the Audubon Club, left for the far West last week for a two weeks' hunt. It will be their fault if they don't have good luck, as they have taken with them one of the best broken and stanchest dogs in the city, loaned them by his owner, John DeWolf, Esq.

PENNSYLVANIA NOTES .- A correspondent of the Germantown (Pa.) Telegraph, writing from Bellefonte, says that the work of the sporting club there has resulted in an increase of game and fish. Deer, and black and grey an increase of game and ish. Deer, and black and grey squirrels are numerous this year; pheasants and partridges abundant in the Alleghenies, some distance from Bellefonte. The same papersays that black-bellied plover are more abundant this fall than for a number of years. They have made their appearance in large numbers in Chester County, where they have not been seen, except here and there a scattered bird or two, for over thirty years. They seldom go so far from the scacoast.
Sourse they are always to be found at this season
ower Delaware, and portions of Maryland and No

FIVE QUESTIONS ANSWERED.—Charleston, S. C., Sept. 20th.—Editor Forest and Stream:—1. Will you please settle the controversy (if you can) in regard to Dittmar powder? 2. Is it dangerous to life and limb? 3. Has any gun, beside that of Dr. Nash's, been burst by this powder? 4. Why has it not burst my gun? 5. Or others of reliable make?

Ans,-1. We have settled it. 2. You can judge for yourself. 3, Yes. See our editorial columns. 4, There is a special providence, which, according to the proverb, watches over children blind men and fools To these three must now be added a fourth : users of "Dittmar Sporting Powder." 5. Dr. Nash's gun was of reliable make for black powder. Please define "reliable" with reference to the Dittmar compound.

Who Can Tell Him?—Elmira, N. V., Sept. 26th. A game note in last week's issue reads: "Two New Haven gentlemen, during three days, are said to have killed at Essex, Conn., over 1,00 birds (rail). One day's score for one of the party was 218 birds on the tide, with but

one gun."
Having had at least forty years' experience in rail shooting, the above interests me, and I am tempted to ask two questions, which seem pertinent:—
First, How long a time do they shoot "in the tide" at

Second, Do rail rise singly there, or in flocks?

I. B. C.

ALABAMA—Mobile, Sept. 18th.—The first hunt of the season is thus recorded: Major Jas. C. Bush and Col. C. A. Holt returned vesterday from the first hunting trip of the season. Their bags showed seventy-five doves and twenty-five partridges. Gen. W. S. Goodall also contributed his share of good marksmaship. Major Bush says the partridges he killed were old enough to take care of themselves, and that he gave them every chance possible to escape, disdaining to shoot them on the ground or in a tree. We know the members of the Gulf City Gun Club will at some future time tender their appreciation of the Major's gallantry in the field, which he has always shown before the traps.

Massachusetts—Speacer, Sepl. 18th.—The members of the Sportsman's Club of this town are industriously practicing for the annual hunt, which comes off in a few weeks. Reconnoitering parties are daily skirmishing in every direction, all meeting with more or less success in bagging game of almost-every description, from a gutter snipe to a barn yard fowl.

PENNSYLVANIANS' GAME GROUNDS.—Pittshurg, Sept. PENNSYLVANIANS' GAME (BROUNDS,—Pittsburg, Sept. 24th.—If I understand your correspondent he wants to know of good hunting grounds for quail and grouse within 200 or 300 miles of Pittsburg. Now, good quail shooting will be hard to find in this locality, but one cannot go amiss for grouse, as all our wooded hills are full of them. For both I think Ohio, after the close season for quail ends, Nov. 15th, is the best field near us. West Virginia is good for grouse, and probably Green and Washington counties are the best grounds near Pittsburg.

I. R. S.

BAY SAIPE SHOOTING.—Good tround, L. I., Sept. 22d.—At Shinnecock Bay there is good shooting at late bay birds, and we expect them right along. Mr. H. H. Thompson, of the Eric killed fifty-four in two mornings' shooting, mostly plover. We look for good shooting at big yellow-legs and plover now for three weeks or more. Duck shooting will commence Oct. 20th. I think the chance looks good. WILLIAM N. LANE.

Texas-Indianola, Calhoun County, Sept. 15th.—Season very wet and game very scarce. A few flocks of blue-winge I teal and broadbills are a riving. Fishing

New Hampshire—Nashua, Sept. 6th.—Open season for partridge September 1st, but it has been so hot that few have been out. Pigeons are said to be pienty in the towns about here, but it is too dry for woodcock, and they have disappeared.

FLORIDA—Tumpo, Sept. 17th.—The rainy season is about through here, and quail in abundance. I own fifty acres of land within a mile of Tampa, and know of six different covers on my place. One of our sportsmen killed young mallard duck in the vicinity of Tampa last week full of pin-feathers. The supposition is they bred they br here of course.

MINNESOTA—Pillsbury,—If any one thinks of coming here for duck shooting this full, then the sooner the better. If for deer shooting, be on hand Nov. 15th. A week's notice and my tean would be at Little Falls. If this is not sufficiently explicit, and any one writes for more information, do, please, inclose postage (all who have written neglected to do it), for ministers are never very flush with money.

J. Frank Locke.

NEW YORK—Albany, Sept. 21st.—Woodcock very abundant this year. A party of four of us went out on a two days hunt, Sept. 1st. We found patridges very scarce, and bagged three woodcock to every partidge. Our friend Billy Gough went up the river on Saturday last and bagged eleven blue-winged teal and the service.

WEIGHT OF WOODCOCK AND QUAIL.—New York, Sept. 16th.—Please give me weight of heaviest woodcock and quail shot in America. E. T. B.

The heaviest reported woodcock and quail ever shot in America, it is safe to say, were not actually weighed, but guessed at. The note-books of our readers must contain some data on this point, and we shall hope to have CONNECTICUT LAKES.—Our correspondent, "Rangifer," writes that has had "a most delightful summer in the woods, being seven weeks and more at the Connecticut Lakes. Shot a moose, a big enough bull, whose head I managed to save. I hope soon to avail myself of your invitation to write something for the paper."

ROBINS.—A score or more of correspondents are informed that the New York gun law, as amended in 1880, permits the shooting of robins after Oct. 1st.

—"Au Sable" has promised us some sketches descriptive of Canadian shooting excursions. Those who have read our correspondent's frequent contributions, will welcome these with interest.

BEST ON RECORD .- Our correspondent, "En Garde," sends us the following score of a match at glass balls, shot by the Dans-ville Sportsman's Club and the Rochester Gun Club, at Rochester. N. Y., Sept. 16th; 18 yards rise; 20 balls each:-

DANSVILLE SPORTSMAN'S CLUB.	
Drake	
Warkley 19   Williams	1/
Sweet	I'
Porr 19 Jeffrey 20 Hyland	
noroms	
Total	1.6
ROCHESTER GUN CLUB.	
Oothout 18 Adams	20
Summer 20   Raymond	If
Stearns 21 Butler	20
Amsden 18 F. Ward	
H. Ward. 20 Bigelow	17
T - 4 - 1	2

on record?" The proportion of balls broken, it will be observed, is 90 per cent, and, if we cannot affirm that this is the best on record, we are willing to advance the opinion that it is for these conditions, and we shall stick to it until suiticient proof is adduced to the contrary. But right here comes this report from the Raymond, Mass., Sportsman's Club, shooting at 200 glass ball-code, 100 double and 100 single from a rotary frap, other conditions. tions not given :-

													1	D	ou	tble.	Single.	Total.
C. A. Loud										٠,					. 9	10	99	198
R. A. Schaf	er														- 91	3	6.8	160
W. B. With	er	el	1.										ı		. 19	8	913	196
E. L. Johnson	on	١.									i				- 6	8	98	106
J. C. Smith.															. 9	7	97	191

The great difficulty in comparing different performances at the trap is the diversity of the conditions under which they are made, and the lack of sufficient data for just consideration of their respective excellence. In this case, for instant, "En Garde" has neglected to give us any particulars as to the style of the trap used.

The recent match between the Gulf City and the New Orleans Gun Clubs, at pigeons, 12 men each side, 10 birds each, 5 ground traps, 25 yards rise, Bogardus rules, resulted in a score of 100 to )8, and the shooters claimed the best score on record. To accord then this distinction, or to dony it to them, without a wast deal of trouble consulting both reports of matches, would it not be well for piegon and glass-ball shooters to conform their conditions to some set standard? Let us hear from some of those interested.

N. Shua, N. H., Sept. 6th.—Glass-ball shooting. The contest for old badge, to be given by the Captain of the club to the winner. gold badge, to be given by the Captain of the club to the winner, became the Thursday, 3 scores, 10 balls each, in straight, 10 rotary and legouble. Mr. Geo. H. Brigham, the winner in the last contest, being handleanged 6 balls, and Messrs. Bixby and Towner balls, Charles Williams was the winner, getting 22 balls, Bitkans 22, Bixby 13, Towne 19. The one winning the badge three times to become the owner.

to become the owner.

-Capt. Bogardus and W. B. Hauworth will shoot a match at \$1, Louis Ma., on the 9th day of October next on the following terms: 100 Higher byteon each, from H., and T. phings tunes, 21 yards rise, 80 yards bounds, Hilmois State rules to govern, for \$100 a side. 'W. B. Harnworth lately shot with Erb, of \$1. Louis, two matches, beating him both times, with the remarkable scores of 91 and 98, out of a possible 100, at good wild pigeons

GULE CITY GUN CLUB.—Mobile, Sept. Sth.—The regular monthly shoot of the club for the medal was held yesterday afternoon at the club grounds. The following is the score:—

#### THE INTERNATIONAL COLLEY TRIALS

O the Pennsylvania State agricultural society belongs To the Pennsylvania State agricultural society belongs the credit of having introduced, in connection with the International Exhibition, the first sheep-dog trials ever held in America. These competitions were arranged to take place during the closing hours of the State Fair, on the ground adjoining the main exhibition building, at Fairmount Fark, Philadelphia, and were witnessed on both days. Tuesday and Wednesday, Sept. 21st and 22d, by several thousand spectators. The arrangements were excellent and the society is to be congratulated in laving been able to place the supervision in such competent hunds as those of Dr. L. H. Twaddell, who not only was the original suggestor of the trials, but to him their unqualified success is mainly due. Early on Tuesday norming bulletins were placed around the building in conspicuous places, stating that the colley trials would commence promptly at 2 o'clock, on the south side of the building, and a little latter it was announced that the commence prompily at 20 clock, on the south side of the building, and a little latter it was announced that the following named gentlemen had been appointed and had agreed to act as judges: Mr. John C. Morris, Susque hanna County, Pa.: Mr. Lewis Lusson, Montgomery County, Pa., and Mr. John Dicky, Washington County

Pa. A glance at the entry-books of the fair showed that there had been fourteen entries, of which eleven were in the All-Age Stakes, and three in the Puppy Stakes. Sub-joined is the full list:—

# PUPPY CLASS.

PUPPY CLASS.

Prizes—First premium, \$50; second premium, \$25; third premium, \$10.

"George Aitken, Northport, Suffolk County, N. Y., dog Young Carlisle, black, white and tan.
Dr. J. W. Downey, New Market, Frederick County, Md., bitch Lady Scotland, tawny red.
T. S. Cooper, Coopersburg, Lehigh County, Pa., bitch Fannie, black, white and tan.
Long before the hour appointed for the start the building side of the inclosure was lined by an impatient and curious throng. The inclosure, which was about two hundred yards long by fifty yards in width, had been staked off, so that a moderately broad track encircled the ground. However, the fencing was of such a nature that there was nothing to hinder the sheep from leaving the track and invading the inner or outer plot. At the west end of the ground, in each bend of the course, there were two pens. It was the duty of each dog in his turn to take five sheep, selected at random from a flock of fifty or more, from one of the pens and drive them around the course, which was about a quarter of a mile in length, and pen then in the other. Flags were placed every thirty yards on the track, and the dog was ordered to keep between them. The sheep were Western stock, furnished from the Philadelphia yard, and a fresh lot were provided for each dog. In driving the dog was al-

lowed to bark or not, as might be his habit, but biting his sheep disqualified him at once. Each handler was allowed the privilege of taking his dog over the ground before the sheep were brought out, and he was permitted to precede or follow the sheep, as he saw fit, but he was allowed to precede or follow the sheep, as he saw fit, but he was bebarred from assisting stogs save by word or gesture. Hallooing, or noise, however, were considered to detract from the estimate of the performance, and while one dog was working no other dog was permitted to be present to distract his attention.

Shortly after 2 o'clock lots were drawn to see the order in 'which the dogs should run in the All-Aged Stakes, with the following result: First, Lad; second, Tweed II.; third, Oscar, and fourth, Tom. Lad, quite a good-looking, smooth-coated colley, owned by Mr. Taylor, started with his flock well in hand, but when he had gotten about a third of the way the sheep became unmanageable, and made a break through the crowd with Lad promptly after them. One, an old ram, however, slipped through a side-door into the exhibition building, while Lad brought the other four sheep back. When Lad went to get the ram things were lively up and down the asies of the building, and quite a rattling among the glassware they made. Subsequently they ran the gaunilet of the threshing-machines and root-beer departments, and as the ram was a plucky, stubborn brute, for a time it was a tossup whether the dog was driving the ram coming out of the building through a window, which saved many women and children the inconvenience of being knocked down and having to get up again, for while the ram was on his indoor raid his path was strewn with overturned spectators. Lad soon penned the four sheep, and the ram follower in stately grandeur. Time of trial, twenty-live minutes.

The second dog that put in an appearance was Tweed II., owned by Dr. Downey. This dog is a typical roughhaird colley, black and white in color, with a white frill on his chest. He is a goo

succeeding in effecting an entrance, but Tweed worked ahead of him and drove him back to the flock. At the upper end of the course the sheep got into a lot of straw under a wagon, and one was almost completely hidden. Here Tweed showed wonderful intelligence; he would bark at it and butt it with his head, and at last succeeded in dislodging all the sheep and driving them into the pen.

in dislonging all the sheep and driving them into the pen. Time of trial, twenty-seven initutes.

Mr. Cooper's Oscar was the third dog. He is a very large black, white and tan animal, of decidedly Gordon setter type. He was under excellent control, and evidently knew his business. Starting with the sheep from the pan, he fell in behind them and jogged them around the track until the lower side was reached, when there was a break, but Oscar worked the scattered flock' to gether and penned them in twenty-one minutes'

gether and pennet them in twenty-one minutes' time, amid much applause.

The last trial of the day was that of Tom, a fifty-four pound dog, owned bo Mr. Pugh, well known as a Philadelphia sheep driver. The immense practice Tom has had in the streets of the Quaker City, and the large flocks he has been obliged to guard and handle, aided by the tact of his master, made the work of driving the five sheep an easy task. It has been Tom's daily work to drive fat sheep through the crowded city to the butchers, and, to illustrate his wonderful proficiency, he on one occasion took 617 head from the Forty-Fourth street yard to Market street wharf, on the Delaware River, a distance of about five miles, and boated them all without the loss of one sheep, his master preceding the flock. In 1579 Tom turned up on the bench at the Philadelphia Dog Show, and won the special prize. He is a most valuable dog, a good, steady driver, wary of rushing, keeping wide of his sheep and under admirable control. When the bars of the pen were let down he quietly worked his sheep ns sneep and under admirable control. When the bars of the pen were let down he quietly worked his sheep out on the track and around to the home pen, in the most unconcerned manner possible. Twice they tried to break, but he had them together in an instant, and con cluded his task in eighteen minutes. His performance was duly appreciated, and three rousing cheers greeted him at the end.

him at the end.

On resuming at 10 A.M. on Wednesday morning, two starters were found in the Puppy Class. First, Fannie, and second, Lady Scotland, Young Carlisle being withdrawn. Fanny, who is fourteen months old, and owned by Mr. Cooper, had only been in the country several weeks, having been purchased by her owner with a splendid lot of Southdown and Oxfordshire sheep from Lord Walsingham, and was handled by the English shepherd who came over with them. Fannie worked her ten sheep clevely around the outside of the course, as was admitted in the puppy competition, and penned them in good style, She, like the rest of Mr. Cooper's dogs, showing more than a dash of Gordon setter blood.

Lady Scotland, out of Dr. Downey's bench show winner, Lassie, by Watts' Roy, a six months' old, tawny colored bitch, belonging to Dr. Downey then had her try. She worked her ten sheep half way over the course, when they broke away, but sile soon brought them back, and without further trouble penned them.

In the afternoon Mr. Bickney's Jo was drawn first, and he started his five sheep out of the pen and down the track. Half way down the sheep made a bolt through the crowd, but were driven back by the dog, but a moment later made a second dash, and the dog, set on by the spectators, became unmanageable, and bit one of the sheep, which at once disqualified him.

Mr. Blackhurst Shep was then put down, but his flock, upon being let out of the pen, wens down the course like a flash, with Shep a good second. At the end of the stretch they made a wild scattering break through the crowd, which caused more than our Fennsylvania farmer to rub the dust off his coat. And as nothing could be done with them, the dog was ordered up and ruled out. On resuming at 10 A.M. on Wednesday morning,

The following is the official placing of the dogs :-ALL-AGED CLASS

ALL-AGED CLASS,
Charles Pugh, Philadelphia, Tom, first prize,
Dr. Downey, Maryland, Tweed 11., and T. S. Cooper,
Pennsylvania, Oscar, equal second; divided second and
third money. (No other entries placed).

PUPPY CLASS

T. S. Cooper, Pennsylvania, Fannie, first prize, Dr. Downey, Maryland, Lady Scotland, secon (Other entries withdrawn).

#### DOG BREAKING

FROM VERO SHAW'S ILLUSTRATED BOOK OF THE DOG.

[Reprinted from advanced sheets forwarded to the Forest AND STREAM, by the author, through the coursesy of Messes Cas-sell, Petter, Galpin & Co., Publishers.] CHAPTER XXXVIII.

### (Concluded.)

### Breaking Sporting Dogs.

In the training of pointers and setters, care must be taken to give the puppies every chance of starting them, and by careful handling, and allowing them to see everything that will tend to make them hardy, and not gun-shy, as it is the worst thing that could befull the puppy. As it is they are too much pluck, many a

and by careful handling, and allowing them to see everything that will tend to make them hardy, and not gun-shy, as it is the worst thing that could beful the puppy. As he cannot have too much pluck, many a puppy is made gun-shy by being to much kept out of sight when being exercised, and not allowed his freedom to run about until five or six months old, when he can see everything for himself, and by that time he will be getting into trouble. But you may be sure he will be full of spirit, if he ever will have any.

Begin at first to lead him with a chain and collar, which he will object to most decidedly; but hold on to him, and bet him pull till he is tired out, when he very likely will think better of it, and follow you. If not let him seep a night over it and try him next day, and after a pull or two he will come pleasantly. By all means be kind to him at first, until you get thoroughly acquainted with his temper, and granting that his temper is not the best, although it is only high courage, which is the best merit he can have for the breaker. Then, presuning you have a kennel of dogs, attach him to an old one. If your puppy is a dog, put him on with one of the opposite sex, which he will follow with after a little coaxing. The next and greatest in importance is the shooting over him, and by all means be careful at first by snapping a cap. If I have a few puppies I take them all together, old dog and all, and when all running loose fire off several caps; but don't take any notice of your puppies, rather run on with them as though something of importance was on hand. The old dogs will a not all right here, I shall be off." At last, when he gets guite courageous, you must begin to learn him to drop to hand before going further with the shooting, presuming yon have added a little powder after they stood the cap trial. Take your pupil out, say after exercise, choosing a fine day and the ground dry, especially if a pointer. With a thrash cord, say thirty or forty yards, lead him quietly, where no one is likely t he remains at the spot. After a day or two at this, should he not take to it well, and after he knows what is wanted of him, use stronger means by giving a good cut with the whip. Then go to the end of the cord, should he lie tilt then, call him up, and if he does this well next time stop him half way. Then, when exercising, put your pupil on with a quiet, steady dog, who will drop well, and make them drop on the couples together. This he will not do at first, but will back off if he cau; but the old dog keeps him steady. Go up to him and drop him, and he will watch the others, when he will soon become as expert as the others. Also, use every day, when exerciseing along the road, your pistol with a little powder, and mind you drop your pupils every time, as by this time you will have got over their shyness, if they had any, so that they must drop to shot now. Should he at any time object to drop when out, next day put the cord on to him, and by a few sharp jerks make him drop at once, also come to your call when you want him, as there is really nothing will make a dog so obedient as the cord, and it saves ever so much of the whip. But let the breaker bear in mind he is to do all this learning by the gentlest means in his power, combined with firmness. Should he have to apply the cord often and sharp, he must speak gently all the time, so that the dog will come at once when told, and not frighten him at your end of the cord. Some are very headstrong to learn this, but when mastered are the most tractable. sharp, he must speak gently all the time, so that the dog will come at once when told, and not frighten him at your end of the cord. Some are very headstrong to learn this, but when mastered are the most tractable. Be sure that collar and cord are strong, as once a dog finds he gets breaking away he gives doubte the trouble, and is not to be depended on for a time. As often when your dog is about half way from you on the cord, he thinks this is a chance to run away. Should your cord break, then you lose the battle. Breaking your pupil perfect in the drop is half the work done, as the dog is under your command then, and is now ready to be taken to a large grass field, or if you have it a large piece of dry, marshy ground, where you expect little game. By this timey ou ought to know thoroughly the temper of your dog, whether you will have to be gentle with or have to keep a sharp eye on your pupil. Now, supposing he be of the former kind, let him range away at first of his own accord, and should he come across any game take no notice at first, but let him chase it; it will do him good, as after a few attempts he will see his folly, and will at the same time give him the zest for his work which he will require without which he will be nothing in the eyes of a good breaker. If of the latter sort and very plucky, keep a good eye on him, and should he enclined to chase when he comes across game, give him a taste of the whin, as with him a stick in time sayes nine. Now let be indeed to the down. good eye on him, and should be be inclined to chase when be comes across game, give him a taste of the whip, as with him a stick in time saves nine. Now let him down, as you know which of the methods you will have to proceed on, and hope you have a good stretch of ground before you. Let him go off by the words, hold up with a wave of the right hand. If a high-coutaged one he will not have to be told twice, as you will have found by this

time that his foundness for hunting lys given you a little trouble at home before now. Let him have a good fling all by himself, to work off the steam before he settled down to your signals by hand, which you must try and all by himself, to work off the steam have a perfect one, let no one be with you to take up his or your attention at any time: rather story your work for the day. Persuming by this time he is off to the right, be in no hurry to blow your whistle, as your likely and your old not mind if he is so full of work. Let him turn of himself, and when he is of full the perfect of the first few days until he knows what is intended to be done, when he will settle down steadily to you, when you will have a chance of getting him to work to your signals. Of course, all the time he has been down you have been your heart of you. I often find by sticking too close to a pattern in your. I often find by sticking too close to a pattern in your course of the perfect of you. I often find by sticking too close to a pattern in cross backwards and forwards in from your than the perfect of your and yourself, and he will run up to see what is up. This will encourage him likewise, and will do no harm. As this is one of the most essential points in dog breaking, great care must be taken with your pupil for the most perfect of the perf

let it be done firmly and don't flinch from your duty; it will save your pupil from many smaller and larger beatings afterwards. Some are always whip-whipping; that of itself would spoil a dog. This mostly applies to high-couraged ones, but many of the wilder type give the most trouble, and must be left a good deal to the discretion of the breaker. As for instance, many a shy, dog that will scareely stand a look of the whip at the kennel, will in the field, for an act of disobedience, take a fair share of it, and rather inprove him of his shyness than otherwise, stiways bearing in mind never to leave him until peace is made up between you. It is also essential that you keep at them every day, as they are quick to learn and as soon forget when only half way with their work; and in the end much ensier for yourself; for they quickly discern right from wrong, and who is their master. Nothing to my mind is more beautiful than a brace of dogs who quarter their ground thoroughly. This is only done by perseverance and using the signals of waving the arm across you, but to hark back when you throw off your brace of young ones. When they get their point, get up to them as quickly as you can, and if not well up to backing by this time—or some will do so naturally—have an attendant, and let him go up to the dog who has the point, and go youself to the one who backs, as he will require most attention from you at this time. Oo behind him and steady him. Should he not get into stiff, good form, advance a step with him until he gets a whiff of the game. Then keep him there if possible in his position. Let the attendant spring the game with the other dog. Then drop them. After a few minutes, sign to the attendant to go on with the dog to see if any arc left, you still keeping your dog down until he is satisfied there are none left. Repeat this until you are perfect. Another thing, do not depend to much for some time on either of them, but keep a strict watch on both, as until the second season very few young ones are to be depe

PENNSILVANIA FIELD TRIALS.—Pittsburg, Fa., Sept. 20th.—Editor Forest and Stream:—The following action of the Fennsylvania State Field Trials Association was had at the meeting of the association, held here on the 18th Inst. Inasonuch as the date fixed on at a previous meeting seemed to conflict with the N. A. K. C. Trials, it was unanimously resolved to change the Pennsylvania Trials to the 28th, 37th, 28th and 29th of October. The prizes in the various stakes are as follows:— All-Aged Stakes,—\$100 to the first, \$50 to the second, \$25 to the third; \$10 entry, \$5 forfeit; entries limited to 35 entries.

o 35 entries.

Pupp: Stakes.—\$50 to first, \$25 to second. \$15 to third; \$5 entry, \$4 forfeit: entries close with 25 entries.

Nursery Stakes.—Same as Puppy.

Association Stakes.—A piece of plate worth \$100, to be selected by the winner; entry, \$10; to be forfeited if not run.
All entries close Oct. 20th, or on receipt of the limited

An entries close out. Such of birteches.

I. R. Stayton, Secretary.

[Unfortunately the above was received at too late an hour to be published in last week's issue.]

A LETTER FROM MR. JOHN E. ROBINSON ON LAVERACKS.—Glen Villa, Ashbrook Runge, Sunderland, England, Sept. 1st.—Editor Forest and Stream:—I was
very sorry indeed to learn the "sad and miserable" end
of Pride of the Border. I have enjoyed many a pleasant
day's shooting over him, and can indorse all you state
about his good qualities as a field dog and also as a sire,
but wish to inform you that "Pride" was not got by "old
Blue Dash," but by "Fred II," which I am able to prove
by the English Kennel Stud Book, and also by my old Blue Dush, "but by "Fred II," which I am able to prove by the English Kennel Stud Book, and also by my old friend's (E. Layerack) own hand writing; how it is that Fride is entered in America as by Old Dash, I know not, but I have told several gentlemen in America that it is a mistake. "Fred II," was by "Fred I" out of "Belle II," (see Siud Book 1372) and of course was as well bred as any setter in the world, and although a sterling good dog in the field, yet not near so good as "Fairy," and how it is that "Fairy" has never been spoken of as a field dog since she arrived on your side of the water, is beyond ny comprehension, unless it is that she was too fast for your sort of country; at any rate on the Scotch moors she could beat Pride hollow; the latter was more of a partridge dog,

not being able "to go the pace," nor could he last anything like the bitch, he being too heavy and carty, especially for his breed; however, he has maintained the reputation and value of pure bred setters, by the quality of his stock (out of pure bred bitches), and now that Pride has gone. I regret more than ever the loss of "Flambean." which I sent to New York to take his place, and also that of "Pedigree." Had "Flambeau" lived, I believe he would have made the handsomest setter that ever crossed the Atlantic, and I would advise setter breeders that have pure Laverack bitches (especially blues), to breed them to "Aldershott," own brother to "Flambeau," being by my "Emperor Fred" out of Blue Cora (the late E. Laverack) by Blue Prince out of White Cora (the late E. Laverack) by Blue Prince out of White Cora (by Dash-Moll.

St. Louis Dog Show. -Dr. J. S. Niven, of London, Canada, has consented to act as Judgo on spaniels, hounds and non-sporting classes, at the Bench Show at St. Louis

ROCKAWAY HUNT,—Meets for October, 1880. Each date at 4:30 r.m. Saturday, Oct. 2d, at Kennels. Saturday, Ott. 9th, at Lawrence Point. Saturday, Oct. 9th, at Saturday, Oct. 231, at Wave Crest. Saturday, Oct. 30th, at Rockville Center.

IMPORTED DOGS.—Colorado Springs, Col., Sept. 21st.—Editor Forest and Streum:—I have recently imported from England a fifty pound boll terrier dog, also a wire-haired Scotch terrier bitch. I have also purchased from Mr. Owen Doyle, of Chicago, Ill., his famous bull terrier "fack."

C. W. CHURCH.

"Juck."

C. W. CHURCH.

Mr. Herzberg 'S Kennel."—A letter from Mr. Herzberg informs us that he intends passing some time away from home, and that he expects to devote much of his time this autumn in the field. Mr. Herzberg left Brooklyn last week, taking with him Aldershot. Patti and Polka. Boska will be sent to him about Oct. 1st, when she will have weaned her litter. Aldershot will not be in the public stud until the middle of December, and then only to approved bitches. We wish Mr. Herzberg the best of sport, he certainly has the tools for it.

#### THE BEST ON RECORD.

THE BEST ON RECORD.

Buston, Mass, Seyt, 11th.—Owing to the disarcreable weather which prevailed to-day, and the absence of many rithmen at Framingham and Creedmoor, only a small fattendance of long range men met to participate in the renewed competition at 800, 800 and 1,080 yards at Walnut Hill. The atmosphere was fairly clear, and a good gray light prevailed. The wind came from the routheast, infinite ting 4 to 6 o'clock, and in the early stages of the shooting gave no trouble. The spectators were numerous, and a few ladies graced the range in the afternoon. After the usual "builbeye" practice, Executive Officer Wilder assigned the men present to tarzet No.1, and promptly at 10 'clock, Erown, Gerrish and Wilder faced the butts. At 80) yards the shooting was exceptionally brilliant, Mr. Gerrish making a full score of 75, and nearly all "center bulls," Brown was caught by the wind on his flits shot, and saw the red disc appear, and closed for the splendid showing of 71. Mr. Wilder saw the "mag" on his thirteenth shot for poor holding and closed for 22. After lunch the shooting was resumed, and the ball opened at 900 yards, with the wind at 4 o'clock, steady and reliable, while the light had Improved. All

MR. GERRISH'S TARGETS

found the inside of the carron ring on their first shots; on the second shot, Mr. Wilder was beaten by "Boreas." At this stage of the shooting the wind changed for the first time from the old quarter and became quite cratic and hard to manage. Brown got a drop for a center, after making IT bullseyes. Again, on his fifth shot, he pot a close center at perfect elevation, with no change in his windage. At this time elevations; dwere watched sharply as the light became brighter. Gerrish was holding as firm as a rock, and shooting elegantly, sending his leaden bullets. constantly into the very center of the iris, and closing for another full score of 75, which made his total at this distance 30 consecutive bullscyes. At the 1,600 yards point the excitement began. The wind again changed a few points, and the atmosphere became unpleasant, owing to the smick banging like a pail over the firing points and between the targets. Gerrish, with his strong nerve and cool head, was recorded bullscye after bullseye, and, after making 43 consecutive bullseyes, with every indication of a full score at this distance. In got a center at 12 o'clock, and broke for the first time since he opened at 500 yards, having made the largest number of bullseyes on record. All eyes were upon Gerrish as he faced the butts for his last shot. It was indeed a trying feature, but again his coolness was visible, and he sent his last bullet find the center of the bullseye, and, differed by the Sharps Ridle Company for beating the record of J. S. Summer and J. F. Brown, 231, which heretofore has been the highest in a regular match. Cheer after cheer went up for this brillant achievement, and the waving of handkerchlefs by the ladles, e litting acknowledgment to the found the inside of the carton ring on their first shots; on the se

champion of the world at long range. The \*Globe\* reporter was the official scorer. It has heretofore been conceded by rillemen that shells which have been filled for a long time were unreliable. The shells used by Gerrish were part of them filled before he went to England, last May. Subjoined is the summary.

Wm. Gerrish. \ \ \ 800 \text{ yards} \ \ \ \ 5 \ 5 \ 5 \ 5 \ 5 \ 5 \ 5 \ 5
J. F. Brown \ \ \begin{array}{c} \ 800 \text{ yards} \ \ \ \ \ 5 \ 5 \ 5 \ 4 \ 5 \ 5 \ 5 \ 5
Salem Wilder , \ \ \ 800 \text{ yards} \ldots 5 5 5 5 5 5 5 4 4 4 5 5 5 5 5 5 5 5 5
In a letter speaking of his feat, Mr. Gerrish says :

"You have heard of my ammunition as being old, and that it had been exposed to a great deal of transportation, having been and used exposed to a great deat of transportation, naving used carried by me to England and back. But that was not all. Part of the shells used were entirely new and had never been firied, and about one-balf were old and bad been used by me about two years and had become somewhat crimped by continued firing. I used and had become somewhat crimped by continued firing. I used the old shelp at 160 yards and part way through the 600 yards distance, then I used new shells with an occasional old one for the remainder of the score. The old shells were loaded on the 6th of May last, my intention having heen to take them with me to England, but I finally concluded to get all new, so these old cartridges were left at home. The new shells were loaded on the 6th 16th of May with No.5 Creedmon, as were the others, but from different times, but from different keeps, bought at different times, and all through the score I could not detect any difference in elevation that might not arise from my holding or from the strength of the wind, which occasionally got to the rear. The light was good, but a little misty, though I could see distinctive, but Mr. Brown, who shot with me. sionally got to the rear. The light was good, but a little misty, though I could see distinctly, but Mr. Ilrown, who shot with me, said the light was not as good for him as that of the week previous, when he made 221 and I 28. I used the Winchester bullet 1-II with thick patch, 550 grains. I really made 46 consecutive bullesyes, baving shot 3 bulls in pool previous to beginning the

bullscyes, having shot 3 bulls in pool previous to beginning the score, and also shot 5 consecutive bulls after finishing my score, making \$2\$ bulls in \$3\$ shots.

My rille Is one I have had two years, and have used it continually during that time. It is chambered for a \$24-10 shell, in which I use 165grs. of No. 5 Creedmoor powder, of Lafiin & Rand man ufacture, over which I put a pasteboard wad, cut from the cases that contain the bullets, of which I inclose a sample. The bullet is scated in the shell about 1-10 of an inch, but hardly as much in a new shell. My rille has been rusted several times, and the rusphases is plainly visible near the breech, but I am satisfact is some that the seal and the probability of the first seal that is a seal that in a new shell. My rillo has been rusted several times, and the roughness is plainly visible near the breech, but I am a satisfied that it does not affect the shooting of the gun, but there is probably a point of rustiness that would. I have a strong suspection that the bullets have very much to do with the shooting of a rillo, and much of the complaints against rilles is either due to the shooter or the bullets. Many of my friends load their shells so that the wad is ilush with the end of the shell, and think that they get better results. I have tried both ways, and can see no difference. It may make a difference in a rillo not chambered exactly like nime. I think I have a very fine rifle; and all of us, who bought of the lot made in 1878, found that our old shells were interchangable, which shows a most perfect chambering. Summer, Jackson, Brown and myself had them at the same time, and we have made 220 and over—Summer twice, and myself twice. If you should wish to know of any other matters that I have not mentioned, I should be pleased to furnish the information. I sent If you should wish to know of any other matters that I have not mentioned, I should be pleased to furnish the information. I sent you my score last evening; an sorry I could not give two leaves—usi twas, it took the best blank leaf in my score book. (I mail, also, an enlarged diagram with numbers of shot.)

WM, GERRISH.

The following transcript from the score book of Mr. Gerrish, kept during the match, will explain the work of the day, in connection with the target diagrams, better than much text:—

RANGE AND GALLERY.

Bosron, Mass., Sept. 15th.—The long-range match at Walnut Hill to-day received a large number of entries. The wind proved troublesome, blowing from north to northeast, but notwithstanding this, most brilliant records were secured. Mr. Brown making the highest score ever recorded. This score has been tied but three times, by Messrs. Sunner and Gerrisb, but as Brown's record at 1,000 yards is the best of the three, he is en-

Boston, Mass., Sept. 25th.—The beautiful September day, which greeted the rillemen to-day at Walnut Hill, was all that could be greeted the rilemen to-day at Walnut Hill, was all that could be desired. There was not a cloud, and the wind was easily controlled. The Creedmoor target match had a very large number of entries, and magnificent results were achieved. At this distance, 200 yards, Messrs, E. F. Richardson and O. M. Jewell did some splendid work before the butts, each piling up the elegant score of 49 each out of the possible 50. Mr. Richardson took first position, outranking Mr. Jewell. Capt. Jackson, who did his first shooting at this distance since his roturn from abroad, followed the gentlemen closely for a good 47.

In the Massachusetts target match splendid work was done, Mr. Richardson again centing to the front each both man wasting the

Hit the Mussichusetts target innton spiennar work was none, arr. Richardson again coming to the front as high man, making the elegant record of 110 out of a possible 120. Six bullseres inside of a 4-inch ring at 200 yards out of 10 shots is very hard to beat: CREEDMOOR TARGET MATCH.

The winners of the general prizes in the Bunker Hill match were C. H. Russell and D. Kirkwood in the first class, and H. Withington and A. W. Webb in the second class.

Withington and A. W. Webb in the second class.

Woncesserik, Mass., Sept., 18th.—The Shrewsbury Ritle Clubvoted to accept all rules and regulations of the Massachusetts
Riffe Association. While objecting to the use of cloby or body
rest in our-hand shooting, it was voted to accept the same, so
long as sauctioned by the Association, but that all scores made
from the elbow and body rest should be so designated when pub-

tished.

We hope to see the same abolished both at Creedmoor and Walnut Hill. It is fast driving out of the field, as competitors, all
off-hand shots who do not desire to make contortionists of themoff-hand shots who do not desire to marke contortionists of them-selves. Others are obliged, by necessity, to adopt an unnatural position in order to stand any chance whatever—a few excep-tions, of course. It is conceded by those who use both positions that three points advantage is given by allowing the clow or body rest. Hoping to bear soon that the use of the rest has been abolished both by the National and Massachusetts associations, I remain, very truly yours,

UNION HILL, N. J., Sept. 21st—The United Schuetzen Cadets School, Pres. H.Reschen, celebrated their fourth anniversary with prize shooting, exhibition drill, maneuver and grand parade at the Schuetzen Park. The little fellows assembled in their blue the Schuetzen Park. The little fellows assembled in their blue uniform at their headquarters, 80 Hudson street, Hobbeken, in the morning at 8 o'clock and started, accompanied by delegations of several schuetzen companies, at 9 o'clock to the park by marching through several streets of Hobbeken. In the afternoon the park was crowded by the parents and friends of the cadets which came to see the mancurer and the parade, and were greatly surprised by the excellent tectics shown. At the shooting, 150 feet distance, with parlor rifle and off hand, the following were the best out of possible 54: C. Goerek made 38, M. Appel 35. G. Sehmoore 33, A. Walkaum 32, C. G. Engel 39, W. Yucker 30, H. Multer 29, H. von Bargen 28, A. Dehmke 27, H. Zurmuhlen 27, W. L. shmann 27, C. Bayer 27, J. von Ojen 28, C. Bahrenbrook 23, J. Steljes 25, M. Steljes 25, M. Steljes 25,

Stelles 25, M. Stelles 25.

BALTIMORE, Sept. 18th.—The attendance at Patapsco to-day was the smallest of the season. The match for the gold and silver ladges was terminated, A. F. Dreed winning first with 44, 46, 44—114, A. Roeder second with 45, 45, 43—133. At 69 yards W. H. Evans, W. H. S. Burgwyn and H. D. Coulson tied on 59 out of a possible 50, but had not time to shoot of the tie. Dr S. I. Scott was at the range for a short while late in the evening, but had not time to complete a score.

PITTSBURG, Pa., Sept. 11th.—Claremont Range.—A few of us here in Pittsburg have been practicing long range shooting through the past few months, but don't get out often enough to attain any great proficiency in the science. Some seven were on the range yesterday, but owing to the weather conditions, the scores

were very poor.

The ground was well soaked by a 24 hours' rain, ending only the The ground was well soaked by a 21 hours 'rain, ending only the evening before, and the bright sun of Friday, which shone warmly between the flying clouds, caused the moisture to rise, forming a very heavy mirage. To belp this, we had a strong head fish-tail wind, ranging from 10 to 2 o'clock, requiring changes between consecutive shots of 5 and 6 points on the gauges at times. Under the circumstances it is not strange that no one managed to stay on the target all through, and only 4 finished the 15 shots at each of the 3 long ranges. The scores stood:— (80) vards...35545556455554-70)

R. W. Balley 900 yards 5 5 5 0 5 4 2 5 2 3 2 5 0 3 4 - 50 175 (1.000 yards 2 3 3 4 5 5 4 4 2 5 5 4 5 4 0 - 55)

Correction.—A palpable error of addition placed the Seventeenth Battalion, of Nowburg, in the fifteenth instead of the eighth place among the teams of the State shoot in our report of the Creodmoor Fall Meeting last issue. The total should have been 412 instead of 312 as given NEW ORLEANS 18. DENVER .- A few days ago it was anno

NEW ORLEANS TE. DENVER.—A few days ago it was announced that a rile match, scores transmitted by telegraph, would be shot by teams of ten men in Denver and New Orleans, the conditions being 230 yards range, 15 shots each, military rifles, 6 pound pull. Since then the Captain of the Washington Artillery Rille team has received a letter from Major Wm. Arms giving a detailed secret of the Denver team's first practice.

The Major writes: "The Denver rifle feam were out to-day (Sept. 4tb) for practice at the Fark; only 8 showed up, the other 2 being in the mountains, but will be back for the big shoot. I witnessed their shooting. The scores were: J. G. Anderson 6.

witnessed their shooting. The scores were: J. G. Anderson 64, W. H. Anderson 63, J. P. Lower 62, G. W. Lower 60, J. M. Andrews 60, V. Kennecott-35, Geo. Garner 57, Wm. Fowler 47, Capt. Dudley Selph, of the W. A. R. team, will soon call the noted rillemen of New Orleans together to discuss the manner of

selecting a team. The Croscent City marksmen will have to practice steadily if they expect to come out successfully in the contets with the trained riflemen of Denver.

WILKINS TS. ALEXANDER.-Columbus, Ohio, Sept. 17th.-An exwilkins is. Alexander—commons, Omo. Soft. Infin—An ex-citing rifle match was shot here to-day between Dr. J. M. Alex-ander, of Indianapolis, and Otto C. Wilkins, of Cooperstown, Pa. After considerable difficulty the men were brought together to try their skill, endurance and good fortune for a purso of \$60 in each of two matches. The first a match to decide who could break 160 balls in the least time after first shot fired, and the other In match was recorded in Dulle. William was a transparent with last each of two matches. The first a match to decide who could break 100 balls in the least time after first shot fired, and the other to make best score on 100 balls. Wilkins was a stranger, with but few newly-made friends, while the other man was at home with all the sporting men of the place. Mr. Wilkins had been recently sick with fever and the two men scened anything but matched. Alexander weights 20 pounds and is all bone and muscle. Wilkins was rather pale and delicate, weighting 150, but with the first of determination in his fine steel-blue eyes. The rilles used were the Winchester by the Doctor and the Kennedy magazine rifle, manufactured by the Whitney Arms Company, New Haven, Com., by Mr. Wilkins. A large crowd was in attendance, and excitement ran high. Dr. Alexander won the toss and went to score, using three rifles. With all bis tremendous strength he became grougy before the finish, but brought down the fragments of his one bundredth ball in seven minutes and thirty-four seconds. His backers were jubilant and hissed the slighter man as he took his stand for what seemed sure defeat. But skill and agility served well instead of great strength and Mr. Wilkins hammered away so merrily that the, referce called "broken" for the one hundredth time in just six minutes and twenty-dive seconds after the first shot, which scooped the big Doctor with over a minute the first shot, which scooped the big Doctor with over a minute It was a sore defeat for the boys who put their money

on the heavier man.

In the second event Wilkins won the tose, and taking the stand, broke 23 and lost 1—ran a half dozen and then lost another

then getting down to work broke 65 without a miss, losing the ninety-seventh, but breaking 97 out of 100. The terrible strain of the preceding match had left him in bad shape, or even a better score would have been shown. The Doctor followed, but before score would have been shown. The Doctor followed, but before reaching his twenty-third ball had lost 4 and abandoned the game and second purse to the young fellow, who now had no lack of friends. Taken altogether it was the most exciting and enjoyable sport witnessed, here for a long time. The score stood:

— Time Match—Fifty-seven yards rise, tossed by hand straight

#### THE WAVERLY TOURNAMENT.

THE archery tournament held at Waverly, Sept. 22d, was THE archery tournament held at Waverly, Sept. 22d, was a complete success, everything passing off smoothly and pleasantly. Double ends were shoot, twenty-four targets being used and nearly fifty archers shooting. Major A. G. Constable, President Grand National Archery Association, officiated as field captain, and from his management there, archers may look forward to the next Grand National as the most complete in arrangement of any yetheld. No large scores were made, save by one of the ladies, whose Columbia Round is one very rarely, if ever, equalled by an American archer in a public shoot. She is a member of the Grand National, and her chances for the medal next year are certainly good: next year are certainly good ;-

Umpires-United States, Giles; All Canada, Eyres. Umpires—United States, Giles; All Canada, Eyres.

St. George vs. States Island.—At last the first elevens of these New York organizations faced each other on the St. George's grounds at Hoboken, N. J., on Sept. Islth. It was the first meeting of the season, the Island club, it being said, having caused several postponements. Both clubs turned out strong; Cross, again, for the home club, doming the gloves, and Soutter, after an absence of 18 months, taking charge of the bowling. Want of practice, as far as pitch and straightness being concerned, seeming, however, to be of no necessity. In the first innings we never saw him bowl more effectively. Staten Island trotted out W. S. Patterson, the captain of the Cambridge University eleven of 1877 and '78, and Kessler, the here of Philadelphia. Glies' wicket, for once, was not up to the mark, and Line's bowling did not it. It has been our misfortune in the course of leng each perience to witness wretched fielding on meny occasions, but we can never recall to mind a more depionable exhibition than that made by the Island so-called first eleven. Bind fielding either creates mirth or devires of spirits in the ring, and on this co-

changed to expressions of disgust. There is really nothing absochanged to expressions of disguist. There is really nothing absolutely funny in seeing very bad cricket. It palls on one in time. As a chronicler of the noble game, we have long known one fact, that as long as a reporter deals out his taffy liberally he is a "bigly good fellow," but when he begins to crowd the mourners, his lot is not a happy one. In despite, however, the impending fate of being obliged to watch the remaining games of the season from a being oblined to watch the remaining games of the season from a neighboring housetop, or for the future hold only a speaking acqualitanee with the gentlemen who miss the most cardies, we propose, like truthful James, to "rise to explain." There never was, in New York, since the days when cricket was first introduced, over a bundred years are, a club founded under more happy assiptee than the Staten Island. Its ground, the most picturesque in the country, soon attracted the players of the Metropolis, and its members list increased in goodly numbers until it far exceeded the total membership of all the other organizations combined. For once we trusted that cricket was firmly established, and that the club's management would be such that New York would push to the front and be able to hold its own in time. In the entry days the Island organization played a plucky up hill number of seasons with varied success. Beaten badly at first, it in time began to hold its own, and then to win. This sucup hill number of seasons with varied success. Beaten badly at first, it in time began to hold its own, and then to win. This success has proved almost fatal to the club's once good name. Not content with playing one gume fairly well, other games weap introduced upon the ground, and now it is not a success at any. Cricket, begond all other outdoor sports, requires the most practice, and it is one man's work to play the game intelligently and work to good the content of the game.

Cricket, beyond all other outdoor sports, requires the most practice, and it is one man's work to play the game intelligently and well. Now for the game.

Staten leland won the choice and took the innings. The total result was one short of three fluures. Kessier letted freely for 29, made up of four 3%, six 2% and singles. Donaid played well for 16. a square leg bit for lover the fence included, and Patterson prettily for 11; he has the Cambridge poke down tine, but it don't work on the off stump. Soutter, with the ball, covered himself with glory, and the fielding was pood. St. Georges made 135, Glies played a very fine defensive innings of 50, the top score of the match. It was obtained by good alt-round cricket, and noticeably some excellent clean euting, One 5, four 3%, and nine 2% and singles made up the score. Soutter's 50 was fluky at the start, and there were several leis-off: but toward the end he warmed up, and rattled up his score with time hard hitting and good forward play. Morean and H. Moore H cach, the former over the fence at square-leg for 6. We have already remarked on the fielding. Kessjer at the wicket was out of place, and the Cambridge expert no better than the rest. This innuing decided the match, the home club winning by 56 runs. Staten Island had a second try, and secured 103 for the loss of three wickets, Lane's 56, not out, being very well obtained without a chance one over the fence to leg, and Kessler's 33, and J. R. Moore's 16 showing form. The bowling was decidedly bad and the telding careless, as it always becomes when the result has been achieved. Score: as it always becomes when the result has been achieved. #### ASSOCIATION MATCH.

#### ENGLISH US. AMERICANS.

HEADQUARTERS CRICKETERS' ASSOCIATION OF U.S.1

sas walnut street.

PHILADELPHIA, Sopt. 22d, 1880.

The Executive Committee have decided to make the Association match, to be played at Philadelphia, Oct. 6th and 7th, a match between English and American players, whether amateur or professional, resident in the United States.

Secretaries of c ubsin the Association

fessional, resident in the United States.
Secretaries of cubs in the Association will please forward,
without fail, before Sept. 29th, the names of their players who desire to take part in this match.
The actual traveling expenses of players coming to Philadelphia will be defrayed out of the proceeds of the match.

The D. Gowen Secretaries of the Company Secretaries

JOHN P. GREEN, Secretary.

ENGLISH US. AMERICAN.

The above notice will recall the stirring matches of bygone days, when our English and American players contended for the championship. The Americans have improved so much in the last fitteen years that it was difficult for a time to get together an Ags. Intern years unart was unantern of a time to get objected as English team that could fairly be considered their match; but with the accession of such excellent professional players as Bromliead, of the Germantowa; Lane, of Staten Island; Norley, of the Manhattan; Giles, of the St. George's: Oldham, of Balti-more; Brewster, of Newark; Smith, of Detroit; Braithwatte, of

the Merion; Smithson, of the Belmont; Brooks, of the Girard, Tyers, of the Chesnut Hill, and the strong English amateur play-ers in these organizations, including Patterson, Kessler and Harvey, of the Staten Island; Cross and Moeran, of St. George's Grega, of Manhattan; Pearson, Webster and the brothers Har-grave, of the Girard, and three or four flue players in the Penin-sular Club—our American players will have their hands full.

MERION 78, YOUNG AMERICA.—Played at Ardmore, and resulted in the defeat of the Young Americas by 91 runs. A wonderfully well-played match, with superb fielding on both sides. Lowry's bowling beat the crack bats of the visiting teams Dr. Caspar Morris, b D. S. G. M. Newhall, c and b Low-

ENGLAND 08. AUSTRADIA.—Played on the Oval, London, Sept. 6th, 7th and 8th, and resulted in a victory for England by 5 wickets. In our next issue we will give the detailed account of this match taken from the London Field. It was beyond question the most wonderfully interesting match ever played, and was witperson by the largest crowd ever present on a cricket field. ENGLAND.

#### THE ANTHRACITE AGAIN.

THE ANTHRACITE AGAIN.

Believing that you desire nothing more than the dissemination of truth, let me protest in the name of common sense grainst of truth, let me protest in the mane of common sense grainst of truth, let me protest in the name of common sense grainst of the process of the p

Our correspondent is assured that this journal will continue to oxpose the Perkins boiler and engino as a piece of endneering quackery. We pronounce the assertion that the Anthracite consumes only one pound of coal per horse power per hour an untilitated falsehood, and like our correspondent hold Major Geo. Deane, the Secretary of the Perkins Engine Co., now stopping in Deane, the Secretary of the Perkins Engine Ca., now stopping in New York in the bopes of selling rights to American builders, at least as indirectly responsible for the currency the falsehood has gained. The facts concerning the Perkins boiler and engine are these: The system has been in the market for many years, has failed to receive popular approva; in Eogland, was thrown out of all vessels that have tried it, except the Anthracite, borrowed for advertising purposes from her real owner; the boiler is not, in marine practice, any more economical than the common high pressure cylindrical boilers in use at present. So little faith have the Perkins people in their own work that through ten long years they have refused to have a thorough trial made of the system. Let Maj. Deane undertake to answer these plain statements If he can, or, since he is not conversant with engineering matters, let him produce any official reports proving the contrary, and no cun, or, since he is not conversant with engineering matters, let him produce any oillicid reports proving the contrary, and no journal will be more ready to do him and his cause justice than FOREST AND STREAM. Until then we refuse to fall into line with the common herd, and cannot chant praises to something which does not possess the virtues claimed, and we deem it our particular duty to warn yachtsmen, of whose interests we have especial sharge, against accepting an imposition because it appears plausible, though it has no better foundation than the sensational clap-trap of the penny-a-liner of the daily press. For the benefit of Mail Deem we may add that a certain purition of his inversal. of Maj. Deane we may add that a cortain portion of his journalistic enhourage does him very little credit, either as an expert or as a man, and that in the interests of his company a closer scrutiny of his overzealous supporters will serve to keep the company clear of the charge of bad associations.

#### SUNBEAM-GEM.

SUNBEAM—GEM.

Folitor Forest and Stream:—

The long talked of match between the deep water boats Gem and Sunbeam took place off the Graves Friday, the 17th 19st. Hy mutual agreement a match was arranged to take place as above for \$50 a side. The courses to be either from the Fog florn off the Cross of the Graves Friday, the 17th 19st. Hy mutual agreement a match was arranged to take place as above for \$50 a side. The course to be either from the Fog florn off the Ledge Buoy and return, the distance being for No. 1 course is nautical miles, and for No. No. 2, about 18 imiles. Friday morning broke clear and pleasant with every sign of a fair soling to be 10 course. The property of the course would be rest soling to by 10 A. A. very light air was blowing from the west southwest. Measurement was on the water-line only. ### CEDAR CANOES.

CEIJAK CANOLO.

CEIJAK CANOLO.

CEIJAK CANOLO.

Edilin Forcet and Stront.

Your correspondent, "Chard," in the Issue of Sept. 9th, by no means does justice to a cedar canou in his comparison. First, as July 1997.

Here of the Comparison of the Comparison of the Comparison of Fine Comparison. First, as July 1997.

Here of the Comparison of the Comparison of the Code, with bulk-heads dend thing a Rob Roy by Searle, brought to this country in 1800, or 1917, and in use almost constantly since in all sorts of vaters, and in cars and steamers, is still in good order. As to leakage, it is very slight with a well-built boat, as a little water of vaters, and in cars and steamers, is still in good order. As to leakage, it is very slight with a well-built boat, as a little water completely. The difference in price is also not so great, as few who can afford a really good boat would hesitate between \$5 to \$50 for a canvas boat, and \$50 for a similar one of cedar. It is not can be no bollow lines; beside which, the wooden boat always must be much the handsomer in finish.

The canvas canou has two uncrite; it is easily and cheaply unit by those having no knowledge of hoat almide, and the complete of the property of the standard of the property of the complete of the property of the property of the complete of the property of the complete of the complete of the property of the complete of the property in the strong of the property of the complete of the property in the own who has used the two will consider it superfor in weight, strencht, speed or appearance.

#### YACHTING NEWS.

Bogron YAGHT Com.—The fourteenesth annual regitta of the club was sailed out City Point Sont. Ithis, in a light westerly wind. Only few crift came to the line, as the rices of the Dorchester Y. C., sailed the same day, interferred with the entries seriously. The custom of fixing upon the same day by two leading clubs in the same waters might easily bave been prevented by a little foremotion of the control of

## TROUTING EXCURSION TO NICHOLAS COUNTY, WEST VIRGINIA.

TROUTING EXCURSION TO NICHOLAS COUNTY, WEST VIRGINIA.

L AST winter, having concluded to try the trout fishing of the mountains of West Virginia, I had ample time to lay in a sufficient supply of fishing tackle, and, as is usually the case with amateurs, a large part of it useless and cumbersome. Juno being considered the best month for trout fishing at that point, I left Cincinnati May 24th, arriving at Kanawha Falls (of C. & O. R. R.) May 30th; spent a couple of days here bass sly-fishing below the falls, catching about a dozen fish, the average weight being about one pound. I have seen items in your paper several times that stated that trout could be caught at Kanawha Falls, but from all the information I could gather from the natives and personal attempts, I came to the conclusion that no trout could be caught within a radius of fifteen miles of that place. The bass angler will be badly disappointed but it would be impossible to describe the birry disappointment of a trout angler when he finds that no trout have been caught there for a mumber of years. The best fishing I had there was in July, 1870, catching thirteen bass, weight twelve pounds, with the fly. This is the largest number caught while I was there either in that year or in June, 1880. I would not recommend the place to anybody going there with the sole intention of lishing, but as a pleasant and cheap summer resort, making fishing a secondary consideration, I think it has few equals. Finding it impossible to employ a man to take me to Cherry Tree Bottom (sixty miles distant), I concluded to hire a horse and make the journey without any companion, and after reducing my bugage to a pair of rubber boots, one trout basket filled with tackle, one pair saddle-pockets, containing a change of clothing and two fishing rods, I was properly equipped for the journeys. A two days' ride on horseback through the mountains by myself was trefer lonely and tresone, and about the only thing that kept me awake during the middle of the day was the fear of being thro

or five feet deep, would gladden the heart of any angler, and he would be gleating over his prospective pound trout before he would wet a line. But after a number of easts, and raising no larger trout than six inches, he will be overjoyed at the landing of an eleven-inch fish, weight about seven ounces. The larger part of the fish of the north and south forks were caught last fall in a trap set below the junction of the two forks, which form the main stream. There were small hopes of any success after learning of this lawless practice, as it is a well established fact that rout always return to the same stream in which they were breed. I experienced the best success in the south fork, catching twenty-five trout, weight five pounds, the largest being eleven inches in length, all taken with the fly exclusively. This was by no means up to my expectations, which would not have been satisfied with anything under a pound trout, but this is the disappointment all amateurs are subjected to. The fish in Laurel Run seemed to be very small, and few and far between. A rather peculiar discrimination in the movements of the flies by the trout attracted my attention. The fish in Laurel Run would never take the fly unless it was being drawn down stream, while those of the morth and south forks of Cherry would invariably take in the flies of the contraction of the morth and south forks of Cherry would invariably take it when drawn against the current. East year, in July, I found it impossible to induce a trout to take the fly by drawing it through the water. They would leap at it while still in the air, or just as it was about to touch the water, but as soon as it struck the surface of the water they would detect the deception, and all the most natural movements I would give the fly would not tempthem to take the few trout that were in it the following year to take the fly by drawing it down stream. The white to or five feet deep, would gladden the heart of any angler. them to take it. I suppose the very low and clear water at that time was the cause of this, as I had no trouble to induce the few trout that were in it the following year to take the fly by drawing it down stream. The white miller, pheasant, dotted dun, ciunamon and yellow hackle mere found to be the most taking flies. I encountered my first rattlesmake at Cherry Tree Bottom. Returning to C. T. B. from Laurel Run by a narrow road cut in the side of the mountain, about 4 P.M., I was suddenly awakened from my pleasant thoughts by a loud rattling, resembling the music of a locust—thought it was a locust, but my innate dread of snakes induced me to stand perfectly motionless the instant I heard it and try to place it, in which I did not succeed very well, as I had supposed it issued from a clump of bushes about five feet to the right of the road, but I was convinced that that supposition was wrong when I saw a yellow rattlesnake sunning itself on some rocks in the center of the road about fiftee feet from me. Necessity compelled me to attack it, for the reason that the road was too narrow to allow me to pass it safely, I commenced to throw rocks at it, and after throwing about twenty I managed to hit it, inducing it to crawl away. It had kept up a continual rattle from the moment it discovered me until I had struck it with the rock, when it became perfectly silent.

and after throwing about twenty I managed to hit it, inducing it to crawl away. It had kept up a continual rattle from the moment it discovered me until I had struck it with the rock, when it became perfectly silent. Advancing a few feet, and at the same time carefully examining the side of the road in which it had disappeared, I was now thoroughly frightened at sceing the reptile in a coil, with its head in the centre, ready to strike the moment I came within reach of its poisonous fangs. Hastily stepping back, I again commenced to attack it with rocks, and at last succeeded in driving it up the hill, where I obtained a good view of it, and judged it to be about four or four and a half feet in length and about one and three-quarters or two inches in diameter. This was the only rattlesmake I met with, but I frequently mistook the singing of a locust for the rattle of a snake, caused by the remembrance of my first encounter.

Being within about ten miles of Hew Mountains, I concluded to try the fishing of the Cherry River at that point, where treat had been caught hast year to the length of eighteen inches, and securing a guide and his son as companions we managed by riding, walking and crawling through the laurel bushes to reach the river. My guide selected a small hillock, with four small trees at right angles, and commenced to build a camp by trimming the trees, leaving a V notto no each at the junction of two branches, across which he had two poless. The next thing to do was to get a roof for our frame, and selecting some small and rather juicy trees about a foot in diameter, he notched with an axe a circle at the bottom and another about five feet above the lower one; then cutting a straight groove between the two circles, in which he inserted the axe and pryed off the bark. He lhen proceeded to lay the plates of bark across the poles, and weighted them with rocks to prevent the wind carrying them away. It was only at night that it occurred to my cowardice and strange surroundings, which is partly excusable

tracted from the bacon by frying, comprised our breakfast, and though it would cause me to sucer at it here in the city, I mover enjoyed a heartier breakfast, served in no finer manner than on bork plates, which I advise everybody to make use of bork plates, which I advise everybody to make use of shiring camping our.

Result of two days' fishing, eighty trout, ranging from four to eight inches, all taken with the fly. The average size of the fish not being satisfactory, and feeling the lack of civilized accommodation, I returned to C. I. B., afterspending two days and two nights in the flew Mountains.

Anybody desiring a good guide for hunting or fishing in these regions can do no better than to employ Mr. James Mullen, whose charges are extremely low, and who is perfectly at home in these mountains, as he spends a larger part of his time in them in search of game. The flew Mountains abound to a fair extent with bears, wild cats, deer and turkeys, while pheasants and squirrels are without limit, and an occasional punther is seen. My second fishing tour to C. T. B. was not commenced with as great expectations as my first, consequently I was not as great expectations as my first, consequently I was not as great expectations as my first, consequently I was not as great expectations as my first, consequently I was not as great expectations as my first, consequently I was not as great expectations as my first, consequently I was not as great expectations as my first, consequently I was not as great expectations as my first, consequently I was not as great expectations any my first, consequently I was not as great expectations any my first of consequently I was not as great expectations and my failure to catch anything farger than eleven inches, as I had been at the beginning of my first day's trout fishing. Fortunately, or unfortunately, or arise five feet in twelve hours; unfortunately on account of being detained for some time at Gauley River, which was swollen to such an interest and the man first and the man fi

extent as to make it impassable to the clumsy ferry boat, guided by oars, used to take horses and wagons across the river. The fishing of this trip was by no means up to my expectations, but taking into consideration the health gained and the small expenses incurred, I by no means regret it. The horsebackride can be shortened about twenty miles by starting from Rondwerte (on C. & O. R. R.), Cherry Tree Bottom being due north of it. It is better to hire a horse for the entire length of time that one intends to stay, the charge of pasturage being very small.

The total expense of a three and a half weeks' trip was as follows:—

as follows :

as follows:

Horse bire for twenty days

Round trip to K. F. from Uncinnati

Two and one-laft weeks' accommodation for myse f and

One week's expense at K. F.

Incidentals.

This is a very pleasant and cheap trip for anybody who is satisfied with a fair number of trout, and whose means are limited, and if more information is required by any sportsman wishing to vaist C. T. B. or Hew Mountains, I would refer him to A. Spencer and James Mullen, of Cherry Tree Bottom, Nicholas County, W. Va. They will be happy to give all the information possible, and be willing to accommodate a limited number of anglers or hunters. A map of the Stato of West Virginia, published by G. W. Colton & Co., New York city, is extremely useful to the angler, it being the most minutes map of that State published. I mention this only to accommodate the sportsman, as I found it impossible to procure one in Cincinnati, and was compelled to send to New York for it.

#### MENHADEN MOVEMENTS-A NEW THEORY,

HE following letter, written by Capt. Terry, proprietor of the South Bay Oil Works, situated just east of Fire Island Light, to Prof. Baird, has been given us for publication. Capt. Terry's long experience in the capture of menhaden entitle his views to careful consideration.

Prof. Spencer F. Baird, United States Fish Commis

Prof. Spencer F. Baird, United States Fish Commissioner:—
Dear Sir: I met, by invitation, with the United States Oil and Guano Association, at the United States Hotel, on the 14th of January, 1880, and had the pleasure of hearing the address of Prof. Goode, on the menhaden question, as to the time when they make their appearance on our coast, and where; how far they reach East and the cause of their not reaching as far as the coast of Maine last year; also their food and the various causes of the scarcity at certain seasons of the year at different places on the feeding grounds, etc., etc., all of which I listened to with great interest, and the greater part of which I could assent to

of the scarcity at certain seasons of the year at different places on the feeding grounds, etc., etc., all of which I istened to with great interest, and the greater part of which I could assent to.

As to the fish leaving the entire coast line, in that part of the season, from Cape May to the Vineyard Sound, where they should be the most plenty, he could not, or did not, give any particular reason. I have been in the fishing business for the last sixteen years, first as part owner of the Whig Inlet Oil Works, and lately of the South Bay Oil Works (formerly owned by Walf's Sons), situated at Fire Island, in the Great South Bay. For the first ten or twelve years the lish made their appearance with us about the loth day of April, entering our sounds and bays as scattering fish, and could only be taken by set nets, or hauling seines on shore, the water being too cold for them to shoal up or show on top of the water until about the loth of May; from that time purse nets commenced to take the lish out in the ocean. The fish would remain on our coast so as to be a profitable business until about the 20th of September, and then the summer lish would leave our coast for the season. On or about the 20th of October the fish would again make their appearance, and were what we would call the fall run, or main fish, which were very fat, and would continue with us until Doc. 1st, or until severe cold weather set in. In all this time the feeding ground for the menhaden was from Cape Henry to I know not how far eastward of the coast of Maine, taking in all the sounds and bays along our coast, with no molestation, except at the following places, viz: At first, only commencing at Cape May and in the Delaware Bay, afterward in the capes of Virginia, say about ten miles at cand near Cape May; then about twenty miles at and near Cape May; then about twenty miles at and near Cape May; then about twenty miles at and near Cape May; then about twenty miles at and near Cape May; then about twenty miles at and near Cape May; then about t Maine, and has resulted in an entire tailure of the menhaden lishery any further east than the Vineyard Sound in the season of 1879. And that is not all, for the fish has for the last few years left our coast, south side of Long Island, from four to six weeks in the summer season, at the very time when we used to have about our best fishing, and factories have had to be closed up more or less of the time from Barren Island to and including Gard-ners Pay.

Ing, and factories have had to be chosen up have or asso of the time from Barren Island to and including Gardner's Bay.

My reason for all this is, that so long as the fish had almost the entire coast line, and the greater part of the sound and bays, unmolested for their feeding ground the entire season from April to December, they would remain on the coast, and near the land, in shallow water. That is, they would strike the coast near Cape Henry, and follow it (somewhat like the mackerel) until they reached Eastport. And still further east and north, some remaining all along the coast, so there would be fishing the entire distance, excepting at short intervals, from the commencement of the season to its close. But for the last few years the entire coast line, from end to end, has been run over almost every day by the fishing vessels, and the fish have had no chance to remain in any one place for any length of time, but are continually harplace for any length of time, but are continually har-assed from morning to night every day, until they are forced to leave their old feeding ground, and an only to be found, as some supposed, some thirty to forty miles

off from the land and in deep water. I know that it is said that the temperature of the water, as far west as Boston Bay in 1873 and 1879, has been too cold for the menhaden to migrate further east; but I think there are other causes to account for it, such as stated above.

You will observe that until within the last few years, only saling vessels were employed in the menhaden fisheries; but fast sailing steamers have been put into the business, so small in numbers at first as not to be perceptible. But in 1878 the number was 64, and in 1879 there were 81; and with all the increase in number of steamers and tonnage we find the catch of fish to be 290,289,000 less in 1879 then on 1878, and the cry is that still the steamers come. To sum up the whole natter, in my opinion, the fish need, and must have, some portion of the feeding ground left to them unnolested by either sailing vessels or steamers engaged in the purse net fishing. Has not the fishing for menhaden all along our coast been so conducted, or carried on by those cugaged in the fisheries that although we have not killed the goose that lays the golden egg, we have in a great measure broken up the roosting place and nest, and compelled her to find a safer place to rebuild her nest for luture use?

W. J. TERRY.

SCHUETZEN NOTES.—The New York Schuetzen Corps is the ablest organization of the kind in America, and is comprised of our best citizens. Their membership is very large, and all work in harmony under the captainship of Major George Aery. The New York City Schuetzen Corps is an offspring of the above-named corps and is also composed of good men, but bears no comparlson with the original corps.

Packard, President, Sagadahoc Association for the protection of game and lish, at Bath

H. G. W., Virginia. I have a setter dog eighteen months old, and he had the distemper when six months old, from which he did not recover for severa months, during which time he was almost covered with yellow blisters, but never discharged from nose or eyes. Since he recovered he has always shown the same symptoms when given any exercise. Ans. Try Glover's imperial mange cure, advertised in another column, and write result.

mange cure, advertised in another column, and write result.

A. P. K., Boston, Mass.—I have a setter bitch now about ten or eleven months old which seems very healthy and strong, but ever since she was large enough to run with any strength she has had the babit of driveling at the mouth, although I cannot say that it does be any harm. Will any thing stop 11? She has not had the distemper. Ans. Keep the digestive organs healthy, give plenty of exercise, and in the course of time the liabit may correct itself. There is no specific reunely for drooling.

C. E. T., New York.—Clar you inforce the through your valuable paper how to dress a deer's hade to make it soft and plaining a Ans. Take soft water, about ten gallons, one-half bushel whent bran, seven pounds of sall, two and a half pounds of sulphuric oran, seven politics of suit, two dud a bait pounds of sulpharic acid. Dissolve allogather and put the skins in the solution and allow them to remain twelve hours; take them out and clean them well, and again immers twelve more hours, or longer, if necessary. The skins may then be taken out, well washed and dried. They can be beaten soft, if desired.

P. M. D., Metuchen, N. J .- My setter puppy, five months 'pro barks and howls on the chain and when locked up in the kennel.
What shall I do to remedy this? Ans. In the first place, no young
puppy should ever be punished by being chained. For many reasons all young dogs sould have their freedom. If you will switch the dog every time be commences to make a noise, and tell him

to be quiet you will find a few such lessons will be all that are

S., Reading, Pa.—I have a Ballard rifle, and in order to give it a liner appearance I thought of having the whole breech-block nickel plated. By so doing do you think it would make a strong reflection, or dazale the eyesight so as to interfere with the shooting? I see many revolvers done up in this way, and they make a very fine appearance. Ans. The rifle would look gaudy enough with the side-plates and trigger-guard plated. Beyond that any plating would be a positive injury.

S. L. A., Boston, Mass.-My Gordon setter bitch has been para-Tyzed—the cause, distemper. She is now just getting the use of her hind legs. Would you give her a tonic, or is good food all she needs? She has recently passed some worms. Will it do to physic her now, or had I better wait? She has a good appetite, and i am feeding her on milk, bread, corn meal and meat, cooked Ans. Give your bitch two grains of quinine and one orgenier. Ans. over your rotes two grains of qualine and one-cipitalit grain of nux vomitae three times a day. We would also suggest administering two doses of calomel, five grains each, eight or ten hours apart, followed by a tablespoonful of castor oil. Avoid feeding the nilk.

R. E. E., Buffalo.-My cocker spaniel had a slight touch of the distemper about six months ago, and I gave him the preparation as you directed, and he seemed to be perfectly well, but since then I have noticed that he is partially blind, and when I throw anything for him he loses sight of it and will sometimes go within any using for finite obsessed of it that win stonetimes go within three feet of it without seed it, but if he gets the scent of where I is truck he will find itright of. I think that it is the effect of the distemper. If I am right will you please duvise me what to do? Ans. The blindness, of course, is the result of distemper. Time and constant attention to the dog's general health may bring him about all right. Give two grains of quinine three times

a day. C. F. S., Rome, N. Y.—Where can I get reliable information concerning mackerel fishing, say for a summer's cruise? Ans. Converging makered naming, say for a summer's cruse? An interior of question hardly gives us an idea of your wants, but mackerd lishing is more or less good at times in Long Island Sound and up to Maline. The spring and summer times are often numerous, but are seldom fat. The hest lish are caught in October 11st simpossible to the discount of the machine of the control of the co ing a migratory fish which comes in immense numbers at progular times and at others is scarcely seen. By inquiring at the different ports on the sound, of the fishermen as you go, you can learn of their probable whereabouts, numbers, etc.

learn of their probable whereabouts, numbers, etc.

D. A. W., Fort Wayne, Ind.—During a recent trip through
Colorado and adjacent territories I heard, from the sportsmen
and travelers, considerable regarding the mountain lion, its great
size and ferocity, etc. I am unable to decide to my own satisfaction where the varmint belongs. Is it not like the vegetables of
California, an overgrown species of the American Jaguar or panther, the "Fills onca of Linneus?" Ans. The size and ferocity
of the mountain lion is often exaggerated, but at the same time
it is not a pleasant animal to have to do with at close quarters.
In different sections it is called variously panther, puma, cougar,
mountain lion, and by naturalists Fills concolor. A large cougar mountain lion, and by naturalists Felis concolor. A large of stands as high as a large dog and weighs about 150 pounds.

L., Rhinebeck, N. Y.—Will you kindly decide this wager and oblige an old reader of your valuable journal. A, B and C go ruffed grouse shooting, one afternoon. A wagers C that he will kill a brace of birds. A and B make a party shot and kill a grouse. A shoot together again and kill a second grouse. A shoots adone at another grouse and kills it. Does A win his bet to kill two birds. Ans. If A can prove that in the party shots his shot billed the birkers all 8% did not be one points the grouse and the short of the short o killed the birds and B's did not, he can claim the wager. But if we were C, we should make him prove this before paying. Perhaps the only way to satisfy both parties would be to dismiss the case and adjudge that B pay all costs.

H. P., Providence.-Will you kindly inform me in which of the two routes I would find the best fishing and shooting; first, Connecticut lakes, reached by way of Megalloway River, Parmachenee Lake, etc., or, second, leaving Mattuwankeux, on the east branch of the Penobscot, Milinoket Lake, Mansungun Stream to Branch of the Penobsoot, Milinoket Lake, Mansungun Stream to | when that has become dry remove it with an iron wire scratch Mansungun lakes, Churchill Lake, Eagle, Chamberlain, Mud | brush; this is to remove all dirt and grease from the barrels

Pond, to Chesuncook Lake, west branch of Penobscot, Parmerous, to Chesuncook Lake, west branch of Penobsect, Parmeduncook Lake and Penobsect River to Mattawamkoag? To whom shall I write for extended information of the two routes as to guides, boats, etc.? Ans. We would prefer the latter. See "The Eagle and other lakes of Maine," Forestiand Stream Aug. 28th, 1880, page 65.

CHIBUARUA.-My setter bitch, eight, months old, had the distemper about one month since, but is over it now with the exception of a weakness; in the hind parts, i.e., a kind of staggering when she gets up or stops. When running you cannot notice it, but the moment she attempts to walk slow she will stagger or it, but the moment she attempts to walk slow she will stagger or lean up against whatever is nearest to her; in every other respect she is in splendld health and seems to be as lively as if she had never had any trouble. She had three fits ten days or two weeks since, but an ounce of easter oil relieved her at once. Has not been troubled since with fits; nose cold and damp; eyes clear; feed with boiled meat, vegetables and table scraps; boiled liver two times a week. What will cure the above disease? Ams. This is one of the evils oftentimes resulting from serious attacks of distrumer. Give no evelth went nu very only any two resides. of distemper. Give one eighth grain nux-vomics and two grains of quining three times a day.

G. P. M., Oswego, N. Y.-I have a fine blooded pointer dog, two years old last February. He is a perfect beauty, good hunter, very intelligent and all right with one exception. When he was about nine months old I took him out for partridge, and not beling able to start any, on my way back I shot a crow. My puppy went out and brought the crow to me with all the pompand pride of an old rettlever. I was out of patience with my dog because it was not a game bird, and I punished him severely. The consequence is he has not brought me a bird since, and I fear he never will. What can I do? Ans. As you do not state whether you have tried him on crow agam, it is impossible to answer your query as fully as it deserves. In all probability your dog has been ruined for life as a good retriever by your own indiscretion. We have known a number of dogs ruined in this way. If you are kind and irm, however, and will use patience, he may be redeemed by the careful use of a collar and check-cord, rememberling to give your daily lessous before feeding and rewarding with gifts of food each step toward the desired result. ing able to start any, on my way back I shot a crow. My puppy

gifts of food each step toward the desired result.

B., Newburg, N. Y.—Can Scotch staghounds be used to advantage in hunting deer in this country? If so, are they as good as our ordinary deerhounds? Is there a breeder in this country from whom I could get one? Ans. The Scotch staghound, as ordinarily trained, follows the deer by view alone, and would therefore be of no use in hunting in this country except on the plains, where the quarry can be kept in sight. They would, moreover, be too fast for ordinary deer-driving, in which it is essential that the hounds shall keep close to the deer, or that the latter shall be very much frightened. Stonhenge, it is true, considers that the staghound or rough greyhound, for we presume that it is of this animal that our correspondent writes, possesses nose enough to follow even a cold track. These dogs have been extensively used in both deer and antelope hunting in the West, but have not proved so useful in this sport as have the smooth greyhounds, which have more speed, though perhaps not so much strength. The old English staghound was essentially a larger foxhound, in respect to his head, and had the body like a bloodhound, but somewhat lighter. The English staghounds are frequently advertised in our columns, and our correspondent can no doubt obtain one either by advertising or watching our advertisers' cards. can no doubt obtain one either by advertising or watching our advertisers' cards.

C. W. T., Oakland, Md.-Will you please be kind end C. W. T., Oakland, Md.—will you piesse be and enough to inform me of the receipt for blueling or blacking rille barrels; also method of application. Ans. Tineture of muriate of fron, one ounce; nitric ether, one ounce; sulphate of copper, four scruples; ram water, one pint. First plur up both ends of the barrel, leaving one plug in each of sufficient length to be used as handles; then thoroughly clean with soap and water.

Storwhild overwhich thick coart of line, slacked in water, and after which cover with thick coat of lime, slacked in water, and

Then apply a coat of the fluid with a rag, and let it stand twentyfrom apply a cond or the mind with a rag, and let it stand twenty-four hours, when a slight rust will have appeared; then take the burrels and immerse them in a trough containing boiling water, after which scratch them well with the scratch brush. Repeat this until the color suits, which will be after three or four applications. When completed, let the barrels remain in lime water u short time to neutralize any acid which may have ponetrated. Take great care not to handle the barrels during the operation for the least particle of grease will make bad spots

CLIFE.—I have a setter pup, four months old, that is troubled with worms and very much weakened from contined dysentery. Does not digest his food and his discharges are of a mucous, bloody and watery character. I have given bin a tablespoonful of castor oil with ten drops of turpentine to relieve internal pain of castor oil with ten drops of turpentine to relieve internal pain that caused him to how incessantly and drag about on the ground. The dose relieved him hefore morning. That wassome two weeks since. Have given him, within the last live days; two small doses of vermifuge, but as he is very much weakened by diarrhea am afraid to give him any more. To-day I gave him two grains or calomel, and intend after this, if necessary, to give him bismuth and chalk. Can you recommend any treatment better than this, or give me some idea of his disease and how to cure him I I am a practical hunter, have raised and broken many dogs, but have never had such trouble to raise 9 puppy before. Ans. Should the diarrhea continue give injections of one-half teaspoonful faudamin in tablespoonful of starch water. We would advise you to discontinue all purgative medicines and for the present to leave the vermifuges alone. Give two grains of quinine three times a the vermifuges alone. Give two grains of quining three times a day, and continue for several weeks, then write result.

# Special Announcement.

THE MANUFACTURERS OF THE "FOX" GUN, FEELING THAT DEALERS, as a general thing, have not done justice to the merits of this WONDERFUL GUN, are determined to have them placed before sportsmen more generally, that their great merits may become better known and appreciated. It is needless to speak of THE ELEGANT WORKMANSHIP AND WONDERFUL SHOOTING POWERS of these guns. It is a fact well established that they are UNSURPASSED BY ANY IN THE WORLD.

We propose for a limited period to offer a line of these guns at the following EXTREMELY LOW PRICES, after which the original prices will be restored, our object being to introduce the guns into sections of the country where dealers have failed present them; in the firm belief that where they become known they will be the established favorite, and we shall reapthe benefit in future of this great sacrifice.

Such Inducements Have Never Before Been Offered.

### GUNPOWDER. DUPONTS

Rifle, Sporting and Blasting Powder. The most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1803, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder: DUPONT'S DIAMOND GRAIN,

Nos. 1 (coarse) to 4, (fine), unequalled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING.

Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck and other shooting.

mail, rigeon, Duck and other shooting.
A quick, strony, and clean Powder, of very fine grain, for Pistol Shooting.
DUPONT'S RIFLE FG,
FG and FFG. The FG for Long Range Kiffe Shooting, the FFG and FFFG for general use,
Snorthur, Mining Shooting.

turning strong and moist.

Graph Charles and Mammoth Powder, U.S. Government standard,
Mammoth Powder, U.S. Government standard,
Powder manufactured to order of any required
grain or proof. Agencies in all cities and principal towns throughout the United States. Rep-

F. L. KNEELAND, 70 Wall Street, N. Y. N. B. Use none but DUPONT'S FG or FFG Powder for Long Range Shooting.

### THE HAZARD POWDER COMPANY

MANUFACTURERS OF

### GUNPOWDER.

Hazard's "Electric Powder." Nos. 1 (fine) to 6 (cearse). Unsurpassed in peof strength and cleanliness. Packed in squantisters of one pound only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 11b. canisters and & 1b. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. I fine to 5 (cearse). In I and 5 lb, canisters and 6 and 12 lb, keys. Burns slowly and verices, should not verices, should remarkably close and with great penetration. For field, forest, or vater should, y viceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle,"

FFFG FFG, and "Sea Shooting "FG in kegs of \$5, 194, and 64 lbs, and cansof's lbs. FFFG fs also packed in land 4 lb. canisters. Burnsstrong and motes. The FFFG and FFG are favorite brands for ordinary sporting, and he' Sea Shooting" FG is the standard Rife Powder of the country.

Superior Mining And Blasting Powder. GOVERNAMENT CANNON and MUSKETT POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of deaters, or of the Company's Agents, in every protainent city, or whole-sale at our office.

NEW YORK, THURSDAY, OCTOBER 7, 1880.

APPRECIATED. - We publish elsewhere, as an indication of the popular sentiment on the subject, some of the letters which are coming to us indorsing our course in respect to the "Dittmar Sporting Powder." Indeed no other course was open to us. Having fully satisfied ourselves of the peculiarly dangerous nature of this compound, we could have done nothing else than just what we did, namely, publish the facts fully and fearlessly. To perform what we believed to be our was in itself sufficient satisfaction. The assurances that our action is appreciated gives us added gratification.

FISH OUT OF WATER.-It is well known that some fishes can exist out of water for a long time, and many instances are upon record of carp, catfish, fresh water gars and others which have some way of keeping the gills moist, and so are enabled to breathe our atmosphere; but we now have to record an instance of a fish being shipped by rail a long dis-During the past tance, and arriving there alive and safe. summer Col. McDonald, of the U. S. Fish Commission, while pursuing his investigations for the census of the fishery interest, happened, while in Alabama, to obtain two large buffalo, Bubaliethys urus, from the Alabama River, which he wished to send to the Smithsonian Institution, and thinking that it might arrive in better condition if left alive as long as possible, he packed in the Southern or "Spanish" moss, and delivered it to the express office at Montgomery, where it lay twelve hours before starting. Exactly how much time elapsed between the taking of the fish from the water and the opening of the box in Washington we do not know, but certain it is that when it was opened both fish were alive.

#### REPORT OF THE NEW YORK FISH COMMISSION.

THE eleventh annual report of the Commissioners of Fisheries of the State of New York for the two years ending December 31, 1879, has just been laid before us, no report having been made last year. From it we learn that there has been a steady advance and improvement in all departments, and a gradual but apparent replenishment of the rivers and lakes. Complaint is made that the efforts of the Commission are to a certain extent counteracted by the reckless disregard with which protective laws are treated by a certain portion of the community that would enjoy or destroy in the present to the neglect of the future, and we are glad to see that the Commissioners are becoming interested in the subject of laws as we believe that the whole question of fish laws in every State should be considered by its Fish Commission, and no law passed without their sanction and approval, while they should at the same time be empowered to enforce them. The policy of the New York Commission has been to educate the people up to the point of taking care of the fish which they supply them with, and a beautiful policy it would be if it were not for the fact that there are in every community persons who have no thought or care for the general welfare, and who would take the last trout or shad in the stream for their own table or for market, if it were possible to get it, and that they recognize this is shown when they say, Volunteer effort will never be sufficiently repressive, and among the associations for the protection of game only one or two have been of much use

At the last session of the Legislature, the number of Commissioners was increased from three to four, and it was understood that this was with a special view to the cultivation of Long Island streams and the propagation of salt water fishes, which are of great value, perhaps more than the entire fisheries of the rest of the State, and which have, like the sea fisheries of all countries, been neglected until the recent experiments of the U.S. Fish Commission in hatching cod attracted attention to it, when it at once struck everybody that there was no good reason why fish should not be increased in salt water as well as in fresh, the only thing to be considered being the enlarged field, which would, of course, require operations to be upon a scale in accordance with it, a matter rendered easy by the new methods now in use in fish culture, which have been adopted everywhere for extensive work.

Two species of trout from California have been obtained which they (the Commissioners) call "mountain trout" and "McCloud River trout," whatever they may be, as the scientific name is not given. And here we would say that the New York Commission is not happy in its choice of common names for many fishes, having a nomenclature of its own not recognized elsewhere-as "Oswego bass," "strawberry bass, 'bull heads," etc. But, to return to the trout. It is said that these Californian fish are superior in rate of growth and hardiness to the native, though not so beautiful. We confess to being a little puzzled at this, as we thought that one of the varieties was Salmo irridea, the beautiful "rainbow trout," but not having seen the fish in their ponds, this may be our mistake.

Of "salmon trout," S. namaycush, many specimens have been reared in confinement at Caledonia, and are found to be very sensitive to temperature, some of them being six or seven years old, and weighing twelve pounds, being perfeetly domesticated, as shown by their breeding in confinement

The shad season was favorable, and a good showing is made of fry hatched between May 14 and June 20, when a freshet put a stop to operations after 6,686,000 had been turned loose, the largest season's work for the past five years. by the fishermen is also reported in a quotation from the Rochester Express as being exceptionally large, "so much so that the lands along the river have been freely manured with shad, and tons of fish have been thrown over at Albany by the fishmongers, who would not ship at the reduced price demanded by outside market men."

Carp have received some attention, 500 young having been received from Prof. Baird in November, 1879, which were distributed to eighteen persons, none receiving over twentyfive specimens, and their growth and acclimatization is a subject for future reports. Letters reporting the success of plantings in different parts of the State are published, and an appendix gives the list of eggs, fry and adult fish distributed, making a very good showing of work done.

#### LAUNCH OF THE RAFT.

WE had been fishing from an old raft, which, if it had ever been a thing of beauty, was not "a joy forever," for it had annoyed us up to the jumping off point, where patience ceases to be a virtue and commenced to indicate a very decided tendency to laziness or stupidity, and the only re course remaining was the construction of a new raft one built after the most approved model and known as the "Prime Raft." The manner of its construction is best dedescribed by the graceful author of "I Go a Fishing."

Having cut your two side logs, hew near each end of these a notch as deep as you please, only let this notch grow wider as it deepens. Shis is easily done by cutting out with an axe. Then cut your cross timbers and hew their ends down, if necessary, so as to slip the ends into the notches in the side imbers. Having slipped the end through the notch, split it and drive in a wedge to make it hold tight ,n the notch. will thus have a stiff, stout frame and can pile on your crosslogs and balsam boughs with perfect assurance that the raft will not go to pieces.

When it was announced that the raft was completed and ready to be launched business was universally suspended and the anglers at the adjacent camps made a holiday of the occa-The camp fires smoked with a denser smoke, dish cloths fluttered from every cook-house, and tin pans, pails and kettles shone like silver beer-mugs. Ample provision had been made for the comfort and convenience of the sightseers, every one of whom had the option of standing in front by the music or of shinning up as many trees as they chose and gazing down upon the skilled workmen as they busied themselves about their different specialties connected with the enterprise.

After much anxious waiting everything was ready, and at the third or fourth "Ye ho! all together, boys," she glided like several serpents into the water, and as she straightened herself, business-like Jack did not break over her the traditionary bottle of champagne, but burst a vial of tar oil and christened her the Goslow.

The echoes returned a hundred fold the cheers that rolled down the mountain sides, the tinware clattered with joy, and every dish cloth and towel fluttered with delignt. The old back log at the camp took a tumble and sent up a cloud of sparks, while the birds piped their cheerful songs and filled the summer air with their long-drawn cadences.

The Goslow was launched and completed independent of Congressional appropriations, and the feverish expectancy of its projectors was quieted. The ship-builders of the Delaware and the Clyde were at last convinced that their yards could no longer monopolize the naval architecture of the world. On her trial trip she attained, under the unfavorable conditions of a head wind and a defective paddle in the hands of an inexperienced paddler, according to Whistler's new system of guessing, the very satisfactory record of one and a quarter kinks an hour. This record will be very materially improved upon when her floating gear has dovetailed closer, and when she has more perfectly shaped herself to the peculiar formation of the lake.

Her fittings were of the most gorgeous description compatible with utility. She was covered with huge sheets of spruce bark and carefully selected boughs. A chunk of red sandstone of the Devonian age, fastened to a three-quarterinch manila rope, made an anchor convenient in size and weight. There were two luxurious scats, one at each end of the raft, which was intended to go like a ferryboat, either

The saloon and staterooms are intended to be left in the woods, forming, in connection with the kitchen, what is known as the camp. When the Goslow is in commission these rooms may be reached on emergencies by jumping overboard and swimming ashore. The bathroom, anywhere in the lake, furnishes ample conveniences for those who believe cleanliness akin to godliness. Altogether it was admirably adapted to the purpose for which it was intended, and its appearance was in perfect harmony with its surroundings.

A raft after the Prime model possesses some advantages

over the ordinary bost. In the matter of speed it is deficient. but for real solid comfort after the fishing grounds are reached the properly constructed raft bears off the palm, and more than repays the extra time and power required to move her. The angler can walk about without being obliged to say Now, Jack, be careful and lean over a little while 1 get by you. All right now."

There is lots of elbow-room and no "hard-a-lee"ing.

#### DETONATION OF "DITTMAR SPORTING POWDER."

UNITED STATES CIRCUIT COURT.-New York, Feb. 19, 1880.-Bo fore John A. Shields, United States Commissioner Southern District of New York. Deposition of Carl Dittmar, of Binghamton, N.Y. who, being first duly sworn, deposes and states in answer to Cross Onestion 836 :

My gunpowder, when I first made it, had the same tendency as nitro-glycerine powder. It burst most all the guns at first, when a began to introduce it. It was just the same as it i would use NF TRO-GINCERINE POWDER. I have it now so that it is tamed down and don't burst any more guns.

THE affirmations quoted above were made under oath They were not originally intended for publication in the Forest and Stream, but we have already printed them twice, though without the permission of the author, and we venture to tax the reader's patience with another repetition of them. In this sworn statement the manufacturer of the ni tro-cellulose explosive compound, styled "Dittmar Sporting Powder," confirms our own views of that product. And the fact that we accepted the first three of these affirmations, and did not accept the last one, is a good and sufficient explana tion of our discarding the hitherto prescribed and approved shotgun tests in our experiments with the explosive. who may have followed us through our study of the powder to this point, will readily agree that such experiments could never have ended in anything more decisive than the unsatis factory, contradictory and valueless results of five years of shotgun tests. Those experiments have also been disastrous. Had this frank avowal of the true nature of the "Dittmar Sporting Powder" been made in 1875, the sportsmen of America would have been spared the loss of some thousands of dollars worth of guns, and one man at least would have been prevented from maiming himself for life.

There was never a product put upon the market more pro lific of debate than that explosive compound which is grained like black powder and has the color of nitro-glycerine. The discussion was not provoked by the legitimate difference of opinion attaching to an agent which produced certain uni form and easily determined effects. The baffling thing here was that no two disputants could agree as to what the action of the "Dittmar Sporting Powder" really was. The fact was, and is, that that compound being a nitro-cellulose product may explode by simple combustion or by detonation, and between these two extremes in a wide variety of modes and with a builling variety of effects.

To attempt to determine the explosive nature of the powder by experimenting with it in a shot-gun is the sheerest folly although, owing to the strenuous and successful misrepresentations of the powder, that folly has only now become mani fest. We have attained certain results in the course of our tests of this powder, which, when considered in the light of our theoretical study of the product, are more satisfactory and conclusive than fifty years of shot-gun trials. We sl last week how successfully the manufacturer had explained away the unfavorable results of shot-gun trials. We venture the remark that the Forest and Stream's tests cannot be so readily evaded.

#### ANVIL EXPERIMENTS.

Our first experiments were with an anvil. They were suggested by the following statements: "If my powder is put on an anvil and struck with a hammer it

does not explode."-Letter of Carl Dittmar in Forest and Stream, March 16, 1876. "It cannot be exploded by concussion."—Circular of Dittman

Powder Company (No. 2).

"It can never be exploded by any concussion or friction."—Cir

cular of Dittmar Powder Manufacturing Company (No. 2),

Now, evidently, the simplest way to test the truth of these statements was by trying whether or not we could explode the powder on an anvil with a hammer. We tried it.

1. A pinch of the powder "FFF," sent to us by Dr. S. P

- Nash, was placed on an anvil and struck with a light hammer It exploded.
- 2. Same experiment repeated with "B" brand, "C" brand and "FFF" brand, which had been received by us in sealed cans from the Dittmar Powder Manufacturing Company (No. 2). Result in each case the same as in experiment 1. These tests are so simple that any one can repeat them. face of a flat-iron may be substituted for the anvil.
- A pinch of "C" brand was placed on the anvil and a gun wad placed over it. Upon this was held a light hammer, which was then struck with a heavier hammer. This experi ment was repeated several times, and each time the powder exploded. In repeated trials with black powder (Eagle No. 3) it was found that the black powder would ignite after the blows had been repeated long enough to make the hammer cut through the wad and come into contact with the face of
  - 4. Same experiment, with leather pad over powder. The

nited only after repeated and heavy blows.

We had now obtained sufficient proof to satisfy ourselves that the "Dittmar Sporting Powder" can be, under certain conditions, exploded by "concussion or friction." A more interesting test was then made with the powder in the pressure

- 5. In a paper shell of which the cap had first been exploded, we placed 3\frac{1}{2} drs. of the "B" brand and placed a wad over it. Upon this wad rested a short iron bar, the other end of which was capped with a cylinder of lead. This was placed in the pressure gauge with the end of the steel pin of the gauge resting upon the lead cylinder. A charge powder was then exploded in the gauge, the effect of which was to force the iron bar by a sharp concussion down upon the wad and charge of Dittmar powder. The latter exploded.
- 6. The same test was repeated with 31 drs. "C" brand, and with a like result.
- 7. Repetition of 6 with same result.
- 8. A thorough test of black powder (Eagle No. 3) was then made, but the powder did not explode, although a blow was struck sufficient to reduce the grains to dust. This dust, when ignited afterward, burned with a sudden flash.

#### MORTAR EXPERIMENTS

The mortar used was a heavy cylindrical block of cast iron, strengthened by massive wrought iron bands shrunk upon it. and bolted at an angle of 45 deg. to a timber foundation sunken in the earth. The bore was 4 in, in diameter. Into the bottom of the chamber was sunk a steel disk, 3 in, thick, leaving the length of bore 5 in.

The shot, also cylindrical in shape, fitting the bore with great exactness, was 7 in, long, and weighed 27 lbs. At the centre of the lower end of the shot was a shallow cavity for the charge. In the centre of this cavity was a recess into which the exploder fitted in such a manner as to leave the fulminate of the cap in the powder chamber. From the centre of the shot to the outer end was a small hole for the passage of the electric wires, which are connected with a spark generator. In place of the wires a safety fuse may be substituted.

The method of firing the mortar is as follows: The disconnecte.l wires are first introduced into the percussion cap, and passed through the shot, the cap being fitted in place. The powder is then placed in the powder chamber, and secured by pasting over it a thin sheet of paper, care being taken so that the surface of the shot when in the mortar may not be raised even by the thickness of the paper from the steel face of the bore. The shot being in place, the wires are connected and the charge fired by electricity.

This mortar is so accurate, as shown by repeated tests, that with the same charge of the same powder-provided the composition of that powder be uniform-it will throw the shot into the same hole again and again. It is evident that it should do this, for the conditions of the mortar itself are the same in each test. Different methods of firing may, however, be employed: fuse, medium percussion cap, and stronger percussion cap; and in this way the conditions of explosion may be varied. The degree of difference in the results then gained will depend althogether upon the character of the explosive employed.

Thus a nitro-glycerine powder, like dynamite, we have seen may, according to the conditions, burn by simple ignition, or it may detonate. Tested in the mortar, we found that a charge of two pennyweights of dynamite, fired with a fuse, simply burned and did not throw the shot out of the mortar. Exploded by means of a percussion cap, it threw the shot 230 feet. Again, the same charge, when a stronger cap was used. threw the ball 241 feet. It was clear that there was here a radical difference in the natures of the two actions, and that each of these natures was developed by the condition of the explosion.

Black gunpowder, we have also seen, when exploded under different conditions, manifests at all times essentially the same explosive nature. Tested in the mortar, we found that four pennyweights of black powder (Eagle No. 3), fired with a fuse, threw the shot 146 feet. Fired with a medium percussion cap it threw the shot 162 feet, and with the stronger cap 193 feet. Here there was manifestly only more or less complete actions of the same nature.

Having determined these facts, it is evident that the mortar test is a most excellent one to determine the true nature of various explosive compounds; and that, according as the manifestations of their explosive natures when tested with fuse and cap, approximate the action of nitro-glycerine, or of common black powder, the compounds themselves ought to be classed with the one or the other. If a powder acts in the mortar essentially like gunpowder, it belongs with gunpowder; if it acts like dynamite, it belongs with dynamite.

The powder used in the mortar experiments was the "C" The tests were made to determine, first, the uniformity of the powder; second, the different manifestations of its The mortar was in each case charged detonating nature. with two pennyweights of the powder, and the greatest care exercised to secure perfect uniformity of conditions for each explosion.

- 1. Fired with a fuse. The shot was thrown in repeated trials 12ft.: 12ft. 6in.: 6ft.: 2ft.: 5ft.: 8ft. 6in.: 6ft.Sin.: 8ft. 4in. Minimum. 2ft.; maximum, 12ft.; average, 7ft. 7/2in.
- 2. Fired with a percussion cap, medium strength. The shot was thrown in repeated trials: 14ft; 17ft.; 7ft. 6in.; 9ft.; 6in. Minimum, 6in.; maximum, 17ft.; average, 9ft. 7 1-5in.
- 3. Fired with strong percussion cap. The shot was thrown in repeated trials: 126ft.; 97ft. 4in.; 149ft. 8in.; 140ft.; 150ft.; 145ft.;

Dittmar easily exploded every time. The black could be jg- 169ft. Minimum, 87ft.; maximum, 169ft.; average 138ft. 11 5-7in.

Considering first the uniformity of the results of more strictly speaking, the lack of uniformity, we find notable variations in the results gained in each set of tests. Fired with a fuse the distances which measure the ballistic force range from 2 ft. to 12 ft. 6 in., (or as 1 to 61), a range which is far exceeded when we come to the trials with a medium strength percussion cap. Here the variation is from 6 in. to 17 ft. (or as 1 to 34), a difference sufficient at all events to give some explanation why those who have shot this compound in a gun have made so perplexingly different reports of its action. These different results are best explained by the theory that in the second series of tests, the powder made only a partial man-

> In the third series, by the use of a stronger grade of caps, this detonation was made each time more complete, and we find a less startling difference of distance. Here the variation was from 81 ft. 4 in., to 169 ft. Hence, it would appear that to secure the most uniform results with "Dittmar Sporting Pow-" it must be exploded under conditions which will insure its detonation. Those are not the conditions under which the average man cares to discharge his gun from the shoulder.

ifestations of its detonating nature.

Again, comparing the results of these three tests with the results obtained by the same tests with dynamite and black gunpowder, we have:

 Dynamite
 —
 230
 241

 Dittmar
 7:7 1-2
 9:7 1-5
 139:11 5-7

 Black
 146
 162:2
 193

From this it appears that the "Dittmar Sporting Powder," in respect to the difference of its explosion under different conditions, bears a closer analogy to dynamite than to black gunpowder. Were its character to be inferred from these tests, we should be compelled to place it among the explosives which may be detonated, did we not know already that it belonged just there and nowhere else.

The figures acquired by our mortar experiments are suggestive. If we were ignorant of the composition of the powder, and of its qualities as determined by chemistry, these figures would be unintelligble. Keeping clearly before us the conditions already explained, under which explosives of a twofold nature may be exploded, by simple combustion or by detonation, we may satisfactorily account for each shot fired. from the mortar. The charge at one time simply burned, at another it detonated, in others it partially burned and partially detonsted

The "Dittmar Sporting Powder," the manufacturer claims. is twice as strong by weight as black powder. If by that it is meant that the powder, exploded under similar conditions, has greater ballistic force, the claim is manifestly unfounded.

But just here it must be remembered that detonating explosives are not properly projectile agents. The mortar experiments, which measure only the projectile work accomplished, are no true tests of the relative strength of such widely diverse explosives as black gunpowder and "Dittmar Sporting Powder." One is in its action gradual and ballistic; the other may be instantaneous and shattering.

The charge of black powder employed was four pennyweights, that being equivalent, according to the statement already referred to, to two pennyweights of the Dittmar nitrocellulose. But the latter, when given its greatest power, failed to throw the shot as far as the black powder threw it under like conditions. If the Dittmar powder is twice as strong as the black, where did all this strength expend itself? This highest possible explosion of The answer is plain. Dittmar Sporting Powder" is by detonation. In detonation the force of the explosion is exerted instantaneously and in every direction alike; no time is allowed for it to concentrate itself in the line of the least resistance. In this mortar experiment only a part of the force was ballistic or projectile: the rest was exerted against the sides of the confining clounber. The mortar had been constructed to withstand just such a trial, and the shattering force, which would have destroyed an ordinary firearm, was expended in heating up the solid mortar. If, instead of firing that charge with an electric spark and from a heavy mortar, we had fired it from a gun held to the shoulder, and with our finger to the trigger, it is extremely questionable whether we would now be writing about the detonation of the "Dittmar Sporting Powder," or, for that matter, about anything.

HABITS OF SALMON .- A step in advance toward a correct knowledge of the life history of our salmon has been made by the Fish Commission of Maine, it having been decided to label all the breeding fish in the hatching works at Bucksport with tags of platinum and then to liberate them and to continue this operation for a succession of years in the hope of obtaining more light upon certain vexed questions such as the subject of biennial spawning, etc. The similar experiments which have been made in this direction have been unsatisfactory inasmuch as they were not continued in a systematic manner, and the returns were meagre and added but little to our knowledge. The Maine Commission may accomplish much by following out their programme in a systematic manner, which we have no doubt will be done.

STEAMBOATS AND FISH.-The fishermen on the Rappahanpock River account for the scarcity of shad by the fact that a steamboat runs up the river three times a week. This may satisfy them, as they only look at this one river and have no other theory to offer, but if they will get out their telescopes and take a look at the amount of navigation, both steam and sail, on the Hudson, where one is seldom out of the sound of

the pounding of paddle wheels or the sloshing of screw pro pellers, they will wonder why there can be any shad there; yet the fact is, that of all shad rivers on this continent the Hodson is the best-that is, it furnishes more shad than any other. Evidently the Rappalannock shad have a more delirate organization than those of the Hudson, or there is something the matter with the theory.

### The Sportsman Courist.

#### OCTOBER.

T is October, and the glory of the year Is in the skies and on the woods extended for and near: It glows in burnish'd clouds, it flushes all the air: It has in hollow vales, in uplands brown and bare.

The tutted groves have lost their bright undsammer green, And now a softer russet flush creeps o'er the woodland scene: O'er distant purple hills there floats a ganzy veil, A silver vapor hovers o'er the river in the vale.

The orchard trees all glisten with globes of yellow gold That bend the bough and strew the earth with opulence untold; The ripened cornfields shake their pennons thin and white, And to a feast the chestnuts the villore school invite

The gossamer spider-web is strung from tree to tree. And up the air the thistle-down floats like a ship at sea : sters and the dahlias like flames in garder And by the roadside wild flowers display a royal show.

Dim seen, the cautious angler glides on from brook to brook Now by the open meadow, now in some bushy nook, And now across the mill-pond, with water-plants o'ergrown, I see his floating boat, and where his lines are thrown.

And o'er the salty marsh the gun's report I hear And see the snipe and curlows stop in their swift career; While o'er the open bays I see the wild ducks wheel. The red-neck and the widgeon, the whistler and the teal.

Oh! glorious days of autumn! with all your pomp of skies Your harvests and your fruits, your flowers of matchless dyes: How dear to manly sportsman your ripe, imperial time, Your sports by "Stream and Forest," in Nature's royal prime Preonic Bay, L. I. ISAAC MCLELLAN.

#### AN OLD-TIME NEGRO HUNTSMAN.

AN OLD-TIME NEGRO HUNTSMAN.

In the carlier part of this century, my father and mode—the former a judge for more than forty years—acquired in their youth a large tract of land some 15,000 acres in extent, lying in the upland and mountainous country where the Alleghanies and the Blue Ridge draw together. They were both men of large families and of large possessions, both in lands and negroes. This mountain property lay some sixty or seventy miles from the paternal mansion, and the head-quarters of our family; but for nearly fifty years it was their eastent to visit annually this grand game preserve—for such it was—and enjoy, in company with a large number of invited friends, several weeks of shooting and lunting.

A great train we were, as in patriarchal fashion we wound along the roads westward, with teams of mules and saddle-horses, wagons loaded with the good things of this life, a numerous pack of hounds, and all the implements of the chase necessary for insuring success. With what pleasure these reminions of relations and friends were looked forward to from year to year may be readily imagined, as the same party of from thirty to forty, or their representatives, as deaths or accidents made gaps in our ranks year after year, gathered around the camp fires that marked our route.

The most prominent figure in all this imposing array in sylvan matters was old Jake, my father's negro huntisman. My father and uncle themselves autocrats, as on such occasions they were, and the strictest of disciplinarians, had tacity to acknowledge the sway of Uncle Jake when he was once fairly on his horse with his pack around him. It is many long years since this faithful old servant was gathered to his fathers, but memory still recalls many incidents connected with him that are strikingly illustrative of the comical side of a race of domestics long passed away.

It is needless to say that he was inordinately proud of his hounds, which were, in truth, a well-chosen pack, munhering, perhaps, from twenty to thirry. The renown they

As huntsman he was expected to train the young dogs as they same in to foxes, and on all good hunting days he was allowed the choice of the stable, which generally contained a number of young blooded colts; and it was a noted fact that Jake never failed to single out the best horse for his own use. He was a most excellent rough rider, though there was nothing in his appearance to mark his fitness for the post of honor my mucle had assigned him. In figure he was short, thick set, and heavy built, and he sat his horse like a bag of meat; but here was something in his broad, genial, mirth-inspiring face that drew the young to him as if by magie; while the absolute control he had over his hounds, and the trumpet tones of his voice ringing through the forest, soon conveyed to you the impression that he was the right man in the right place; and when the quarry, be it deer or fox, was up and the pack was racing on a burning scent, the way in which Jake cleaved his way at a galop through the brush, or cleared the fallen was racing on a burning scent, the way in which Juke cleaved his way at a galop through the brush, or cleared the fallen logs and ravines that intercepted his career, was enough to convince you that it would require a more than ordinarily bold horseman to hold his own with him. During one of the annual bunts at which my uncle had command, a party of us were one morning wending our way to a new drive. The day before the whole pack had run off.

All the dogs, save one, however, had returned by night, and this one was still absent. My uncle expressed great concernat, as he supposed, the loss of the dog, which was hamed King, and was a special favorite. Before we had got to our hunting-grounds, however, the notes of a single hound running on what was evidently a hot scent, broke upon our cars.

"Jake," said my uncle, "that's King,"
"Yes, Mars' Sain, that's King, "Pin mos' sho."
And King it was, sure enough. He appeared to be likely to cross the road some quarter of a mile further on, and my brother received orders to galop on and head off the deer. A few minutes later the report of a gun told us of his success, and riding up, we found him standing over a fine doe, with King by his side. The dog had been running the deer apparently for twenty-four hours. It seemed certainly rather an improbable supposition, but both Jake and my uncle stoutly maintained it to be the case.

Whether it was a trace of incredulity on my part that Jake saw in my face as we were riding along together shortly after this, I know not, that made blin exclaim to me: "Why, sir, that's muthin' to what I've known them breed of dogs to do. There was wants an old red fox up that in the mountain right above Mars' Sam's, and many was the race I had arter him, but I never could catch him, 'case I was always obleged to blow off the dogs, and give him up for want of time. Well, sir, I swore, come Christmas, that cotch that fox I would if it took me all the holidays. I knowle 'zacity whar he lay, and by day on Christmas morning had him up. All Christmas day I run that fox, and bout night you never heem such a chase. Next mornin' Mars' Sam he sends one of the nigger boys to see what had come o' me and the dogs. Well, sir, I look that nigger's fresh horse, and I runs that fox all that day. 'Both night Mars' Sam sends another nigger to hunt for me and the dogs, but I takes his horse and runs that fox all that day.' Both night Mars' Sam sends nother nigger to hunt for me and the dogs, well, sir, it

"Why, Jake !" said I.
"Fac', sir! You jost ask Mars' Sam. Dem dogs, I tells you, is the rale ofe British breed, and they lows no varmint that runs the ground to git away from them once the scent

Caryswood, Virginia.

#### NON RESIDENT GAME LAWS.

HAS A STATE THE RIGHT, TO PROHIBIT A NON-RESIDENT FROM SHOOTING WITHIN ITS BORDERS?

Philadelphia, Sept. 23, 1880.

PHILADELPHIA, Sept. 23, 1880.

EDITOR FOREST AND STREAM:
There has lately been considerable discussion as to the right of the West Jersey Game Society to prohibit non-residents from shooting within its borders without a license. I have taken the trouble to look the matter up some little, and if you consider it of sufficient interest to the "men of guns," it is at your service.

The above heading was suggested to me by reading the case of McCredy vs. State of Virginia, which was decided on appeal from the Virginia Supreme Court. The case developed the following facis: McCredy, a citizen of Delaware, was indicated, convicted and fined for the violation of the following State law of Virginia: "If any person other than a clitzen of this State shall take or eatch oysters or any other shall fish in any manner, or plant oysters in the waters thereof, he shall forfeit \$500 and the vessel, tackle and appurtenances." The case was taken to the U. S. Supreme Court on appeal, and it was there argued that the State law was in violation of the 2d sec. 4th Article of the Constitution, which declares that, "The citizens of cach State shall be entitled to all privileges and immunities of citizens in the several States."

Chief Justice Waite delivered the opinion in this case, which I have condensed as much as practicable, but would strongly advise all who are interested in this matter to horrow from some one of their law friends the book, and read the full opinion. It may be found in 4 Otto, p. 391.

The Chief Justice, after citing the above section of the Constitution, said:

"This section does not vest the citizens of one State with

full opinion. It may be found in 4 Otto, p. 391.

The Chief Justice, after citing the above section of the Constitution, said:

"This section does not vest the citizens of one State with any interest in the common property of citizens of another State. The principle has long been settled in this Court, that each State owns the beds of all tide waters within its jurisdiction, unless they have been granted away. In a like manner the States own the tide waters themselves, and the fish in them, as far as they are capable of ownership, while running. For this purpose the State represents its people, and the ownership is that of the people in their united sovereignty. The title thus held is subject only to the United States'-paramount right of navigation. Subject to this right (navigation) a State can grant in its discretion to its citizens the beds of rivers, to be used as a common for taking and cultivating fish. Such an appropriation is, in effect, nothing more than a regulation of the use by the people of their common property. The right which the people of the State thus acquire comes not from their citizenship alone, but from citizenship and property combined. It is, in fact, a property right, and not a mere privilege or immunity of citizenship. Following, then, this rule, and looking only to the particular right chich is here asserted, we think we may safely hold that the citizens of one State are not invested by this chause of the Constitution with any interest in the common property of citizens of another State."

The italies in the above are my own.

any interest in the common property of citizens of another State."

The italics in the above are my own.

Following this decision to its legitimate conclusion, it cannot fail to impress one that if a State can make such a law as to oysters and fish, it certainly has the same power as to game. It will be observed that the Chief Justice words his opinion with a degree of caution when he says—'looking only to the particular right which is here asserted!" He evidently intended to leave future controversies to be decided upon their own basis, but as far as precedent does govern, it is most assaredly a strong foundation for a game society to rest upon.

The opinion continues as follows on this point: "And as all concede that a State may grant to one of its citizens the exclusive use of a part of the common property, the conclusion would seem to follow, that it might by appropriate legislation confine the use of the whole to its own people alone."

Words could not be stronger than in the closing language of the above. Taking the law, theo, as we find it, it follows as a matter of course that a State in its sovereign capacity

over the common property within its borders may grant to a body of men, or even to a single individual, a right t such property to the exclusion of non-residents of such such property to the exclusion of mon-residents of such State, and in so doing it violates no provisions in the Constitution. I do not believe that any State Game Society could convict a resident of their State for shooting without a licence, although 1 know of no decisions that cover this point. The inference is deducible, however, from the above case, that a State could not make such a distinction between its own citizens as to

Is demand, and the such a distinction between its own citizens as to common property.

A collateral question to this, I noticed, was left in statu quo in your Correspondents' column, where it was asked if a man could purchase, turn loose and kill game upon his own land during the closed season. I should certainly say "No" to this proposition; for if the contrary be the case, it would make the close season a nullity. For example, take the case of a couple of gentlemen of my acquaintance who own a large tract of quail land in one of the Southern States. Now, if these gentlemen have the right to kill game out of season on their own lands, they certainly have the power to delegate that right to as many of their friends as they think proper. It may readily be seen that in many parts of the country such a construction of the closed season would be a mere farce.

F. H. J.

### Aatural History.

#### THE FRENCH DEEP SEA DREDGING.

TE referred very briefly a short time ago to the results of the deep sea explorations carried on during the past summer in the Bay of Biscay, but at that time we were able to furnish only a few general facts in connection with the investigations made by the *Travailleur*. A recent paper by Dr. J. Gwyn Jeffreys, read before the British Association for the Advancement of Science, gives us, however, more complete information with regard to the expedition, and we therefore present to our readers some extracts which we think will be of interest to them. The dredging was undertaken will be of interest to them. The dredging was undertaken by a commission appointed by the French Government, and consisted of Mr. Milne-Edwards, President; Marquis de Folin, Prof. Alphonse Milne-Edwards, Prof. Vaillant, Prof. Merion, of Marseilles, Dr. Paul Fischer and M. Perier, of Bordeaux. At the suggestion of M. de Folin, the Minister of Public Instruction invited Dr. Jeffreys and Rev. A. M. Norman to accompany the party and assist in the work. vessel employed was a side-wheel steamer of 900 tons, of 150 horse-power, and was well fitted up with all the necessary apparatus for dredging. She had a crew of 128 men, besides the special assistants who accompanied the different members of the commission.

The expedition started from Bayonne on the 17th of July. From that time until August 1, with the exception of Sun days, the work of sounding, dredging and trawling was kept up without intermission. The weather during this whole time was fine. Dr. Jeffreys states that:

up without intermission. The weather during this whole time was fine. Dr. Jeffreys states that:

The principal object of the expedition was to ascertain the nature of the fauna which inhabits at considerable depths this part of the fauna which inhabits at considerable depths this part of the Bay of Biseny; and this object was successfully and thoroughly accomplished. Twenty-three dredgings were made for that purpose, at depths ranging from 337 to 2,600 metres, each metre being about thirty-time inches, or rather more than half a fathom. The dredgings between 600 and 1,000 fathous were the most important. Every department of the Invertebrata was well represented; and novelies were discovered in Mollusca, Crustacea, Echinoderms, Annelids, Actinozoa and Sponges. In a physical and geological point of view, this French expedition has borne good fruit. No less than 103 soundings were made. They have proved the existence, within a few miles of the coast, of a submarine valley opening from the Fosse de Cap Beton, and extending to a point opposite Cap Peñas. \* \* The striking inequalities of depth within a narrow area, which thus appeared were noticed in a Bayonne newspaper of August as "desprands fonds socu-marins, quicontinued sous les acus de Jellantique les cullies purueennes." As a general rule, it may be said that where mountains or high land approach the sea, the depth of water is greater off that coast than where the land lies low. But this must depend in a great measure on the geological nature of the land adjacent to the sea. If the formation be granitic or gneissic, the wear and tear or deundation must be slower than if the formation be sandstone, Cretaceous or Tertiary, and the action of waves and streams on the surface of the land must be proportionally increased or decreased, and must cause the sea bad to be more or less filled up in the course of time. Every where during the dredgings of the Travaillors in deep water the sea bed was found to be covered by a thick layer of mud, of a different color from tha

Very soon after the return of the expedition, a Prelimi. nary Report of the zoological results of the dredging was prepared by Prof. Alphonse Milne-Edwards, which was afterwards published in the Journal Official de la Republique Française. The mollusca, a large part of which have been handed over to Prof. Jeffreys for preliminary examination, appear to include 152 species, of which 138 were species found by the Porcupine in 1870, three are peculiarly northern, one Mediterranean and eleven new to science.

eleven new to science.

A enrious molluse discovered by the expedition is the Mythirs lutture, a mussel of considerable size, inhabiting the deep water, and living in the deep mud above referred to. Dr. Jeffreys states that "if moors or fixes itself by means of a large and densely matted byseus, which is spun by the foot. This byseus is capable of being spread over a considerable extent of surface, and it not only prevents the molluse sinking into the soft mud and being smothered or burief alive, but enables it to feed comfortably on the innumerable animalcula, which swarm on the surface of the sca bed. It is of the same use to the molluse as the snowshoe is to the Arteic traveler.

#### THE UNKNOWN BRAZILIAN EDENTATE

[Note.-The account given below by our correspondent, Mr. Linden, is extremely interesting when taken in connection with the accounts given by Mr. F. Muller in Nature last year. It is true that the two stories do not seem to agree very well and it is possible that they may refer to two different animals. It should be remembered, however, that the statements of the German naturalist were based merely upon the statements of the country people and on rumors more or less vague and not always traceable to any reliable source, while the trustworthiness of this account is vouched for by our corre-

It is hardly necessary to say that further and more detailed particulars concerning this supposed huge edentate are eagerly looked for by naturalists, and that the first specimen which falls into scientific hands will be a prize of the greatest value.]

falls into scientific hands will be a prize of the greatest value.]

It is about a year ago since the scientific world was startled by the report of a German naturalist traveling in southern Brazil, whence, in a lengthy communication to Nature, he substantiated the occurrence of a large and hitherto unknown quadruped inhabiting those forests. The animal itself had not been seen by him, but its tracks and diggings, as manifested in huge furrows channeled out in the soil of its primeral forest, supported the supposition that it was a creature of gigantic size. Notwithstanding the somewhat sensational character of the communication, it was, however, generally credited on account of the authenticity of its source.

By instituting inquiries in regard to this matter in the central valley of the Amazons, where I had spent in former years several mouths in collecting specimens of natural history, I have come lately in receipt of some facts communicated to me by one of my Brazilian friends residing there still, which tend to throw some light upon this mysterious creature. My informant, who has squatted down twelve years ago in the very heart of the Amazonian forest, has come to know, in the course of time, all its notable animals, birds and reptiles, and gives the following points of information:

years ago in the cery heart of the Amazonian forest, has chirds and reptiles, and gives the following points of information:

There are, he says, among many curious animals, three distinct and well marked species of the anteater living there. The samilest has, like many other quadrupteds of that interesting region, a prehensile tail, and is the most common species. The intidle-sized one, which, in the most minute details, corresponds by designation with the great anteater, Myrmeophagu pibala, is called by the Indian hunters in their native dialect of the fingua geral, the Tamandua bandeiro, and is not often seen on account of its sly and retired labits. The third species again is utterly unknown to the white settlers of that region, though the Indians, who have an exact nomeuclature for every large beast, bird, fish, lizard, or bestle, know it well by the name of Tamandua assu, which last adjective signifies large.

It will serve the present, purpose best to give a rough extract of the personal experience of my informant respecting a hand-to-hand encounter he had himself several years ago with one of these large and singular animals. Our dogs, he says, while we were one day out hunting for peccaris, came upon the track of some strong scented beast, as evidenced by their excited actions and loud barkings. Following closely upon their heels, I got sight of a creature larger, though less bulky, than the tapir, called here in the Indian dialect the mata. But little exertion was needed to come up with it, as it moved rather slowly, and allowed myself and my brother to get close to it in a short time. We were anned with single barrelled shot-gun, loaded with coarse shot, and an efficient breech-loading rille. My brother fired first when about twenty ards from the animal, but although the ball upon later examination was found to have passed throughout the whole length of its body, it never slackened its speed, and only stopped running when at last cornered closely by the dogs.

It then raised itself, after the manner

ported.

Buffalo Society of Natural Sciences.

Tame Quart.—St. Joseph, Mich., Aug. 30.—A few days ago I went into the country a few miles and stopped with a friend over night. As we stood at the gate talking in the edge of the evening, he said to me, "I want you in the morning to step over in that field and see some tame quait (Ortyx sirginiamus)." It did not see them the next morning, but went out again in a few days, and getting there just at night, went to look for them. They are domesticated with a flock of tame turkeys of about twenty—two hens and about eighteen young. The young are about half grown. I found the turkeys at roost up in some apple trees and the quail on the ground near the trees. The latter ran off as I approached with my dog. They soon, however, returned. On making inquiries, I learned that the

turkeys hatched their young out in a field near the house. They came up at night and morning and were fed at the house, and rambled off during the day. One night, when the young turkeys were two or three weeks old, three little young quail came up among them. They have been with the turkeys ever since, and are now full grown. For the first

the young turkeys were two or three weeks old, three little young qual came up anong them. They have been with the turkeys ever since, and are now full grown. For the first two or three days they were somewhat shy, but since then they come around and feed and are as gentle as the turkeys. When first seen the young quait were not larger than chipping sparrows. They brooded with the young turkeys under the hens till the young turkeys went into the trees to roost. The owner told me he had not watched where the quail roost, but one time saw them on the fence, and saw one fly up into the tree. In following the turkeys, if lost in the grass or weeds, they call, and the hen turkeys answer them, and go to them just as they do for their own young. The next morning I went out and saw them all together in the road. At my close approach with dog they run in the tilckest group to them just as they do for their own young. The next morning I went out and saw them all together in the road. At my close approach with deg they run in the thickest group of young turkeys near the old ones. How they come with the turkeys is not known. My theory is that the old hen quail got killed, and the young ones came across the brood oil, resembled the hen quail in size, and they followed and remained with them. Do any of the readers of the Forest And Stream Know of an instance like this?

The owner of the turkeys told me that some years ago, when the country was new and little settled, a neighbor of his had a hen come up with five young quail with her brood of chickens, and that they grew up with them. They stayed all winter, and three of them layed next spring and remained till fall, and then two of the coveys stayed away more or less, but one covey remained entirely domesticated. I shall keep posted to see if they get through the winter without being caught.

ing caught.

The European Ripp in Mass.—Mr. Gordon Plummer, of Brookline, Mass., has just secured a fine specimen of the European ruff (\*Philomoclas pugnax\*), taken in Chatham, Mass., Sept. 11, 1889. It is a young male, and is recorded as the ninth specimen for North America, third for New England and second for Messachusetts. The other two New England specimens were taken, one female at Newburyport, Mass., 1871, and the other female at Upton, Me., 1874, and are in the collection of Mr. William Brewster, Cambridge.

The Sun and Full Moon Smultaneously Visible.—
Sir Henry Holland in his "Recollections of a Busy Life," notes with special interest the fact that on one occasion, while sailing upon the Mediterranean, I think (the book is not by me), he saw the sun and full moon at the same moment above the horizon. This occurrence I have frequently witnessed since having attention called to it, and notably on yesterday and this afternoon. The repetition of the phenomenon on two successive days is due to this being the harvest moon. Your renders will doubtless recollect that it is a peculiarity of the moon when full during this month, and in October, to rise for several nights successively with very short intervals between the periods, from which circumstance she is called the larvest and the hunters' moon for those two months respectively. If your renders will observe carefully next month when the moon is at her full, provided the weather is clear, they may see in some localities the occurrence that Sir Henry deemed of sufficient rarity and importance to note in his very agreeable and readable book. Yours respectfully, Cambridge, Md., Sept. 18, 1880.

E. G. W.

The Oddstrines.—A few advance copies of Prof. Marsh's Memoir on the Oddstronithes, or toothed birds, from the Cretaceous of Western Kansas, have been distributed by the author. The volume is of the very highest scientific importance, and the mechanical part is done in superb style, making it really a livre de luxe. We shall take occasion to speak at length of its contents at a future day.

### Fish Wulture

How the Prist Shad Were Hatched.—Editor Forest and Stream: I am quite sure that Mr. Milton P. Pierce, whose letter was published in the Forest and Stream of Aug. 26, is under a wrong impression in regard to some of the things he wrote about.

I was with Mr. Green at Holyoke a part of the time when he began his experiment there of hatching shad, and know from personal observation what his methods were. Mr. Pierce says that he began to latch shad in the river, and, not succeeding, changed his base of operations to a tributary laving coller water, where he succeeded.

Now, this is the exact converse of the actual facts. Mr. Green began by trying to latch shad eggs as trout eggs had been hatched, viz.: in a brook with trout hatching apparatus, that being the only way of batching fish then known in those primitive times, and the result was that all the shad eggs died, and Mr. Green narrowly escaped a sunstroke. He became discouraged and was about ready to pack up his things and return home, when the idea occurred to him (how suggested I do not claim to know) of hatching the eggs in the river. The very first experiment in the river water succeeded, and was followed by a continuance of successes, which had their crowning triumph in the invention of the shad hatching boxes.

Without having any desire to enter into any controversy

their crowning triumph in the instance.

The boxes.

Without having any desire to enter into any controversy on the subject, I feel as if I ought to say what I have in justice to the originator of shad hatching, who, through his tribulations at Holyoke, succeeded at last in confering a vast benefit upon the shad-cating people of the world.

Living-row Stone.

U. S. Fisherw, McCloud River, Cal., Sept. 23, 1880

QUINNAT SALMON LAND-LOCKED. -The following note from Mr. N. K. Fairbank, Commissioner of Fisheries for Illinois, tells its own story of the ripening of California salmon eggs Geneva Lake, Wis., where the fish have been planted. Under date of Sept. 23 he says :

Under date of Sept. 23 he says:

I have sent to-day to Prof. Baird, a very fine specimen of a California salmen, weight 54 pounds, a female, full of well-developed, ripe eggs. She was taken by Mr. Welsher, who has charge of my hatching and ponds here, on Monday last, in the small creek which campties into the lake. The day before he saw seven or eight together, which he judged would weigh from eight to twelve pounds each, but had no means of capturing them at that time.

It begins to look like breeding salmon in fresh water, but

I shall not assert it for a fact until I know, but I will assert

my belief in it now.

I do not believe that salt enters into, or is any essential an element in the problem. I believe that with clear, deep water, and plenty of food and room, the salmon will propagate in fresh water.

N. K. Fairbank

Geneva Lake, Wis.

New Hampshire.—A friend informs us that the Fish Commissioners of New Hampshire have been busy for the past year stocking the waters with land-locked salmon and trout and are now beginning to hear of the growth and success of the former in many waters. The pike-perch planted in 1875 in Sunapee and Masseduseic lukes have reappeared in their progeny, many of which have been captured in those waters after having heen given up as lost. Mr. Samuel Webber, one of the commissioners, took nineteen fine salmon at the hatching house at Plymouth previous to July 9, since which time low water has prevented their ascent, but there are hopes that the fall rains will enable another run to go up, as many more have been seen below during the summer in various places along the Merrimac and Penigewasset in the deep holes at the mouths of cold spring brooks. The drought in the State has been very severe and many of the smaller trout brooks have been almost dry, and it is fortunate that the commission has breeders enough left to raise 100,000 or more from whereby to restock the streams.

Our informant says that black loss sishing in Sunapec Luke has been excellent all summer and many large fish have been taken.

Nebraska.—The Nebraska Commission is working hard with the exceedingly limited means at their disposal, and have 130 German carp which they are keeping for breeders to raise fry for distribution. They are preparing to hatch 500,000 eggs of the quinnat salmon this fall, having planted 100,000 of them last spring from the hatching of the previous

### SPRING SPAWNING SALMON-THE GRILSE.

THE SALMON'S EGG.

THE SALMON'S EGG.

THE spring spawning salmon ought to be an object of Inmade to propagate from this varety, possibly because the existence of spring spawners in America has not been reorgized, although long known to Indians and beckwoods men. The nests I saw in July, 1894, on the Miramichi were seven in number, on a small shoal. The eggs, deposited in March or April, would havel about the first week in August, or later, according to the depth of the smowfall, and the temperature of the water in May or early in June. We do not know that the eggs are deposited in March under the lee—it is probable that this is the case.

A curious question arises as to the present maintenance of the supply of salmon in our rivers. To which class are we to attribute the keeping up of the supply with advancing civilization, and all the changes it brings into the physicacharacters of the streams? Is it due to the fall spawners, which every one has patronized, or to the spring spawners which every one has patronized to the total spawners, particularly in Newfoundland, where the practice of barring the rivers in the summer months has so long prevailed; and yother inversis the summer months has so long prevailed; and yother inversis the summer months has so long prevailed; and yother inversis how a fair supply of fish, but very far from the original wealth.

It is not remarkable that fish culturists have failed to recognize and use the spring spawning salmon for propagation because the time for capturing the fish is the worst possible. The woods are exceedingly uncomfortable in March and April from melting snows, the rivers often choked with iconal full. The whole surroundings of camp life, except the beautiful sikies, the breath of spring and the coming birds are uppleasant. But, considering the poor results from valual particularly in the habits of the sulmon, for we do not yet possibly know whether a fall spawning salmon may not, underestion conditions of temperature and food, become a spring spawner, and trice verse.

The great majority of grilse do not ascend rivers for the sole purpose of maturing spawn. Male grilse are known to mature milt, but female grilse, as a general rule, are not spawning fish. Like the herring in its third year, only a very small proportion of grilse are ready to breed. They ascend the rivers as grilse, and return as grilse or immatuse salmon. This being the case, we ought to catch a greater

ratio of grilse than of salmon, because the chances of escape rane or griss than or salmon, because the chances of escape are against the grilse. The salmon going up stream are of two classes: 1st, the breeders, which remain until late in the fall, after all nots are raised, and return as kelts. 2d, the are games the grilse. The samon going up stream are of two classes: 1st, the breeders, which remain until late in the fall, after all nets are raised, and return as kelts. 2d, the migrants, which stay a short time and return to the sea during the season when netting is possible. Let us suppose that the number of grilse entering a river be 100, 19 per cent of which are breeders; and of salmon, 100, fifty of which are breeders; and off the meaning the same of the meaning the same same same as the same of possible are strice—going up and coming down—for both grilse and salmon have to run the gauntlet of the nets and of poachers twice—going up and coming down—for both grilse and salmon are caught on the stream side, as well as on the lee side, of nets in a river, but only on the ket side in tidal waters or against the current. The fifty breeding salmon and the ten grilse are safe if they pass the nets, for they return to the sea when the nets are taken up. It follows, from this assumption, that the 100 grilse will diminish more rapidly than the 100 salmon, because the chances of escape are against them. Now, what does practice say? The following table shows the catch of salmon and grilse in the sea, at the month of the River Dee in Scotland, for thirty-two years, viz., from 1828 to 1839. The averages are for each group of seven years, with the exception of the first group;—

Salmon cause in. Minaber of Sumber of Sumb

The tollowing at the scanning for the decline, where the chances against the grilse are greater than a gainst the river where the classification. The tollowing a superficient of the decline in the produce of the salmon fisheries in the Dee and the Don." He attributes the cause to the use of the stake net and bog nets on the coast.)

In the sca the chances were the same for salmon and grilse, but the grilse entich declined to one-half in thirty-two years, the salmon catch increasing. Therefore it is to the river we taust look for the chief cause of the decline, where the chances against the grilse are greater than against the salmon. The tollowing table shows the proceeds of the river fishings for one mile from the mouth of the Dee, after the fish have escaped the sca-dishings in the estuary and along the shore:—Seurs. Solmon. Grilso.

rs52 to 1838 (7 years).... 1839 to 1845 (7 years) 1840 to 1852 (7 years).... 1853 to 1859 (7 years)....

iss to 1882 (i years). '999 1,677
1833 10 1839 (i years). 1,991 1,593
The grilse catch fell enormously short in the river, where their chances of escape were less than those of the salmon, because the greater proportion returned, or endeavored to remain, to the sea before the nets were raised. Experience, no doubt, had something to do with the less take of salmon, which had learned to ware the nets.
Forest and Stream of Oct. 21, 1879, contains a notice from the Field of the wretched salmon fishing in the Tay. If we divide the years mentioned into groups of five, so as to get an average, the conclusion we arrive at is that decline is setting in, because the grilse are diminishing in a greater ratio than the salmon. The figures are as follows:
From 1837 to 1841, 100,388 salmon, 189,483 grilse—salmon calculate of grilse catch as 1 is to 1.58. From 1842 to 1846, 648,160 salmon, 229,039 grilse—salmon catch to grilse catch as 1 is to 1.54.
If there appears from these tables that the ratio of grilse to salmon was diminishing in the Tay, and unless protective

If there appears from these tables that the ratio of grilse to salmon was diminishing in the Tay, and unless protective measures had been introduced, the decline would have been nore rapid, and this resulted from a babit of the fish at different stages of its life.

In the river Don, in Scotland, the same results followed in the Cruive fishings, as may be seen from the following table, which extends from 1783 to 1852, a period of seventy-one years (A. Jopp's tables).

Sea front are added to the grilse catch, but they only serve to mask the more rapid decline of the grilse; they do not affect the general conclusions. The periods are septembed:

Weight of Grilse
Salmon in Founds.

Weight of Grilse
Salmon in Founds.

158 to 1536.

entangly com winter one may expect (other things being equal) a very good salmon year.

This is a curious and interesting subject of inquiry, and I shall ask for space to advert to it in another communication, closing the present one with some remarks on the egg of the salmon.

#### THE EGG OF THE SALMON.

The focundation of the egg is a wonderful phenomenon, The egg in relation to the milt presents one of the most astonuishing spectacles, if rightly viewed, which microscopist and philosopher" can witness. To those of your readers who have not given any attention to this subject it may be thus briefly described. (For a full description vide Dr. W. H. Ranson on the own of oseous fishes; translation of the Royal Society, London, 1866.)

The egg of the sulmon of the size of a pea consists of a semi-transparent spherical mass, whose tough external covering is penetrated by a very minute funnel-shaped opening,

termed the micropyle. The milt of the male contains a vast assemblage of exceedingly minute organisms, styled spermatozooids may be equal in bulk to one egg. Taking a minute quantity of milt on the point of a fine needle, and putting it into a drop of water in counted with an egg, the careful observer may witness the following consequences with a good microscope: The number of spermatozooids wandering vigorously round the passive egg, traveling over its surface with considerable activity. Suddenly pulsation begins in the egg, a new life has dawned and the micropyle specific contracts. Suddenly, pulsation begins in the egg, a new life has dawned and the micropyle specific closes. Other spermatozooids continue wandering over its surface, but in fifteen or twenty minutes grow weary, languish, drop off and die. But vivid pulsations continue in the egg, and the new creature is forming. Let us carry the thoughts which may crowd upon us to a further issue. We have had under view two imperfect lives, that of the active spermatozooid enters the nicropyle a new and a perfect physical life begins, which, as we shall presently see, already possesses absolute knowledge of a special kind, requiring only a short time for its manifestation.

Two of these eggs thus "fertilized" are conveyed far away, say to Australia, and these placed in a river in which salnon had never been. The eggs are hatched, the young fish in due time migrate to a sea of which their ancestors had no experience, and return to a river of which they knew nothing, and where there are no teachings to be gained from the experience of others of their kind. How did they obtain this absolute knowledge—knowledge not gained by experience, list of the experience. It is clear that out of two imperfect lives a new life possessing absolute knowledge—knowledge not gained by experience in the row in perfect lives a new life possessing absolute knowledge—knowledge not gained by experience in the row in perfect lives a new life possessing the source of the egg and the sper

It seems to me that the conception which is so often designated as an "inherited habit," is a manifestation of design, infinite in its variety, endless in its future attainments, and crudely spoken of in the too often misleading language of philosophy by the barren term "evolution," which, properly used and interpreted, indicates only a part of design. The possession of absolute knowledge by the embryonic salmon, and all similar cases, is fatal to the materialistic view of evolution. How the results of exteriors are higher than the same of the contraction. and all similar cases, is tatal to the materialistic view of evo-lution. How the results of experience can be conveyed from the parent to the spermatozooid or to the egg—for habit is de-rived from the feunda as well as from the made—we may never fully understand, but that it is an effort infinitely be-yond the mere "potency of matter" we may adoringly be-lieve.

EEL TRAPS WHICH TAKE BASS-LEGAL DE-

OSWEGO, N. Y., Sept. 3, 1880.

HOR years the sportsmen of this vicinity have sought legislation to aid them in protecting the fish and game of this portion of the State from improper and reckless destruction, and many good laws to-day exist upon our statute books as monuments of their carnest labor. But one nuisance still remains, and I desire to call the attention of the lovers of fish throughout the State to the present ineffective law, in the hope that a remedy may be thus brought about. The Legislature of 1879-80 passed certain amendments to the game law as cancated in 1878 9, one being contained in Chapter 531 of the laws of 1880. A portion of Section 3 of this Act reads as follows:

as follows:

'No person shall kill or catch, or attempt 10 kill or eatch

as follows:

"No person shall kill or catch, or attempt to kill or catch, any fish except minnows in the waters of Lake Ontario on the American side thereof, \* \* \* or in Onondaga, Oneida, Sencea or Cross lakes, or in any of their outlets or tributaries, \* \* \* in any way or manner, or by any device whatever, except with that of hook and line," etc. This portion of the section was especially prepared, and was supposed to be all that was necessary in order to render lilegal the cel weirs in the Sencea, Oneida and Oswego rivers, by means of which it is claimed that not cels only, but thousands of black bass are yearly caught. With this idea, the Leatherstocking Club, of Oswego County, directed their attorney to notify the owners of the cel weirs in Oswego River of the existing law, and to demand the removal of the weirs, which he did. The eel fishers refusing to obey the instructions of the club, an action was brought to compel the same, and than action having been in one form referred to the Hon, Win, C, Ruger, of Syracuse, a decision was rendered therein by him, from which I quote below:

a nectsion was reducted therein by him, from which I quote below:

"SCPEEME COURT—The Leatherstocking Club, of Oswego County, against Lowis Fuller, Jr., and George Montague.

"The above entitled case having been duly referred to me to hear and adtermine, and I, having heard their proof and allogations, do respectfully report as follows:

"I had the following points:

"The plaintiffs are a corporation under the laws of this State, and do business at the City of Oswego, and are duly authorized to bring the above action.

"That during the months of May, June and July of the present year the defendants were engaged in the business of catching esic in the Oswego River by a device known as eleweirs, and caught daily, by such device, from two five hundred cels.

"That the method of constructing such weirs, and of taking said cels, does not involve the use of a hook and line in catching said cels, does not involve the use of a hook and line in catching said cels, does not involve the use of a hook and line in Calching said cels, does not involve the use of a hook and line in Calching said cels, does not involve the use of a hook and line in Calching said cels, does not involve the use of a hook and line in Calching said cels, does not involve the use of a hook and line in Calching said cels, does not involve the use of a hook and line in Calching said cels, does not involve the use of a hook and line in Calching said cels, does not involve the use of a hook and line in Calching said cels, does not involve the use of a hook and line in Calching said cels, does not involve the use of a hook and line in Calching said cels, does not involve the use of a hook and line in Calching said cels, does not involve the use of a hook and line in Calching said cels, does not involve the use of a hook and line in Calching said cels, does not involve the use of a hook and line in Calching said cels, does not involve the use of a hook and line in the calching the calching the calching the calching the calching the calching the calching

That the defendants had been in the exclusive possession of said ed weirs and the practice of taking such eels in the manuer and at the place aforesaid for the period of thirty-five years at the time of the commencement of this action.

"And I do find on questions of law:

"Ist. That it was not the intention of the Legislature wholly to prohibit the taking of eels by means of eel weirs in all of the fresh waters of the State, for the second paragraph of the section of the statute under which this action is brought either expressly or implicitly authorizes the taking of such fish by such means in all of the fresh waters of the State except

those where such taking is expressly prohibited in the first paragraph of the section, so that it cannot be argued that the prohibition claimed is within the spirit of the enactment, if it be not found in this very letter. See Sec. 23 of Chap. 534 of the Laws of 1879, as amended by Sec. 1 of Chap. 534 of Laws of 1880.

1860.
'If the prohibition claimed is found at all it must be em

"If the prohibition claimed is found at all it must be embraced within the specified descriptions of places enumerated in the first paragraph of such section.

"It is conceded that the bests in quo is not specifically described in such first paragraph, and is not included therein unless it is embraced by the general term "outlets," as applied to the said waters of the several lakes, "Onondaga, Oneida, Seneca, or less," and the question to be determined is whether the Seneca and Oswego rivers are intended to be described under such general term or phrase.

"The Seneca and Oswego rivers are both large and important streams of water flowing over a large section of territory.

"The Seneca and Oswego rivers are both large and important streams of water flowing over a large section of territory, having designated and specific names coveral with the earliest history of the country, and repeatedly described in the legistion of the State by such names.

"I cannot believe that it has intended to describe the waters of such rivers by the use of the vague and uncertain phraseology used in the Act in question. To bold otherwise would be to deprive the term outlet of all special meaning, and to confer it upon all of the various channels, both mediate and immediate, by which the waters of a specified body pass in their course from their source to their final destination, the ocean.

The same laws which would make the Oswego River the "The same laws which would make the Oswego River the outlet of Oneida Lake would make each of the following rivers and lakes, viz.: the Oneida, Seneca, Oswego, Omario and St. Lawrence waters included under the phrase, 'outlet of Oneida Lake,'
"I therefore hold that the acts of the defendants in taking

"I therefore hold that the acts of the defendants in taking cels from the Oswego River in the manner described is not a violation of the provisions of the statutes.

"2d. The defendants are entitled to a judgment, dismissing the plaintiff's complaint with costs, and the same is here by ordered.

WM. C. Regel.

by ordered. "Aug. 14, 1880."

Fish Parasites.—Philodelphia, Sept. 7.—A friend and myself went out this A. M. with small dip-nets to catch some minnows for my aquarium, and the first catch we made we noticed that they were unusually large around the body, the largest of them two inches long. We took one of these and minnows for my aquarum, and the first catch we made we noticed that they were unusually large around the body, the largest of them two inches long. We took one of these and opened it, and found it to contain a worm about two inches long of a reddish hue and pointed at both ends. It was not in the intestines of the fish, but between them and the body of the fish. We opened another and it had two in it, but not so long as the others. We made another catch and opened more of them, and found they were all the same. When taken out the worm is coiled up in a knot and looks just like a piece of red sewing-thread twisted up with your fingers. The place where we caught them is a creek which comes from a woods about a mile from where we were and runs into the Scinyllill river through a marsh and a distance of about one hundred and fifty yards from the river. The tide rises and falls with the tide in the river. Is there anything, do you suppose, to cause those worms in the fish in the creek, as the minnows we caught on the other side of the river had none in them? Are they not a parasite, and fit in larger fish would it not be injurious to eat such fish? Please answer, and oblige

Thouas J. Chadwick.

A similar parasite was shown at a meeting of the American Fishcultural Association some two years ago by Mr. H. D. McGovern, who claimed that it went through one of his trout from side to side, thereby killing it.

We do not think such a worm would live through the cooking which fish usually get; or, if it did, it would live in the stomach of a warm blooded animal. As you find them so plenty, why not send some of the fish to the National Museum at Washington, and you will then learn all about them in the course of a few weeks or mouths, according as other work may press. Then, when you find what they are, send us the account for the benefit of those who are interested in such

matters.

RANGELEY LAKES.—Of these famous lakes of Maine, where the brook trout grow up to ten pounds or more, a correspondent writes: "One of the most attractive points about this region is the exceedingly moderate sum of money which one can dispose of during a vacation. It costs but \$12.50 to get from Beston here and back, by way of the Eastern, M5-7c Central and Sandy River Railways, and the journey is pleaf ant chough to amply repay one for the outlay in time and money. A stage line or private convexance brings passengers from the terminus of the railroad, at Phillips, Maine, to Estey's, at the head of the upper, or Rangely Lake, over a road tventy miles in length and peculiarly rice in in scenery. From Estey's a little steamer called the Molly-chunk-amms, built and run by C. W. Howard, sall own to the outle, where the Mountain View House entches all the passengers. Board at the lakes ranges from \$1.50 to \$2.3 day in June and September, and from \$1.08 (1.50 in July and August. The greatest rush has always been in June and September, and from \$1.08 (1.50 in July and August. The greatest rush has always been in June and September, ultime.

"The busins of the Rangeley Lakes contain the drainage."

when the fishing is liveliest. But this year the borels have been full all the time.

"The basins of the Rangeley Lakes contain the drainage of about time hundred square miles of territory, and it is estimated that their waters measure twenty-four million entities feet. They blend with the ocean through the channel of the Androscoggia River, and are utilized in various ways. At Leviston, in this State, they furnish power for manufactories, and in the spring of each year they float millions of logs from off these rugged hills to an eager market on the coast. The seven lakes forming this chain are all navigable, but their names would demoralize any spelling match in America. They are as follows: Oquosso, Mosselucinagnuire, Cupsuptic, Kennebago, Molechunkamnak, Welokennebacook and Umbagog. Noah Webster would have given one howl of despair and yielded up the ghost had he ever been invited to tackle these fellows. And it is only when I am in particularly robust health that I dare to write them. The woods which thickly fringe these bills and fill the air with scent of spruce and cedar are populated with deer moose, caribou hack bear and other game, which brings for to the shootist's hearts. Within three or four days a caribou has been killed within gunshot sound of this point, and it is no unfrequent thing at any time of year to find venison upon the tables hereabouts under the vargue title of "wild mutton."

Hard is be to please who ccannot find recreation and such surroundines, and tame must, be the best of him to when the surroundines and tame must, be the best of him to when the surroundines and tame must, be the best of him to when the surroundines and tame must, be the best of him to when the Hard is he to please who cannot find recreation and such surroundings, and tame must be the heart of him to whom the billows and sand and champagne cocktails of the seashors

are greater joys than the buoyant rest of the mountains, the soft lapping of fresh water wavelets and the balsamic sec great, deep forests, such as these."

great, deep forests, such as these."

Growth or Care.—A living carp is now on exhibition in the acquarian at Blackford's, in Fulion Market, which weighs one pound and eleven ounces. It is one of a lot sent from the National Carp Ponds at Washington one year are, which then weighed about two ounces, and were placed in the pends of Mr. H. D. McGovern, in Brooklyn, where they have since remained.

Mr. McGovern has occasionally fed them with oatmead dough, but the most of their food was obtained in the pond, and consisted of the roots of sweet dag and water cresses. There can be no possible doubt concerning this growth, which it would have required from three to five years for a trout to

nere can be no possible doubt concerning this growth, which it would have required from three to five years for a trout to have obtained, as previous to this there were no carp in my waters on Long Island. Other specimens in the ponds are said to be even larger, and the citizens of Suffolk County will have a chance to see some of them at their fair at Riverbead, Oct. 5 to 7, as Mr. McGovern has promised to make an exhibit of them, as well as trout and black bass, in tanks during the fair.

schibit of them, as well as trout and black bass, in tanks during the fair.

A Tennessee correspondent tells us that where the protective have have been enforced in his State the game fish have multiplied to a great extent and are quite plenty. The Fish Commission planted 500 German carp of last year's hatch in ponds near Nashville, and they are now on an average two and a quarter penads in weight; showing their perfect adaptability to the water and climate of Tennessee, as indeed they have to every other place where they have been tried. The commission of this State deserve great credit for their work from the fact that their Legislature has never given a dine toward defraying the expenses of their valuable labor in restocking the waters, an oversight which we hope the next ene will correct. We are pleased to learn that Col. Geo. F. Akers has been reappointed Fish Commissioner for Middle Tennessee by the Governor on the 23d inst.

Frsons KILL Carp.—That large frozs devour many small.

one will correct. We are pleased to bearn that Col. Geo. F. Akers has been reappointed Fish Commissioner for Middle Tennessee by the Governor on the 23d inst.

Froos Kill Carp.—That large froeg devour many small fishes is well known, but that they are destructive to intererence we think has not been observed in America, where we have froeg greatly exceeding any European ones in size; still, in the account given below, it does not appear that the froeg actually at the diels of the fish, but merely attached itself to it as a sort of parasite until biladness and the loss of the protecting sline resulted in death. We reproduce this transatilatile observation on this strange habit in order that our carp breeders may be on the watch for a similar action upon the part of our own batrachians. The story comes from a Sitesian newspaper, which requests German naturalists to observe a curious propensity of the froeg alleged to have been discovered during the draining of some large carp-ponds upon Comi Schafgotsche's estate of Warmbrunn. Upon transferring the fraining of some large carp-ponds upon Comi Schafgotsche's estate of Warmbrunn. Upon transferring the fish from these preserves to baskets, for the purpose of conveying them to tanks wherein they might disport themselves while their old familiar quarters were being cleaned, it was observed that froeg were cluding to the backs of many of the larger carp. Most of the fish thus berilden were blind, the freys fore feet being found firmly fixed in the cye-sockets of their victims. Interrogated respecting this strange phenomenon, the chief pond-keeper told our contemporary's informant that, according to his experience, extending over several years, froegs were the deadliest enemies with which carp had to contend, and caused an annual mortality among the fish under his care of from three to four per cent. of their total number. The froegs object in bestriding the carp, he said, was to feed upon the sliny matter that so frequently forms a sort of spong crust on the heads and b

tory skill and merelless appeinte.

An Enerstee Firm Hook Fert Levis, Pagesa Springs, Col., Spd. 20.—While eleming some Rocky Mountain front, which we had caught in the Piedra. I felt a sharp object inside of one of them, and on looking, found it to be a large-sized hook, such as the Mexicaus and Indians use. It was completely eneased in a bag or cyst of skin that had formed around it. Think of an animal living with such a thing in his stomach! Yet he jumped for the fly that caught him, and gave as much play as a fish without so much hard steel inside. Verily fish do not feel pain. The hook and skin are preserved in alcohol. Will you please tell me if there is a paper solely devoted to fishing called the Sea World and Fishing Gazette, also the price?

We have not seen a copy of the paper referred to in three

We have not seen a copy of the paper referred to in three months, and hear that it has suspended publication, but whether for lack of support or because the editor's scrapbook was all exhausted, or both, we do not know

book was all exhausted, or both, we do not know.

Detriour Notes.—Detroit, Mich., Sept., 26.—Last Saturday right Hon. John S. Newberry, our sporting member of Congress, his partner and companion in all things, James McMullen, Henry B. Ledvard, General Manager of the Michigan Central Railroad, and Hugh McMillan returned from St. Clair flats, where they spent little more than a day, and caught (honor bright) one hundred and twenty-five pounds of black bass, whose average weight was three pounds of black bass, whose average weight was three pounds.

Mr. and Mrs. D. D. Post, of this city, left the Star Island House Saturday morning at 7 o'clock and returned at 3 r. w. with 25 splendid bass, the smallest one of which weighed 4 pounds, and the largest 64 pounds. The total weight of the catch was 116 pounds.

SHARK KILLING.—Lieut. Monroe, of the revenue cutter Hamilton, has projected a novel method of taking sharks. Upon a large hook he places a beef liver contained in a net. The hook is attached to a line containing an electric conductor attached to a battery on the boat. In the bait he places a vial of powder, which is connected with the conductor, all baits resort to some your way to have a supersort to the conductor, all baits resort to some your three terms are the conductor, all being ready he pours upon the net and contents a bucket of sheep's blood and heaves it overboard. The blood mixes with the water, and by its odor, or otherwise, attracts the man-caters, and he is not long without a bite. Once satisfied that

the hook has struck, he explodes the powder in the bottle by the battery, and, behold, the shark appears floating on the surface of the water harmless and uscless.

#### ECHOES OF THE "DITTMAR SPORTING POWDER"

Indianapolis, Oct. 2, 1880

Editor Forest and Stream:
You have placed the sporting fraternity under profound obligations in your expose of the "Ditmar Powder." You have demonstrated my previous convictions concerning its II. G. C.

East Brimfield, Mass., Oct. 2.

Editor Ferest and Stream:
I was thinking of using Ditmar Powder, but must thank you for telling the truth about it; as Hosea Biglow says; "By Heaven, I like a man who ain't afeared." M. H. R.

#### Extract from a Private Letter,

I have been astonished to see parties shooting it. Our club tried it well and concluded that it was not safe. I consider that you have done the sportsmen of this and no doubt other localities a great favor by denouncing it.

Fernandina, Fla., Sept. 27.

Editor Forest and Stream . Editor Fored and Stram:

Permit me to add my quota of thankfulness for the most able and satisfactory expose of the dangers of Dittmar powder, which appears in your last issue. You may rest satisfied that you will be most gratefully upheld by all good sportsmen for you have opened our eyes to a danger to which many have been innocently exposed.

GRAHAM.

From the Now York Star, Oct. 3,

The absorbing topic of conversation in sporting circles at the present time is gunpowder. It appears that several accidents have lately occurred, owing to the use of a nitro-cellulose powder, which explodes by detonation like nitro-glycerine. Mr. Dittmar, the patentee of the powder, is said to have admitted that it was a "gun-buster" at one time, but he avers that it is now O. K. Hence the difficulty.

avers that it is now O.A. Hence the difficulty.

From the Ningre Falls Greatte, Spit, 29.

The "Dittinar Sporting Powder" is the subject of a leading editorial article in Fornest and Streem of September 23. The pretentions of Mr. Carl Dittinar are thoroughly exposed, and the dangerous nature of the compound he manufactures fully explained. The sportsman who uses the Dittinar powder does so at his peril. At least it would be to his advantage to read the fourteen column article on this subject in Fornest AND STREAM. The editor is entitled to the thanks of all sportsman who discards the old and reliable gunpowder for the Dittmar is a foolish man, liable at any time to pay the penalty in bursted gun and mutilated hand.

Рипарегрита, Oct. 2

ditor Forest and Stream:

I have just finished reading the Dittmar powder article, and Thave just fluished reading the Dittmar powder article, and if the powder is not "squelched out," why all 1 have to say is, it is hard to squelch. I have used the stuff to a small extent, but never liked it. I had a few shells that have been leaded more than a year with the Dittmar mixture, but when I read the communication that Sulton & Morehouse sent to II. C. Squires, in reference to shells that had been loaded some length of time, I immediately looked over my box and haid out all the "D" shells, and having occasion to go down the river this morning I took them along, and when I reached a point in the channel between the Shore Buoy and Red Bank, where the chart gives us forty-three feet of water, I consigned the entire lot to a grave whence they will never be resurrected. So much for Dittmar powder.

(C. C.

Newaus, N. J., Oct. 4

Editor Forest and Stream:

Billion Forest and Stream:

1 cannot resist the impulse to write you my hearty thanks for your articles exposing the dangerous nature of the Dittmar powder. As one who is devoted to fishing, and one who occasionally fires a gun, I would say that I depend to a great extent upon the current literature relating to the latter for extent upon the current iterature relating to the latter for any knowledge pertaining to firearms. As such I should undoubtedly use and continue to use the Dittmar powder had not your truly public spirited article informed me of my danger. I detest flattery from the bottom of my heart, but must, say I admire the enterprise and pluck of editor and proprietors, which cannot be otherwise then praised and indorsed by every true sportsman.

W. L. Shinkle.

#### BRIDGEPORT, Conn., Oct. 1.

Editor Forest and Stream:

Bélior Forest and Stream:
Allow me to compliment you on your able and effective article of last week concerning Dittmar powder. I have distrusted and considered it a dangerous compound since I saw a ritle barrel weighing nine pounds burst into small fragments by a charge not exceeding in bulk 70 grains of black powder. Mr. Sale, the owner of the gun, narrowly scapped injury, one piece passing through his hat. He wrote to the

company threatening to sue for damages, but beyond a promise that the matter should be investigated, never got any satisfaction. I believe I wrote you at the time, stating the facts of the case, but have forgotten the date. I consider your expose of the powder and its manufacturer not only justifiable, but a great benefit to all sportsmen and others who have occasion to use explosives, as I believe that may one using it continually will sooner or later meet with an accident. Lulso think that these sentiments concerning the course of FOREST AND STREAM in the matter are the sentiments of sportsmen generally throughout the United States. An uncertain as to which of the numerous Dittmar powder companies manufactured the powder which caused the accident of which I speak.

#### FLORIDA SHOOTING.

FLORIDA SHOOTING.

PERNADINA, Fla., Sept. 27, 1880.

Editor Forest and Stream:

Thinking that I might interest you and your readers with a few items of sporting news from this location. I have concluded to address a few lines to you, heping at least to convey our most hearty assumances of esteem and good will.

Our gun club has not made much progress, I am sorry to state. We organized, elected officers and adopted constitution and by-laws, and purchased a Card's rotary trap, with a good supply of glass balls, but as yet no shoot has been had. However, among our number we boast of some very good shots, whose reputation extends over the State. Around Fernandina the sport is not as good as in other portions of the State. This may be explained by the fact that Fernandina is located upon an island, and there are so many portuniters and necroes with old muskets that the bries are kept pretty well killed off. Then, too, at the meeting of our last Legislature the game laws of this State were culticly abrogated, much to the disgust of all true sportsuen. The consequence is that all game has been sacrificed. The greatest will we apprehend is from the negroes, who trap the quality more than the series of the series of the explained to account in most murderous numbers. We hope to secure legislation upon this very important matter at the meeting of the next Legislature, which convenes in November next. The main object of our organizing a gun club here was to endeavor to have proper game laws enacted, and we intend to accounish it at all hazards.

We have very good snipe shooting from December to February near our city. Large numbers of the English snipcome upon our inhand marshes, and afford most excellent sport. By taking the Transit R. R., we can reach as fine quality such season, and an analyse of Fernandina. I went out last winter and secured some very fine bags. Each day not less than thirty, and often over fifty were killed over my Gordon setter Dandy, whose pedigree is well known in your State. I am a native of Flor

They will be kindly dealt with.

A FLORIDA CRUBE.—Pinellos, Fla.—If there be three or four of your readers, "jobly fellows," (carless as the ancient Kim himself, having good pieces, and being good shots, who for the sake of a little extra fun would come all the way to Florida and engage the services of myself and friend, Thomas B., we will agree, on slim salary, to furnish a nice yacht and sail down South among the solitudes of land and sea, where the liveliest sport will be in store, where we can fish and hunt to our heart's content. The finest fish, the noblest game, besides the beautiful birds of our tropies, and the rarest sea shells from our waters will be our allurements. Our programme will be to seour the coast, and if not satisfied, to quit our boat when we get away down and take an ox cart for the interior. We will find bears, panthers, wild cats, catamaturs, wild hong, deer, turkeys, ducks, etc., besides, we will find wild honey, if not locusts. Among the islands of Charlotte Harbor there is a species of panther called Mexican lion; we are particularly anxious to "thin out" these fellows! I will not go into details of this hunt, but will assure our friends that the Gull coast at the season chosen, from 14 of Nov. to 1st of Dee, will be delightful beyond the power of this pen to express. While it will be too warm for frost, it will have gone to rest, and the doer will be "seaf fat,' the sea shells and curiosities washed up by the late gale will be cured, and mullet will be full-rocel! Come, get ready. Write me for any further information or particulars. The review will cost \$150—this is hire of suitable boat, guites and provisions; four real "go casy" fellows to share expenses.

Yours for the trip.

That New Jersey Mexicology Law Balanchary, M. J.,

Yours for the trip.

W.M. P. NEILD.

THAT NEW JERSEY WOODCOCK LAW.—Bloomsbury, V. J., Sept. 28.—September has come and almost gone, and only one woodcock seen or shot in this vicinity. During June and July they were in sufficient numbers to insure sportsmen fine shooting, but in August not one could be seen. Not a gun has been fired on or near their harboring places this summer. Yet, when Sept. I came, not a bird could be found. We thought they were moutling and would be found during the latter part of the month, but recent efforts to find them have proved thus far unsuccessful. We do not give up yet, and think with October we will yet find them. Sportsmen in this neighborhood have obeyed the law, and the season has been very favorable toward this much-sought-for game bird. If we have not fall woodcock shooting now, when will we have it? Why do we not hear something from your Morristown correspondent, who advocated the law problibiting summer shooting? also from some of our south Jersey friends?—Have they found any birds is Sussex county or in the

southern pact of the State? I am against summer shooting if we can have it in the fall, but would rather have summer shooting than none at all. In regard to other game birds, I think we will find plenty of quail and grouse. The coveys seem numerous, and those I have seen will average about eighteen or twenty in cach. The past winter and spring, too, were here very favorable to these birds, and they hatched quite early. We have had fine sport during the past two weeks shooting plover. There were a great many large flocks on the grain fields, and we had fine sport for a few days. They are gone now, and we use our spare minutes in looking for the wary gray squirrel. He is about this season and just now in fine condition. Rabbits without end, and I will venture to assert there will be hundreds shot on the 1st of November within one mile of this town. We are only sixty swiles from New York with a train reaching here at 8:12 a. u. on N. J. Central R. R. Those who are fond of the music of hounds could have fine sport here. P. H.

en N. J. Central R. R. Those who are foul of the music of hounds could have fine sport here.

Deur Shooting Yrah: Sylacuse.—Syracuse, N. Y., Sppl. 19.—About us we have a very fair variety of shooting grounds, sespecially good grounds for woodcock and Wilson shipe, of which very many are about these days brought to bag. No very remarkable bags, but as large as any man chiming to be a sportsman ever ought to make. What I was about to speak of are two ponds near this city, to the sporting fraternity nearly unnoticed. Offisee Lake is fifteen miles dismit from this city and in this county—Onondaga. It is a beautiful little lake, seven miles long and about a mile or so in width. I wish to say to the bays who enjoy good shooting late in the fall for ducks, sinje, etc., that there is no place I know of better adapted for sport than this. As large a string of ducks can be made from this lake as from most any other lake I know of. This lake is easy of access, accommodations at the foot of the lake are good and cheap. The greatest expense will be a team from this city. Hotel fare, 81 per day.

The other point, I wish to mention is Big Sandy Creek Pond, on the bank of Lake Ontario, cicht miles west from Pierrepont Manor, on the line of the Rome and Watertown R. R. Fare from this lace to Pierrepont Munor, \$1.55; stage from there to the pond, \$1. A nice hotel has been built at the pond, and is kept by one George Wood, a good fellow, a live sportsman and excellent shut. He has pleasint and profitable. At this point there must be nearly a thousand acres of wild rice, of beautiful growth, affording most ample feed for ducks, and most magnificent cover for the sportsman. Late in October ducks congregate here to a very large extent, and the shooting is many times extraordinarily \$20.

Tknow of no better snipe ground than this anywhere in the State of New York. Woodcock can usually be taken hereabouts in the month of October, which would satisfy the most fastidious sportsman. Indeed, I consider this region of country as good as any in this State for late shooting. Particle shooting can hereabouts be found in great abundance, Visitors will find Mr. George Wood, the gentleman who keeps the hotel, most heartily rejoiced to have any and all of his guests have a good time and a good shoot. His charge will be \$1 per day for board; no charge for boats. Should they wish, he will go with them himself, or furnish a man fully competent at \$2 per day.

fully competent at \$2 per day.

Onto Quan. Smooths,—Cheedind, Ohio, Sept. 30.—I would say here the chances for quail in Northern Ohio are better than for several years past. Bevies I have moved seem to have large broads in numbers and are early and well grown. Can't shoot them till Nov. 15. Not much time left. Too dry for suipe here this full. Woodcock tolerably penty, more so than in July. Have shot nearly two hundred this season. Ruffed grouse are middling plenty for this section, not ever plenty. Am going next week for a hant to John Davidson's, Monroe, Mich. Their season commences then for all kind of game. Writes me game prospect is somewhat better than last season. I was up last season and had a nice time with John, as every one had who visits him; but game not plenty.

Texas.—Cuero, Sept. 25.—We have had a good number of plover here this season and fair bags have been made. The prospects of sulpe, duck and goose shooting are flattering, as the recent heavy rains have filled all ponds and lakes, which are dry during the summer, with water, which, together with the mash, afford fine feeding places for them. Have shot on the 13th inst. five teal, and several flocks have been seen passing over town. Sulpe and geese do not arrive here before the middle of October, but stay here all the winter if the season is favorable and water and food abound. Quall are not as numerous as they were in former years, but still good bags may be secured in some localities.

A. II.

bags may be secured in some localities. A. M. Loss Island Porester Club Incid their annual meeting for the election of olificers at Wm. Cleaver's Light House Shades, corner of Putnam avenue and Irving place, Brooklyn, N. Y., on Wednesday evening, Sept. 22. The following oilicers were elected for the ensiting year: Henry Thorpe, President; Class, W. Edwards, Vice-President; Robt, T. Sabin, Treasurer: Class, W. Field, Secretary, Mr. John Andrews was admitted to membership. Although the club is small, it does not lack interest in the objects for which sporting clubs should be organized (that is for the protection of fish and game), as is evidenced by their belonging to the State Sportsmen's Association and the Long Island Sportsmen's Association, They have just entered on their third year of existence. They confine their shooting excursions to the East End of Long Island, where good sport is always to be had.

is always to be had.

SOUTH CAUGLINA.—Charleston, Sept. 27.—The coming shooting season, I think, will fully demonstrate the beneficial effect of the game law. Up to within three years ago any urchin who fels so disposed might have shouldered his gun in the breeding season, and have gone forth bent on destruction; the death of every bird which he happened to shoot caused the death of two or three young ones. The consequence was that to get any birds at all it was necessary to go at least ten or twelve miles from the chy. But now it is altogether different. Birds are comparatively plentiful, and the conting season promises some rare sport.

Season promises some rare sport.

Saved His Dog.—Opelowers, La., Sept. 25.—Snipe were seen here last Saturday, 18th inst. Teal ducks were in market this week. A party of five killed sixty-three prairie chickens last week, hunting parts of two days. The prairie was very dry, and the birds scattered, generally only one in a place. Quali are numerous; but we cannot shoot them with any satisfaction here till the crops are gathered and stock turned into the fields to break down the cover. Our best months are December and January. I had a pointer bit

through the tongue last week by a very large water moccasin; I poured about a tundler of whisky into him immediately, which made him ''dead drunk," and in less than a week he was ready for service. J, W, J

Our Detroit Letter. Introit, Spi. 26.—I have just learned a fact of great practical interest to lumiters, and after FOREST ADS STREAM shall have made it known I expect to see a rush of Ninrois to Northern Mich, that will require a special train possibly once a day. The Detroit, Grand Haven & Milwaukee Railroad, in connection with the Grand Rapids & Milwaukee Railroad, in connection with the Grand Rapids and Indiana Railway, offers reduced rates as a special concession to hunting parties bound for the north woods of Michigan. The fare from Detroit to Petoskey and return in parties of five or nore is glt.30 acid, and in parties of twenty or more it is \$10.40 cach. There is a proportionate reduction to all intermediate stations. Return tickets on these terms are good till Dec. 31. Dogs and guns are taken in the baggage car without extra charge, and special care is bestowed on them. Northern Michigan, now that the sulry days have slunk defeated away, is the paradise of hunters, and these new railroad arrangements, it seems to me, are just the thing to populate that paradise during the smash-bang season.

Mr. J. W. Thompson, of Lonisville, Ky., writes from Point Mouillic (Ed. Gillman et al's famous shooting ranch) in these words: "I have killed about eighty duck, and they were about all I shot at—only made one shot that did not do execution."

(G.

execution."

(J. MILLIONS OF DUCKS.—Toleda, Ohio, Sept. 24.—There are lots of ducks in the marsh now. I went to our Middleboro Club on the steamer Chief Justice Waite and down the bay from Cedar Point to West Sister Isle. It was just one mass of ducks, millions of them, mostly teal, some mallard and ring-tail. The club at Cedar Point had a grand opening of the new house on last monday evening, built for the use of the club by Col. Offile Payne, of Cleveland, a gentleman of much wealth. It was a grand affair. Ladies and gentlemen, music and dancing, and after all a shoot by the club; and such a lot of ducks! The smallest number any one man secured was 44; the largest 109; others 60, 70, 55, etc.

I was fishing Monday, Tuesday and Wednesday at our club. The water was too warm yet; few fish. Caught several, and they were very line; weighed 4<sup>1</sup><sub>1</sub> and 5<sup>1</sup><sub>2</sub> bbs. We are all waiting now for cold weather, so our ducks will keep. No use shooting them unless they will keep to get home.

Stupper Lays —Chicago, bet 1.—Mr. A.P. Wilking land

seep. No use snooting their discussions of the Collection.

Strint Lake.—Chicago, Oct. 1.—Mr. A. P. Wilkins, land agent for the Chicago, Miwankee & St. Paul Railway, has been in town for the past week, making arrangements whereby sportsmen can make the trip to Spirit Lake, Iowa, at a small cost. The railroad company will furnish a hunters' car, with complete outift for living, and thousand mile tickets, for \$20 each man, and they can take a cook and porter free. The car will accommodate from fifteen to twenty persons comfortably. They propose making a feature of these cars, and will spare no pains to make every one as comfortable as if they were domiciled in a hotel. For those not desirous of accompanying so large a party they sell round trip tickets good for two weeks, for \$20, and at the lake there are hunters' lodges, where the sportsmen will be taken care of and all fixtures furnished at the nominal sum of \$1 per day. Game is reported very plenty there just now, including prairie chickens, ducks, geesse, brant, etc.; and on the lake the fisherman may take his choice from black and rock bass, perch, pickerl, pike and an occasional sturgeon. This has been truly named the sportsman's paradise. Persons desirous of more may take in scance from make and rock obass, perch, pick ered, jike and an occasional sturgeon. This has been trul named the sportsman's paradise. Persons desirous of mor minute information will have it cheerfully furnished them by addressing A. P. Wilkins, Whitewater, Wis., who has re-sided in this vicinity for the past eight years.

sided in this vicinity for the past eight years.

Audition Rod and Guy Cluu,—Brooklyn, Sept. 29.—Last week a meeting was held in the extreme eastern district of Brooklyn with the intention of forming a sportsmen's club to be composed of young men residing in the vicinity. They named the association the Andubon Gun and Rod Club. The officers elected were: Robert T. Sabin, President: Edward Blackwell, Vice-President: Frank Gerling, Treasurer, and James H. Henning, Secretary. The club already has a membership of fifteen, and bids fair in less than two months to double its present number. The objects of this association are to protect the game in their immediate neighborhood, especially between the Kings County line and Jamaica, and also to encourage skillful use in the rod and gun.

Many, Biddistant, Sept. 19.—A partity of surveyers of the first was such sections.

MAINE.—Biddeford. Sept. 13.—A party of seven good fellows started to-day for Eastis and Tim Pond for two weeks camp life. I guess Kin Smith will think he is taken when he sees these grans, ammunition and fly rods. Dr. Hill and Will Elden, the crack rifle shots, strike out for big game of bear and moose kinds, while A. Pierce, J. R. Tibby, Dr. Hussey, E. Pilshury, our eflecient postmaster, and D. Roberts content themselves with smaller game and skill in easting the fly. Success attend them all, for many are waiting for bear steak and trout.

MAINTAND.—The quait shooting in Queene Anne and Tal-bot counties, Maryland, promises to be unusually fine this season. There are few sections of the country where birds are more abundant, and in many places in each county the fields are large, and the sedge grass cover admits of the birds being shot early in the season in the open. One can hardly go wrong in making a selection of any of the little towns to put up at as headquarters. Besides quait, there are wood-cock when the season is wet, and along the bay shore many variety of ducks. variety of ducks.

EAGLE-LAKE, Me., Sept. 23.—Steele and I are now on our way down Eagle Lake. Weather cool; strong head wind. Have found plenty of fish and game of all kinds. There are twenty-three persons, to our knowledge, now encamped on this lake, and eight more on their way here. Since I last wrote a team has been put on Mud Pond earry, so that there is no lugging between Moosehead and this lake. We encamp on Churchill Lake to-night and expect to reach Munsungun lake by the middle of next week.

FLORIDA COMPANION WANTED.—Buglato, Sept. 27.—I anticipate spending the winter in Florida (on the St. Johns river a few miles from Enterprise) in fishing and hunting. Am desirous of having a companion. If you know of any one intending to do the same you will confer a favor by putting me in connection with him. I start about the fifteen of November 12. ting me in cor of November. L. B. C

A Homing Pigeon Shot. --Contreport, L. I. Oct. 1.—A colred man shot the other day, while after wild pigeons in this icinity, a homing pigeon marked under the wing.

J. T. Witson, New York City, No. 169.

New Yoek,—Hornellsville, Sept. 27.—Plenty of ruffed grouse and black and gray squirrels are being killed here now. On the 23d a huge flock of crows passed over this place. They were over three-fourths of an hour passing. There-must have been 20,000 in the flock. They did not fly like pigeons, but were from fifty to two hundred feet apart.

How does our correspondent know that there were 20,000 in the fleels 2

General,—Americus, Ort. 1.—Our game birds (Bob White) are abundant. I never saw more of them. Our climate is delightful in fall and whiter, and Americus furnishes board good and cheap, and if any of your Northern sportsmen who come South will make this a stepping point, we promise them as time shooting as the country can afford, and as hearty a welcome as Southern hospitality can give. I've been out to-day for the first time; two guns bagged fifty. Snor.

to-may for the uses time; two guins bagged mily. Shor. Fonest and Stream General Passenger Department, —Chicago, Il., Spt. 26, —The following persons have recently passed through Chicago et Northwestern Ry; Chus. Bullock, Tursert Ellis, W. S. Armard, Jas. H. Hall and E. S. Today, all of Massachusetts. They go to the Maple River

Midway Shooting Cleb.,—The Midway Shooting Association, of Matawan, N. J., was organized in 1875, and chartered in 1880: The club now owns a fine plot of ground, some fourteen acres, at the junction of the C. R. R. and P. & N. Y. R. When the contemplated improvements of this property are completed, the grounds will make one of the finest shooting parks in the East.

Chicago, Sept. 30. I have just returned with R. P. Flow-ers and party from N. Y. We had a splendid time and plenty of game. We were up at Grand Forks and Alsop, Dakota, and Adrian, Minnesota. Killed 55-chickens and ducks.

Wild Pigeons. — Tolland Co., Coan., Scyl. 29. — Pigeons are scattered over this county in great numbers feeding upon the white oak accers. Bags of 20 to 40 or more for a day's shooting of two guns are common. The pigeons have not been so plenty here for many years.

Sedalia, Mo., Sept. 25.—The Sedalia Shooting Club held their first prize shoot, Saturday, Sept. 18; 18 yards rise, Mole trap, 20 glass balls each:

Sneed	. 7	Parmeriee
Smith	25	Yold it
Babeock	. 9	Kumn
Highleyman	-	Trader. 16

Parmerlee was awarded the cup.

On the 25th the club had a competitive shoot, same conditions, resulting as follows:

rigneyman	15 Messerly
Yold	14 Trader
Barber	16 Montgomery
Parmerlee,	16 Sneed
The club is rapidly improving	and hope soon to be able to report

18 out of 20. OCCIDENT.

PORTLAND, Me., Sept. 30,-At the fournament of the Mains FORTAND, J.E., SOPA. 30.—At the fournament of the Maine Sportanna's Association, Pomeroy, of the Androscoggio Cith, Low-iston, won back the diamond badge, and, it being the third time, he has a right to hold it. The second prize, a double-barrelled breech-loading fowling piece, was won by Widfhrop S. Jones, of Peaks Island; third prize, \$22, C. I. York, Riverside Club, Brunswick; fourth prize, 250 pounds shot to H. C. Harmon, of Forest City Club, Portland; fifth prize, \$13.75, J. F. Randell, Peaks Island Club, Portland; sixth prize, half a case of powder, P. Jerris, Androscoggin Club of Lewiston; seventh prize, \$8.21, Brackett, Peaks Island Club, Portland. In the glass-ball sweepstakes, the first prize, \$9, was won by Benjamin J. Willard. of Peaks Island Club, Portland; second prize, \$5.80, to A. W. West, Forest City Club, Portland, and third prize, \$3.20, to P. Jerris, An droscoggin Club, Lewiston.

CHICAGO, Oct. 1 .- The second match between the Austin Gun Club of Austin, and the South End Shooting Club of Chicago, took place at Grand Crossing, Wednesday last. The conditions were: fourteen men on each side, wild birds, 25 yards rise, from plungo traps. A strong wind prevailed, which greatly assisted the birds in getting out of the way. The Austin Club killed eighty, the South Ends sixty-eight. This was the second match of the series, the first score being 109 to 107 in favor of the Austin Club,

BROOKFIELD, Mass., Oct. 1.—The Sportsman's Club have a union shoot next week at the Park, and have invited clubs from Spencer. North and West Brookfield, Ware and Palmer. Each town is to furnish a team of at least ten, who shoot team against team. All other members of the different clubs will also have a chance to shoot at the regular string of 20 balls. The shooting begins at 10 a. m., and, if a fine day, a large crowd is expected, and a good day's sport anticipated.

LEAYENWORTH, Kan., Sept. 29. -The Leavenworth Gun Club held its regular shoot yesterday afternoon on the reservation.

used an army musket. E. Haberlein and Scott Lee tied, and Haberlein won the second prize. Ed. Carney won the leather medal.

October 1.—The Leavenworth Gun Club had its shoot yeaterday on the fair grounds as advertised, each member shooting at ten stationary and ten rotary balls, thrown from two "Monarch" traps: E. Hobertein. 18. A. Wernher. 12. W. C. Bluman. 19. B. C. Hibman. 9. H. Lanitz. 11. Scott Lee. 19. D. B. Hibman. 18. C. has. Schnacker. 15. J. W. Sprately. 2. Ceo. Bernicer. 15. J. W. Sprately. 2. Ceo. Bernicer. 15. J. W. Sprately. 2. Ceo. Bernicer. 15.

Chas, Mager. ...
W. C. Himman won first prize (a Monarch trap, donated by Culver Bros, valued at \$15). E. Haberlein and D. B. Himman tied on Is halls: Himman won second prize in shooting off the tie, breaking 5 straight, and Haberlein 4. Chas. Schmelzer and Chas. Magoe tied, which was not settled. After the glass ball unath was over, some members of the cital bad a sweepstake pigeon shoot, in which J. W. Spratley won first money, and W. C. Himman second.

Some members of the dubt had a swelestaked speed shoot, it which J. W. Spratley won first money, and W. C. Himman second.

Sacramento, Cal. Sept. 24.—The shooting tournament, under the anspices of the Forester Chib of this city, which opened Tuesday, has passed off most pleasantly, and free from anything to merits complete success. Nearly every section of the State was ropresented. Entries were made of clubs at Colusa, Franklin, Roseville, Willows, Plymonth, Folson, San Josquin, San Francisco, Chico and other parts of Butte county, Cloverdale, Georgetown, Neweastle, Yeacaville, Pilot Hill, Napa, White Rock, Sheldon, and from other points, in addition to those from this place. Forty-five contestants took part in the shooting. The conditions were fifteen birds each at 21 yards rise, using three plunge traps of the H. & T. pattern. J. N. Burnett and Geo. Routier tied for first prize on 15 straight, and shot off tie at 6 double birds at 18 yds., Routier winning with clean score. Among seven ties on 14 P. D. Brown won the shoot off with a clean score of 6 double birds at 18 yds., the ties of four being shot off and the prizes awarded. Soot, Toda and Zares the content of the state of the state of the price of the state of the

Eastern Field Trials Club's Second Annual Trials, Robins Island Peconic Bay, L. I., Nov. 29. Jacob Pentz, Secretary, New York.

ST Louis Snow .- As we go to press the St. Louis Bench Show is in progress. A full report of the same, with list of entries and winners will appear in our next issue.

Names of Dogs.—Correspondents are requested to exerise care in writing names claimed and other kennel notes. Remember that it is very easy to misunderstand communications of this kind unless they are written plainly and explicitely. The editor would prefer rather to read a page of manuscript in order to understand exactly what the writer means to say, than to puzzle over a brief note in which the names of owner, sire, dam, former owner, etc., are bunched in a conglomerate and undecipherable mess.

Advertisers are respectfully requested to print names of

PENNSYLVANIA FIELD TRIALS.—We have received a neatly printed little book containing the Constitution, Laws and Rules of the Pensylvania State Field Trials Association. The rules of the club specify that :

runes of the club specify that:  $A \ dog \ to \ be eligible to \ run \ in the field trials of the association must have been owned in the State of Pennsylvania at least three mouths prior to the date of the commencement of the trials. A puppy whelped on or after April 15 of the previous year shall be eligible to run in the puppy stakes, and one whelped on or after October 15 shall be eligible for the nursery stakes.$ 

The rules for the field trials are made up with slight alteration from both the National American Kennel Club and Eastern Field Trials Club recently published in Forest and STREAM, and in consequence it is not necessary to reproduce them in full. The principal changes alluded to occur in Rule 5, and in the "instruction to judges," under the heading of alse Pointing, the paragraphs read as follows:

False Pointing, the paragraphs read as follows:
RTLE 5. Positive points for merit: Pointing, 35: pace,
15: backing, 7; style, 6: staunchness, 8: ranging, 5: quartering, 8: obedience and disposition, 6; retrieving, 10: total,
100. Negative points for denceri: False pointing, 1 to 5;
breaking in (cach offense), 5: breaking shot (cach offense), 8:
chasing or breaking shot and clusting (cach offense), 12.
(False pointing)—The judge shall give a dog ample opportunity to discover whether or not be is on a true point, and
the penalty shall range from 1 to 5 for his acts throughout the
heat.

heat

Mr. J. R. Stayton, Secretary, telegraphs us that the following gentlemen have consented to act as judges: Mr. B. F. Wilson, of Pittsburg, Pa.: Mr. J. M. Taylor, of Lexing. ton, Ky., and Mr. Washington A. Coster, of Flatbush, Long Island

Island.

A VALUABLE PRESENT.—Mr. T. T. Sawyer, Jr., of Boston, Mass., has just returned from England, bringing with him a young fox ferrier bitch, which was presented to him by Mr. Hugh Dalziel. She was bred by Mr. Arthur A. Easton, of Hufl, England, and is in every respect one of the finest of her breed in America. "Jumping Jenny," as she was named by Mr. Dalziel, has white body and head evenly marked with black and tun. She is by Champion Gaffer, 6942, E. K. S. B., out of Champion Gerty, 7,004, E. K. S. B. Her sire, Gaffer, has won thirty-two first prizes, and her maternal grandsire and grandsdam, Bulfett and Gaity, were sold at Darlington show for £350.

Westminster Kennel Club Importation.—Mr. R. B. Summerson is about sending over his pointer bitch Polly, by his Champion Stot, to the Westminster Kennel Club, Polly will have plenty of opportunities of showing her excellent working qualities this autumn, and in the spring she will be bred to Senseulon.

Rex.-Mr. Fisher Howe, Jr., writes us that his pointer Rex is doing fairly well. Within the last few days he has begun to rest a little on his foot, and has recovered heart enough to bark once or twice.

enough to bark once or twice.

ELOHO AND ROSE.—Dr. Wm. Jarvis, of Claremont, N. H., has forwarded to us a neat little pamphlet containing the pedigrees, public performances, etc., of his celebrated red Irish setter, Champion Eloho and Rose. The little book also contains a full history of this race of extraordinary setters, whose winnings have been so often recorded in these columns. We will take pleasure in giving all inquiring readers information concerning this famous strain.

-Mr. Hugh Dalziel has recently accepted the kennel editorship of the Fanciers' Chroniols.

-Mr. Jefferson Cooper, of Blauveltsville, N. Y., is at Milford, Neb., with three of Dr. S. Fleet Speir's dogs.

-Mr. Zachary Taylor, of Northumberland, Pu., is at Lincoln, Neb., with one dog.

#### THE ENGLISH SETTER

FROM VERO SHAW'S ILLUSTRATED BOOK OF THE DOG

[Reprinted from advance sheets forwarded to the Forest and Stream exclusively, by the author, through the couriesy of Messrs. Cassell, Petter, Galpin & Co., Publishers.]

WHATEVER the origin of the setter may have been, there can be no possibility of a doubt but that he holds a position second to none in the canine word in the present day. The beauty of the doe's coat and the brilliancy of his colors, coupled with his use and intelligence in the field, cannot fail to make the setter a favorite with all who really admire and love a good deg.

Another important feature in connection with the setter's popularity, and which has been no small support to it, is the amount of national jednowy and prejudice which has been from time to time imported into discussions on the breed, as, naturally concupt, each variety in existence linds keen supporters among its fellow countymen. To explain our meaning we must at once allude to the fact that in the present day setters are divided into three distinct varieties—viz., the English setter, the Irish setter and the Gordon setter. This latter breed is recognized as the Scottish national setter, its rish relative, be fully alluded to later on in this work. There was an old Weish breed, too, of black-and white setters which is almost extinct, though frequently paterically alluded to by veteran sportsman hading from the Principality in question.

In various localities throughout the country families or strains of setters from special lines adopted in breeding—doubless with the object of producing the dog best suited to the specialities and peculiarities of sitting which is the country ver which they were to ne worked—assumed peculiarities of sitting which is the country over which they were to the worked—assumed peculiarities of sitting which is the setters which they were to the worked—assumed peculiarities and setters which were to the special names, such as the konnels which be.

and became known by special names, such as the kennels which became known for breeding good ones. The Earl of Carlisle has a strain, specimens of which have occasionally been shown. occasionally been shown, and which display strong-ly-marked Spaniel characteristics, and from the tendency to curl in the coat, the top-knot more or less developed, and their general shape, suggest them having been crafted on the Water Spaniel. In the Marquis of Bute's kennels in the west of Scotland there was low, and probable west of Scotland there was long, and probably gill is, a strain of black settlers, and numerous feeineds of extent had strains specially their own and some distin-onishing feature. The Beltons, famous in the northern countries, are a superb race, and form the great base of the now Lamous Lamous Lawrenck Setter. amous Laverack Setter, on which again is founded the majority of the great kennels, so favor-ably known throughout

ably known throughout the country, and which has an inniense popular-ity with American sportsmen. Whether any of the modern and present-day breeders have resorted to a spaniel cross direct we are not in a position to state, but that such might be done with advantage in some instances we do not doubt.

vantage in some instances we do not doubt.

In spite, however, of the numerous families into which the setter is now divided, there can be no doubt that the origin of each was the spaniel, and it is a curious subject for contemplation that Spain (as will be seen in the chapter on pointers) should have the credit of supplying us with the three breeds of sporting dogs—spaniels, setters and pointers—upon which we English so greatly pride ourselves. The credit of improving these dogs is of course our own, but it is impossible to claim any one of them as indigenous to this country, closely identified with it as they are at the time of writing.

John Cains alludes to the setter in his work on "Eng-

weiting.

Dr. John Caius alludes to the setter in his work on "Englishe Dogges," under the title of Index, and his classification of it with the spaniel is convincible proof of its identity with that animal at the period in which Dr. Caius wrote as follows:

"Another sort of Degges be there, seruiceable for fowling, making no noise elther with foote or with tounge, whiles they follow the game. These attend diligently vpon theyr Master, and frame their conditions to such beckes, motions and gestures, as it shall please him to exhibite and make, either going forward, drawing backward, inclining to the right hand, or yealding toward the left, (In making mencion of fowles my meaning is of the Partirige and the Qualle) when he hath founde the byrde, he keepeth sure and fast silence, he stayeth his steppes and will proceed no further and with a close, concert, watching eye, layeth his helly to the grounde and so creepeth forward like a worme. When he approacheth neers to the place where the byrde is, he layes him downe, and with a marke of his pawes, betrayeth the place of the byrdes last abode, whereby it is supposed that this kinde of dogge is called Tader, Setter, being in decde a name most consonant and agreeable to his quality. The place being knowne by the meanes of the dogge, the fowler immediately opened and spreededth his net, intending to take them, which being done the dogge at she necessioned becker or vsual signe of his Master ryseth vp by and by, and draweth neerer to the fowle that by his presence they night be the authors of their owne insmaring, and be ready intangled in the prepared net."

The above extract, though not throwing much light upon the appearance of the breed in the reign of Queen Elizabeth, nevertheless is a proof of its existence; but the following remarks taken from Gervase Markham's "Hunger's Prevention, or the Art of Fowling," which was published in London in 1655, gives a considerable amount of information upon the dog's character and the uses to which it was then placed. Under the heading of "What a Setting Dog is" Gervase Markham writes:

the heading of "What a Setting Dog is" Gervase Markham writes:

"Before I wade further into this discourse I show you what a setting dogge is. Cortaine fusly hard spaniell taught by nature to hunt the partridges before, and more then any other classe whatsoever, and that with all eagernesse and herenesse, running the fields over and over so hastily and busily as if there were no limit in his desire and turie; yet so qualified and tempered with art and obedience, that when he is in the greatest and eagerest pursue, and seemes to be most wide and frantike, that yet even then, one hern or sound of his master's face, taking all his directions from it whether to proceede, stand with a doubt him, and looke in his muster's face, taking all his directions from it whether to proceede, stand with, or retire. Nay, when he is come even to the very place where his prey is and dath as it were his nose over it, so that it seemes her may take it up at his owne pleasure, yet is his remperance and obedience so made and trained by are that presently even on a suiden he either sands still or falles down thate upon his belly, without daring once to open his mouth, or make any noyse or motion at all, till that his master cone unto hin and then proceededs in all things according to his directions and commandments."

then proceedes in all things according to his directions and commandments."

This quotation might almost have been taken from a mode-ern work on setters, as it refers to nelss of dog whose duties in the field appear to have little altered during the progress of time. There still seems to have been a considerable looseness in the classification of this breed of dog, and the barrier be-

Sportsman," in which a good deal is said about the setting dog, and sporting in general. The "Compleat Sportsman," which was published in the Sixoy, London, was dedicated to Sir Charles Keymis, of Keven-Mabbey, in the County of Ghamorgan, Bart., and may be taken as having been a valuable handbook relating to the laws on sport and dogs at the time when it was written. Mr. Giles Jacobs, however, copies unbushingly from Nicholas Cox, without giving the latter any credit for what he has taken from his works, and the result is that the description of the setting dog which we have quoted above is reproduced in the "Compleat Sportsman." It is, therefore, only reasonable to infer that no change, or, at all events, any material change, had come over the dog during the interest which has Cox wrote, or it would probably have been alluded to by Giles Jacobs in his work.

work.

If may be here mentioned in justice to the individual to whom the credit is due, that Robert Dudley, Duke of North-umberland, is supposed to have been the first person to train setting dogs in the manner which has since his time been universally adopted by his successors. His Grace lived about the year 1550, rather earlier than the date at which Dr. Caius wrote, but beyond casual references to him by subsequent writers, nothing is positively known of the system upon which he acted, though from the remarks made it is probable that his ideas were closely carried out by the setter breakers who came after him.

he acted, though from the remarks made a is possible when classified were closely carried out by the setter breakers who came after him.

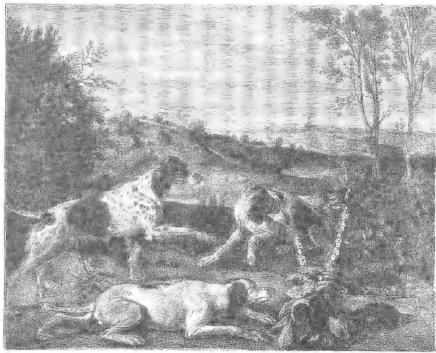

The "Sportsman's Cabinet," in 1803, devotes a good deal of its space to the subject of setters, which had evidently by that time taken their rank as a distinct breed of sporting dog. Whether, however, the author is quite correct or not in his assertion that "The dog passing under time demoniantion [setter] is a species of pointer originally produced by a commixture between the Spanish pointer and the larger breed of English spaniel," will always be a matter of discussion between persons interested in the breed, as many are to be found who dray the existence of the pointer cross. This subject may, however, be abandomed for the present, as our desired is now to trace the existence of the English setter from its first appearance and value as a sporting dog. Mr. W. Taplin, in

temporary arrans concerning its appearance
and value as a sporting
dog. Mr. W. Taplin, in
the "Sportsman's Cabinet," proceeds to remark
subsequently to the preceding quotation, that.
"The sporting deportment of a setter in the
field precisely corresponds with the pursuits
and propensities of the
pointer, but with this
single variation, that admitting their olfactory
sensations to be equally
exquisite, and that one
can discover and as expeditionsly receive and
edge the particles of
scent or, in other words,
the efficient of the game
as readily and at equal
distance with the other,
the difference of the
sports in which they are
individually employed
readers it necessary that
one should effect upon
this legs what the other
does by prostration upon
the ground, in the very
position from which the
present apprehention of the
secting dog' is derived.
And these are nivther
more nor less than the
pure effect of sporting
of the agents.

pure effect of sporting education; for as in the game is constantly expected to rise, so in the use of a setting dog and net the game is required to lie. A through the setting dog is in general used merely for the purpose of taking partridges with the draw-net, yet they are sometimes brought into occasional use with the gam, and are equally applicable to that appropriation, except in turnips. French wheat, standing clover, ling, furze, or other covert, where their sudden drop and point may not be so readily observed."

French Wheat, standing clover, ling, furze, or other covert, where their sudden drop and point may not be so readily observed."

Personally we attach very great importance to the above extract, for two teasons: First, it is distinctly stated that upto that time Pointers were the fashionable, or rather the favorite, breed with sportsmen who amused themselves by shooting three-quarters of a century back; and, secondly, it gives us a good reason for the change which has come over the setter's behavior in the field of later years. It is, of course, perfectly well known that the modern setter usually points his game standing up, as a pointer does, and the abundonment of netting is unquestionably responsible for this alteration in the method of a Setter carrying out his work. Before, when the sportsman was anxious to net as many birds as possible, it was most essential that they should be as undistructed as possible, and the presence of a dog would, of course, increase the chances of their being frightened away before the met was fixed for their capture. The chances of the dog being seen by the game was naturally lessened when he lay down, and this, no dould, was the reason for him being broke to do so. Now things are much altered, and the sportsman only wants the whereabouts of the game ro he indicated, so do so. Now things are much altered, and the sportsman only wants the whereabouts of the grane ro he indicated, so do so. Now things are much altered, and the sportsman only wants the whereabouts of the grane ro he indicated, so do so. Now things are much altered, and the sportsman only wants the whereabouts of the grane ro he indicated, so do so. Now things are much altered, and the sportsman only wants the whereabouts of the grane ro he indicated, so do so. Now things are much altered, and the sportsman only wants the whereabouts of the grane ro he indicated, so do so. Now things are much altered, and the sportsman only wants the whereabouts of the present day, which is unquestionably accounted for by the former

DOGS AND PARTRIDGES (After Desportes)

tween the setter and the spanied appears to have been unromoved at a much later time, and the name setter applied only to dogs broken to set game, and not to those distinguishable by any structural difference in shape or build. In 1687 Nicholas Cox writes of the setter in "The Gentleman's Recreation" in the following words:

"The dog which you elect for setting must have a perfect and good scent, and be naturally addicted to the hunting of feathers; and this dog may be either land spaniel, water spaniel, or nungrel of them both; either the shallow-flewed hound, tumbler, lurcher, or small bastard mastiff. But there is none hetter than the land spaniel, being of a good and nimble size, rather small than gross, and of a courazeous metal; which they you cannot dissern, being young yet, you may very welly show from a right breed, which have been known to be strong, lusty and nimble rangers, of active feet, wanton tails, and busie nostrils, whose tail was without weariness, their scarch without changeablenesse, and whom no delight did transport beyond fear or obedience."

With reference to the behavior of this dog in the field, Nicholas Cox remarks as follows in his notes on training the setting dog:

"You must teach him to come creeping to you with his

With reference to the centworr of this angle in the actual Nicholas Cox remarks as follows in his notes on training the setting dog:

"You must teach him to come creeping to you with his belly and head close upon the ground, as far or as little away as you think fit.

"A And this observe in his creeping to you, if he offer to raise his body or head you must not only thrust the rising part down, but threaten him with your angry voice, which if he seem to slight, then add a sharp jerk or two with a whipcord lash.

"You make a will be seem to slight, then add a sharp jerk or two with a whipcord lash.

"You was known as the same to stight, then sade as stating and with him, and he take a fancy to range, even when he is most busic speak to him, and in the height of his pastime make him fall upon his belly and lie close, and after that make him come creeping to you."

Thus Nicholas Cox succeeds in clearly proving that late in the seventeenth century the spaniel, or even a mongrel partialing of any breed, was used as a setting dog by Pritish sportsmen. Things do not appear to have undergone any great alteration in the beginning of the next century, for in 1718 one Giles Jacobs produced a book called the "Compleat"

sion of a constitutional timidity, which induces him to dread the severity of correction, and, of course, to avoid the means of disgrace; fraught with this irritability, their treatment in the field becomes matter of judicious discrimination. Dogs of this description, perpetually alive to the fear of giving offence and incurring bodily punishment, lay claim to very little ten-der attention as well at home as in the field. Warm, hasty, impetuous sportsmen contribute not unfrequently to their own mortification and disappointment, for many dogs of this description corrected in passion or beat with severity are so completely overwhelmed with distress or bumblated with fear that they almost insensibly sink at the feet, and can be prevailed on to hunt no more, or, what is sometimes the case, slink away home without the least chance whatever of being again induced to render further assistance in the sport of the again induced to render further assistance in the sport of the

again induced to render further assistance in the sport of the day."

It is an undoubted fact that in the present day many setters that would otherwise have been invaluable in the field are rained in their breaking and subsequent education by the severe treatment they receive at the hands of those in whose power they are placed. We are decidedly of the opinion that were less stringent punishment inflired for trilling offenses upon the members of more than one well-known kennel, an even increased reputation would quickly be added to that which it already possesses.

Three years later than the date in which the "Sportsman's Cabinet" was published—viz.. in 1806—there was a sale of settres, the record of which has been handed down to the present day. The prices realized were for the period decidedly good, and as the kennel was the property of a rather famous individual in his way—Daniel Lambert, the historical fat man, who shortly before his death scaled fifty-two stone eleven pounds—and the list, morrover, is valuable as an index to the prices of sporting dors seventy years ago, we produce it at length:

Peg, a blac	k setter	h			h												
Punch, a S	etter Do	4														26	* *
Brush																17	* *
B (b)	* *															20	
Bell																32	
Bounce	**															22	* *
Sam																26	
Charlotte,	a Pointe	١.	ľ	1	h	ŀ	1									22	4.4
Lucy	**															12	+4

This gives an average which would make dog-breeding a successful commercial enterprise even in the present day; but it is a noticeable fact that the setters fetched better prices than the pointers, which must be taken as a proof that the breed was coming up to a higher position in public estimation, or possibly Mr. Lambert's kennel was stronger in Setters than in pointers.

breed was coming up to a higher position in public estimation, or possibly Mr. Lambert's kennel was stronger in Setters than in pointers.

The date of introduction of the setting dog or spaniel into this country is not clear. There is no special reference to him in the old forest have of Counte, 'which guarded against the keeping of greybounds except under the stringent conditions of maining the animals or keeping them at a distance of ten miles from a royal forest: and even mastiffs kept by farmers and others for the protection of their dwellings had to lose three claws, which was called "expeditating."

Spaniels are, however, specially mentioned in a statute anterior to the time of Caius, and the dogs then regarded by the law were mastiffs, hounds, spaniels and tumblers. And in a statute of James L it is provided that no person shall be deemed qualified to keep setting dogs who is not possessed of an inheritance to the value of £10 per annum, a lense of life for £30 per annum, or who is worth £200 per annum, unless he is the son of a baron or knight or heir-apparent to an equire.

he is the son of a baron or knight or heir-apparent to an esquire.

The changed character of the sport of fowling when netting gradually gave way before the increasing use of guns, until it finally became entirely superseded, did, no doubt, act power-fully in modifying the setter, and the plastic nature of the dog has ever since been taken advantage of to alter and improve him to suit the constant changes in the conditions of sport.

As a factor in the conversion of the ancient spaniel into the

dog has ever since been taken advantage of to alter and inprove him to suit the constant changes in the conditions of
sport.

As a factor in the conversion of the nucient spaniel into the
modern setter. Blaine throws out the suggestion that a cross
with one of the ceteres or swift-footed dogs was resorted to,
and that the pointer is probably a cross between the spaniel
and one or other of the pagners. To produce the setter by
such a cross, we had in this country the greehound and the
swift light hound, at one time peculiar to Yorkshire, Cumberland, Northumberland and probably other northern counties.
There were other varieties of the ceters, no doubt, but the two
mentioned would in our view be the most likely to approve
themselves to practical sportsmen. In the absence of proof
of such a cross having been resorted to with a special purpose,
we content ourselves with pointing out the great reasonableness of Blaine's theory. Granted that the cross was adopted,
it is not to be supposed that it was adhered to, but the produce would be bred to the parent strain, the characteristies
of which it was purposed should preponderate, and that would
be, in this instance, the spaniel.

It may be argued that the cross with the light hound equally
with that by the greybound would quite after the style of
bunding, destroy the natural tendency to index or set the
game, and the latter cross, to a great extent, deprive the offactory powers. We do not think such a result would follow,
for even if in the first cross those were apparently developed,
they would be unequally so in several members of the litter,
and good judgment in selecting the blitches kept for brood
purposes, and wise mating with spaniel dogs excelling in qualties partially lost by the cross, would soon restore these in all
former fullness of development, while the desired modification
of form and other characteristics was sufficiently preserved.

If the theory of the cross with either of those mentioned,
or some other of the edere available (but none of

the spaniel family, the spaniel family. It is not impossible in the production of the modern setter that he arose from the roughest of spaniels described by our earliest writers by means of selection alone. None of our domestic animals are so easily changed, and, as it were, moded to the breeder's will, as the dog, and, in the case under consideration, the time has been more than ample

case under consideration, the time has been more than ample to effect the change.

It is very improbable that we have a better setter judge than Mr. William Lort, of Fron Gooh Hall, Montgomeryshire, and his experience of the breed is practically unlimited. We are, therefore, glad to be able to lay before our readers Mr. Lort's views upon the probability, and also of the desirability, of the pointer cross, which so many believe to be

largely present in most strains of setters. Mr. Lort writes

largely present in most strains of setters. Mr. Lort writes thins:

"As to the origin of the setter I am not so sure of the correctness of my old and valued friend, Mr. H. Herbert, when he says: There is no doubt whatever that the true setter is a pure strain of unnived spaniel blood, the only improvement produced in the breed arising from its judicious cultivation, etc. I am quite sure that years ago, say from forty to fifty, it was no uncommon thing to get a dip of pointer blood into the best kennels of setters. Sometimes it answered well, and though for a generation or two it diminished the cost, not always though at the cost of appearance, it fined and strengthened the stern, giving life and motion to it, and what, whether rightly or wrongly, in olden times was thought a good deal of—it rounded the foot.

"I know how shocked some of our modern breeders will be at the idea of their favorites having in their veins a drop of pointer blood. It is well perhaps that it is not generally known how many fashionable strains have been vitiated with much more objectionable blood than that of the pointer. I have seen droppers [cross between a pointer and setter]—yes, and dops bred from droppers—possessing exquisite powers of seent, lovely tempers and great pace. I think there is reason to believe the spaniel to be the foundation of our present setter.

"As a case showing that it is possible for cross-bred dogs

seem, booky tempers and great piece. Think here is reason to believe the spaniel to be the foundation of our present setter.

"As a case showing that it is possible for cross-bred dogs to breed true, I knew of a black setter bitch three crosses from pointer, belonging to Robert Warner, of Leicester Abbey. She was good herself, having all the qualities of a pure setter, and, curlous croueds, she bred well from either a setter or pointer. Mr. Warner gave his keeper (who afterward came into my service) a brace of black puppies, by a pointer, of this blich. They looked all over pointers, they worked like pointers, fery were excellent pointers, and were sold, when broken, at forty guineas—a good price in those days. I myself had setter from her, and they were good setters, and showed all setter characteristics."

A strong confirmation of Mr. Lort's theory is to be found in the subjoined engraving from a painting by the famous French arist, Alexander Francois Desportes. This great animal painter—born in 1061 and died in 1743—was elected a member of the French Royal Academy of Painting in 1699, and of its Council in 1714. For many years he occupied the Court position of historiographer of the chase, created expressly for him by Louis XIV.; and his pictures, which are very numerous, can hardly be surpassed for their fidelity to nature. The engraving we reproduce from his pencil is entitled. "Dogs and Partridges," and is valuable as distinctly showing that the pointer had been crossed with the spaniel before and during his time, and that the result was a dog very like our modern setter.

It has been before shown that up to the end of the last century pointers were the more favored breed of dog by sportsmen, but of late years the setter has made great prog-

like our modern setter.

It has been before shown that up to the end of the last century pointers were the more favored breed of dog by sportsmen, but of late years the setter has made great progress in public popularity. This may be, to a certain extent, accounted for by the existence of the three varieties—English, Seotch and Irish—to which allusion has been already made; but we feel linelined to believe that the natural toughmess of this dog's constitution has more to do with the change that has taken place. The thickly-padded feet of the setter unquestionably renders him a preferable dog for all sorts of rough shooting, and on the moors he is far better able to withstand the broken ground and the hard work that has to be encountered than the pointer, who is more easily fatigued. On the other hand, exception has been taken to the sorter that, though physically stronger than the pointer, he is not able to work so long without water, and it may be mentioned that this theory was in existence at the time Taplin wrote, for he remarks, with reference to his, his favorite breed:

"There is an erroneous opinion in circulation that it is a disadvantage to secties, they cannot continue to hunt long without water; though it is perfectly well known to the most experienced sportsmen they can endure heat, thirst, and fatigue as well, if not better han, pointers; they are certainly more difficult to break, and when broke are most apt to run wild and unsteady if not frequently hunted."

Kearly twenty years later John Scott writes in the "Sportsman's Hegository;"

"Many sportsmen prefer the setter to the pointer for pheasant shooting, as more active and hardy, having so much of

man's Repository?"

"Many sportsumen prefer the setter to the pointer for pheasant shooting, as more active and hardy, having so much of the quality of the spaniel, and thence not flinching at the thickest coverts. On the moors, and for grouse shooting also, the preference of the setter is decisive, for although he is said to require much water, and to be unable to endure heat and thirst like the pointer, the former, from his constitutional activity and the hardness of his feet, is superior in a long day over a rough and uneven surface. From accident, or from that never-failing desire of shining by the intermixture of breeds, with little consideration of the end, pointers have been crossed with setters, and setters with pointers, but we have not seen any beneficial result. On the score of utility, the setter can derive no improvement from such a cross; and granting—which, however, is not proved—that the pointer gains something in regard of usefulness, such advantage will be countervalled by an abatement of size, figure and stafeliness, on which account only, perhaps, he superseded the setter in the affections of the sportsman. \* \* \* "It has been disputed very uselessly whether the setter orther pointer have the most powerful nose; but let a sportsman take a thorough good dog of either kind into the field and he will no longer trouble himself with that dispute. Beyond a doubt the setter is the most useful gun dog of the two, but the pointer is the largest, most stately and showy, and is admired for his rate, his high raneing and steadiness. The setter on his part may put in his chain, and more especially when of the pure breed, to his full share of the intelligence, sagacity and affection for man, which shines so entinealty and so delightfully in the spaniel."

Such remarks as above would seem to betoken a very rapid advance on the part of the setter in the estimation of sportsmen who used the gun, for it must be borne in mind that not "Many sportsmen prefer the setter to the pointer for pher

Such remarks as above would seem to betoken a very rapid advance on the part of the setter in the estimation of sportsmen who used the gun, for it must be borne in mind that not twenty years before it would seem that this dog was only being gradually introduced into this branch of sport, having more generally been used in netting operations up to the commencement of this century. At the period of writing (1889) the setter is certainly the more successful dog in the field, as his many triumplus in field trial competitions must amply prove. With reference to these trials it may be briefly mentioned that they were instituted by the Kennel Club, which is a society originated about the year 1880 for the purpose of promoting the general improvement of dogs, dog shows, and dog trials. These latter are unquestionably decided proofs of a dog's capacity for work, and may be regarded as most successful institutions, having been largely patronized by the higher class of sportsmen who have shown great interest in the trials, and who have in addition entered their dogs largely for competition.

Who Has This Dog ?-On Sept 16 a black and fan Gordon sette bitch, 3 years old, was lost by the man who was exercising her on Boston Common. She was of medium size, with a white pile rm ing up to threat, rather slightly built, with tine, silky, straight coat; the tan behind running into the long hair of her flag. Rather a long nose, eyes dark hazel, showing the haws somewhat and rather slanting, giving her what might be called a pathetic expression when she looks at one. She is of a very gentle disposition, answers to the name of Beauty, and is broken. When lost she had on a black leather collar, made round like a trace, with a heav-silver-plated buckle, and a plate with name, address and license number on it. About three months ago the hair at the tip of her tail number on it. Amout three months ago the haz at the tip of her tail had been trianed down with sissors. Any information which could lead to her recovery would be most thankfully received by the undersigned, who would pay a fair reward for her without questions if who is in the hands of dealers.

The captain will make his selection from the above of ten men ind two reserves, and announce the same in time for the men to be an hand.

Savages as Riflemen,—She following account of the use of the preech-loading Martini rifle by the Zulusis taken from the narrative of Archibald Forbes, who, when under interview, speaking of his experience as an army correspondent, said: "In some instances I hought that taking advanced positions to observe battles had proved advantageous to my safety. It is a common fault with soldiers o fire too high. This is especially true of the troops of savage races, and in tighting such foes the advanced soldiers frequently hear whole olleys of balls passing harmlessly overhead. The poor Zulus at the colleys of balls passing harmiessly overhead. The poor Zulus at the discisive battle of Ulundi made the mistake of tiring too high with terrible results to themselves. They thought the adjustable sight-pieces on the guns regulated their power, and they set them with lumps of clay to the longest range. To the number of 20,000 they had surrounded the British who, only 4,000 strong, were formed in a hollow square. From all sides at once the savages made the attack, advancing to close range with their long range guns, and not only did the English absolutely mow the brave fellows down, but their own bullets were assisting in the deadly work by shooting over the British lines, and into the enemy at the other side."

#### SCHUETZEN NOTES.

The Father of the Schultzen is the United States.—Captain I. D. Busch, the founder of the New York Schulezen Corps, and the sinner of the Forest and Stream badge at the recent fall meeting of the corps, has just started for California for a three months! trip feeleft his hotel at Hoboken, N. J., at 7 o'clock on Sahurday last, ecompanied by a number of friends in carriages, and, driving to fersey City, book the 830 p. M. train for the West, On reaching he Fennsylvania depot a number of friends from New York were ound waiting to bid their friend good-bye. We wish Capt. Busch pleasant journey.

Schuetzen Park -Newark, N. J., Sept. 30. The Newark Schuetzen Society held its 28th King shooting to-day. As the weather was very favorable, a great many shootest took part in the sport. At 200 yards' distance, out of a possible 75, in three shots, he following were the best :

	H. Koegel51
	R. Brientuall
	A. Seitz 48
	J. Klenert
	W. H. F. Ffedler
	D. Terrili : i
	G. Hartmann
F. Hill	

Chs. Koegel was declared King, and received a splendid gold medal valued at 850. The others received money and other value-In the evening a summer-night's festival took place,

### Archern.

THE GRAND NATIONAL MEETING OF THE ARCHERS OF GREAT BRITAIN.

HE thirty-seventh annual tournament of the archers of Great Britain was held at the city of Shrewsbury, the ancient cap-lad of Salopia, on the 28th, 29th and 30th days of July last, two weeks later than the American meeting at Buffalo; and while the Salopians were not favored with such an exhibition of shooting as they witnessed in the year 1854—a score of 234 hits, 1,074 points, by Ford—yet some very fine performances were recorded, and, upon oy Ford—yet some very mo perominances were recorded, and, upon the whole, a good average was maintained. The features of the meeting calling for especial notice were the splendid Double York Round of 195 lifts, 897 points, by Mr. H. H. Palairet, who won thereby the champion medal and the first cash prize; the two cores of 49—196 and 41—205, secured at 89 yards by that gentlescores of 19—196 and 41—205, secured at 89 yards by that gentle-nan, yielding the highest total ever obtained at the 89 yards at a subble meeting by any archer except Mr. Ford. Indeed, con-idering the fact that the weather was such that great trichers like the Rev. W. Rimingrom, who last year, at the great Crystal Palace meeting, second 965 points, and at the frand Western meeting, 290 points, here only obtained 632 points, and only a total of 192 at 80 yards; that Mr. Walters, he last year's champion, only obtained as secore of 195 at the Double Gound, and a total of 170 points at the 80 yards; range; —this score of \$1,000 at this range by Mr. Palaire, second in two deats of views. of 81-401 at this range by Mr. Palairet, scored in two days of rain and wind, over a turf saturated with water, is a performance which eads us to name him the greatest living archer.

Another noticeable feat was that of Mr. C. H. Everett, who ob-

ained a shilling from each of the fifty-eight gentlemen shooting, or three golds made at an end on the second day at 60 yards. The nost notable thing, however, from a toxophilite point of view, was he wonderful shooting of Mrs. W. Butt on the handicap day. For en years this lady has been considered the best lady archer which he world has ever known, but it remained for this meeting to bear ecord of a feat unequaled in the annals of great public meetings. record of a feat unequaled in the annals of great public meetings. The English National Round consists of 48 arrows at 60 yards and 24 arrows at 50 yards, and this single round was shot on the handicap day. At the 60 yards range Mrs. Butt scored 47 hits and 259 points, and at 50 yards 21 hits, 132 points—a total of 71 hits, 421 score. When the surroundings of a great public meeting are considered, the 60 yards' shooting becomes almost miraculous. But twice in the history of archery has this score ever been exceeded by a gentleman—once by Mr. Ford with 46 hits, 292, and once with 18 bits, 290 by the same gentleman. For thirty-seven years archer;

of renown like Bramhall, Fisher, Palairet and Rimington-archers who have scored in private practice from 1,000 to 1,350 points at the Double York Round, have been shooting at these meetings, and yet the nearest approach to this superb score was Mr. Rimington's record of 48—285, secured at the National Meeting of 1878. The details of this 60 yards' score are as follows :

	Hits.	Score.
First dozen	12	7()
Second dozen	12	7.4
Third dozen	11	53
Fourth dozen	12	9.5
Total	47	259

Her last twelve arrows scoring five golds, six reds and one blue, We wish every lady archer in America would study this score, and become fired with the determination to enulate it.

It is a truth which few ladies in this country seem to understand that at ranges of 60 yards and under the ladies have a vast advantage over gentlemen, and with the same careful study and practice should greatly excel their more powerful husbands and brothers. The bows used by the gentlemen are too powerful for the best 60 yards' work. The aim comes so much below the target that the greatest accuracy is not attainable, while with the bows of 28 to 32 pounds used by the ladies, the aim comes usually about the gold at 60 yards. It is, of course, well known that in delicacy of touch and manipulation, the ladies are far superior to gentlemen, and there cannot be a question but that they should be victorious over their have the ladies approached the gentlemen already in Great Britain the records of this national meeting bear witness in the fact that taking the thirty highest scores made by the ladies with 48 arrow, at 60 yards, and compare their with the thirty highest scores se cured by the gentlemen at the same range, and we find the gentle-men scarcely two points ahead, the ladies averaging 164 monts, to 185 by the gentlemen. This should be an incentive to our lathest to adopt a correct system of siming, and diligently strive to attain that high degree of skill now possessed by their fair consins beyond the sea. Our gentlemen are pushing up toward the best of ringilish secring-will our ladies permit themselves to be successful!

below we give the scores of all the ladies and gentlemen in the below we give the scores of all the laddes and gentlemen in the contest for the medals in their order of excellence, observing only that Mrs. Horniblow, though obtaining only second gross-score, secured the national medal by a majority of points, gaining two points for gross hits, one point for hits at 60 yards, and one for score at 60 yards; while Mrs. Legh obtained two points for gross-score at the Double Round, and one point for score at 50 yards; score at the Double found, and one point for score at 30 yards: Mrs. Butt gaining one point for hits at 50 yards. Mr. Palainet gained all the points for the gentlemen's medal, except one point, which went to Mr. Rinnington for score at 60 yards. It should also be noted as a matter of exceeding interest in archery that Mrs. Horniblow, who now holds the Lady Championship Badge, haven the prond distinction on eleven different occasions. Since the ferranton of the National Archery Society, she has scenred in emblan of algorithms for the proposal of the National Archery Society, she has secured in emblan of algorithms for the National Archery society, she has secured in emblan of algorithms for the National Archery society, she has secured in emblan of algorithms for the National Archery society, she has secured in emblanded to the National Archery Society, she has secured in emblanded and the National Archery society, she has secured in emblanced and the National Archery society, she has secured in emblanced and the National Archery society, she has secured in emblanced and the National Archery society, she has secured in emblanced and the National Archery society, she has secured in emblanced and the National Archery society, she has secured in emblanced and the National Archery society, she has secured in the National Archery society, she has secured in the National Archery society, she has secured in the National Archery society, she has secured in the National Archery society, she has secured in the National Archery society, she has secured in the National Archery society, she has secured in the National Archery society and the National Archery society and the National Archery society and the National Archery society and the National Archery society and the National Archery society and the National Archery society and the National Archery society and the National Archery society and the National Archery society and the National Archery society and the National Archery society and the National Archery society an

blem of championship in these years and with the scores here given 1853, 88-305; 1856, 109-487; 1858, 101-457; 1862, 428-569; 1963, 116—478; 1869, 123—629; 1870, 134—700; 1871, 138—746; 1872, 136—660; 1873, 142—764; 1880, 133—593; her score of 142 hits and 764 value, by which she gained the champion-hip in 1873, being the highest which has ever won that emblem.

The following are the scores for the medal contests for 1880: GENTLEMEN.

consequence of the crowded state of our columns, a large of important matches have been omitted during the past month

ENGLAND vs. AUSTRALIA

(From the London Field )

After a most brilliant career in the provinces, the Australian eleven of 1880 at last encountered a representative team of England on Monday, Sept. 6, at Kennington Oval. Since their arrival in England at the beginning of the cricket season, now rapidly ap-proaching its close, the Colonials have played over thirty matches in various parts of the kingdom, generally against teams of eighteen, and only twice have they suffered defeat. Early in their career over here they expressed a desire to try their strength against Eng-land, but for reasons which we hope will now be forgotten, and which we do not desire to enter into, their propositions were treated coldly. After they had met with such surprising success—including a most praiseworthy, if fortunate, victory against Gloucester-

shire-English cricketers began to feel that some reproach would rest on them if they permitted formen worthy of their steel to re-turn without having waged friendly war with the old country. thanks in the first place to the thoroughly sportsmanilie conduct. Thanks in the first place to the thoroughly sportsmanilie conduct of the Sussex County Club, who gave up the days arranged for their match with the Australians; secondly, to the energy of the Surrey Club, who in a short time made all the necessary arrangements; and, thirdly, to the magnanimity of Lord Harris, who, forgiving and forgetting the affronts he had received when in Australia, agreed to captain the English eleven, the much-wished-for match has come off; lovers of cricket have seen the game played as it seldom has been played, and English cricketers have unheld the proud position occupied by them ever since the game was first played. The team which represented the home country was deplayed. The team which represented the nome country was de-cidedly strong in bowling as well as batting, while the Australians had, owing to an accident, lost the services of Mr. Spofforth, who has during this trip, as during the previous one, proved himself a tower of strength. So good, however, was the English butting, that at the end of the first day's play it was apparent that our eleven could scarcely be beaten, even though the whole force of the colonies was ranged against it.

Going in first, England scored the enormous total of 420, and floing in first, England scored the enormous total of 120, and then got out their opponents for 149. Following on, the Colonials by Tuesday evening had lost six wickets in their second innings, by Tuesday evening had lost six wickets in their second innings, and still wanted a hundred runs to equal the English total. It seemed a certainty that the game would be over early on Wednesday. Mr. Murdoch, however, well backed up by the "tail" of the eleven, came to the rescue, and saved a one innings defeat. Messrs. W. G. Grace and Murdoch were the heroes of the match, each socing in a single innings over a hundred and fifty runs. Such batting has rarely been seen, and well did our great cricketer keep up the contraction. The overformance of the Australians was almost better his reputation. The performance of the Australians was almost better than we expected, especially their batting. Mr. McDonnell played fine cricket, while Mr. Murdoch's splendid innings will never be forgotten. During the first two days of the match upward of twenty thousand spectators watched the game. Of this great mass, nine out of ten, perhaps, were thorough judges of the game; and never have we seen a more orderly crowd. The Surrey Club, no doubt, were taken rather mawares, but, on the whole, the arrangements were excellent, though on such occasions more adequate accommediation for members of the press explit to be writing. his reputation. The performance of the Australians was almost better ments were excenent, though on each occasions more adequate ac-commodation for members of the press ought to be provided. The weather was tine throughout, with the exception of the last hour on Tuesday, when rain fell though it was not heavy enough to mon Hessay, when that the boogh it was not heavy chough to in-terfere with the play. When the game ended in a victory by five wickets for Eugland on Wednesday afternoon, few who had watched which the match—and there were cricketers there assembled from all parts of the country—went away without feeling theroughly satisfact with the play of both sides: while the grand, though hopeless, struggle made by the visitors in their second junings must consider erably raise Australian cricket in the estimation of English players. The three days' play passed without any dispute or disagreement, The three days pays passas waron, any dispute or disagreement, and a thoroughly cordial feeling seemed to exist between the rival elevens, while the spectators were equally ready to applied good play on either side. We need only add that the wicket was as perfect as a wisket could be; while, owing to the recent dry weather, the ground was as hard as iron.

ground was as hard as iron.

About twenty-five munutes past eleven the word was passed round that Eugland had won the toss, and about five munutes afterward Messes, E. M. and W. G. Grace took possession of the wickets. The Australian eleven were heartily cheered on entering the circle. Boyle delivered the first over from the northern wicket: the second bull Mr. E. M. Grace drove to the off for a single. After the third bull the wicket keeper whisked off the bulls, but there was not the slightest chance. Mr. Palmer conducted the attack from the parilion, and Mr. E. M. that to square leg for a quartette. His companion sent the last delivery of the fourth over to leg for three, which brought the 10 on the board. Both batsmen then effected a couple of cuts—Mr. W. G. for four, and his brother for three. The which prought the 10 on the board. Both outsiden then ellected a couple of cuts.—Mr. W. G. for four, and his brother for three. The 20 were speedily signalled. A lucky snick added four runs to Mr. 20 were specifity againsted. A next sance acuted rour runs to Mr. E. M.'s total. Thirty were the product of nuncteen overs. Mr. W. G. now did most of the hitting for a few overs, making a late cut for three and an off-drive for a similar number, both off Mr. Boyle. With the assistance of singles, the score traveled to 41, and then the secretary of the team, Mr. Alexander, went on in the room of Mr. Boyle. Another very line cut off Mr. Palmer for three by Mr. the secretary of the team, Mr. Alexander, went on in the room of Mr. Boyle. Another very time cut off Mr. Palmer for three by Mr. W. G., and an on-drive for a couple quickly followed, and a byc completed the 50 runs at the end of three-quarters of an hour. Another change was now tried, Mr. Palmer making way for Bannerman. Five runs were made in a couple of overs from the latter. A maiden to each succeeded; but Mr. E. M., who had been still scormaiden to each succeeded; but Mr. E. M., who had been still scoring much slower than his brother, sent a bull of Mr. Alexander's to the on-side for a couple. A single was the only item in the next four overs, and then Mr. E. M. returned the ball to Esumerman, who dropped it. To show his appreciation of this he drove the first ball afterward to the on, and the second to the off four each. ball afterward to the on, and the second to the on for four elect. To this Mr. W. G. responded with an on-drive and two cuts, from which fen resulted. A separation was now effected, Mr. E. M. when ten resulted. A separation was now elected, Mr. E. M. Grace lifting the ball straightly to mid-off. One for 91. Mr, A. P. Lucas filled the vacancy, and Mr. Palmer went on at the gasometer end in the room of Mr. Alexander. Mr. W. G. Grace made an on-drive and a leg hit for two, while a single by the same batsman caused and a leg lift for two, white a single by the same batsman caused the 100 to be registered amil great enthusiasm. Mr. Lucas now grew busy, making a leg-hit for four from Mr. Palmer, a straight dive for a like number, and a cut and two leg-hits off Banuerman, from which six came. This caused the latter bowler to make room for Mr. Alexander at 121. In the second over Mr. Lucas drove him to the on for four. Mr. Grace placed a nicely pitched ball of Palm er's rather badly; but he had the good fortune to make a single of it. Soon afterward he made six by a couple of on-drives for two and four from Mr. Alexander, who retired in favor of Mr. Boyle at 136—which number had taken two hours to obtain. M. Grace secured a cut for four in Mr. Boyle's opening over, Singles ons became the order of the day, until Mr. Grace played under a ball of Mr. Palmer's, but it did not quite reach point. Two hours and twenty minutes were expended in getting 150 runs. Soul afterward Mr. Boyle gave the ball to Mr. McDonnell. The two overs sent down before luncheon by the new bowler proved very productive. Mr. W. G. Grace made five by an on-drive and leg hit in the first, and Mr. Lucas sent the ball to square leg for three in the second. The luncheon interval had now arrived, and the total stood at 161. Three-quarters of an hour was allowed, after which

the batamen were placed in opposition to Mr. Palmer and Bannez

man. Mr. Grace soon treated the bowling with great vigor. Two leg hits for four, and a couple of cuts for three, were quickly added by him, and Mr. Lucas sent the ball to square leg for four. Twenty-one runs were the outcome of eight overs delivered by Mr. Palmer, consequently he relinquished the ball to Mr. Boyle at 203. Eight runs were produced in three overs and a half, and then Mr. Luca was unfortunate enough to play the ball on. His hits included five fours and nine twos. Parnes was most warmly greeted on proceeding to the wickets. He led off with a fortunate mick for four. The Australian wicket keeper was twice struck with the ball, once by each bowler. He bore these knocks with fortitude, however, and Strick to his post. A clever drive for four along the ground by Mr. W. G. Grace off Mr. Boyle followed, and Barnes was accredited with a snick for two. His first good hit was made off the next ball by a crisp cut for three from Bannerman. Mr. Grace obtained an off-drive for four from the professional, and then hit the ball out-curve for four from the professional, and then int the earl almost straight to the pavilion. Mr. Alexander tried to catch it, but failed: the chance, however, was exceedingly difficult. As Mr. Boyle was punished far too much to suit the colonials, he, at 254. resigned the ball to Mr. Palmer. Barnes secured a couple of cuts and an on-drive, for which nine were registered. These hits were backed up with an an off-drive for four by the Gloucestershire cap-As runs were still coming rather quickly, Mr. Alexander wa put on instead of Bannerman at 269. This proved a most judicious tactic, as the third ball Barnes cut into his wicket. Three down. Lord Harris was heartily cheered on his way to the wicket, and the first ball he received he drove to the on-for a couple. Mr. W. G. Grace hit the first ball of Mr. Alexander's second over to the off-forfour, and the last he cut with a like result. A single was then added by him, which caused him to face the enslaughts of Mr. Palmer, who was bowling with great precision—so much so, that he quite heat Mr. Grace with a ball that took his off-stump. Thus closed one of the best exhibitions of Latting that the Gloucesterthire player has ever shown. It occupied four hours, and was con posed mainly of a dozen fours, ten threes and fourteen twos. Lord Harris was joined by one of his own county batsmen, Mr. F. Penn. The former secured a leg-hit for four, and a straight drive of the like value by him shot the total past 300 at 4.45. The spectators showed their appreciation of thus by long and continued applause. After a maiden had been sent down by Mr. Palmer, Bannerman re ceived the ball from Mr. Alexander. Both batsmen continued to hit with considerable skill, and it was thought highly probable that another long stand would be made. Mr. Penn cut each bowler for four, while Lord Harris hit a ball of Mr. Palmer's very linely to square-leg for a similar sum. This brought Mr. Boyle on again. Mr. Penn hit Bannerman to leg for four, but the bowler was avenged by the very next ball, which clean bowled him. Five for 322. Mr. A. G. Steel came, and once more the batting triumphed. Four fours (three of them from Lord Harris by drives and a cut. and one to Mr. Steel by a drive) were the most notable items in the dozen overs which followed, and at 355 Mr. Palmer once more tried his hand in lieu of Mr. Boyle. This seemed quite to the liking of Mr. Steel, who cut the first and last balls of his third over for four each. Mr. Alexander was consequently put on at 389, Mr. Moule a few overs before having relieved Bannerman. Mr. Steel cut the first ball of the former change for four, while in the next over Lord Harris made a grand drive to the boundary, which caused the "400" to be hoisted. A slight drizzling rain now fell, but it was not sufficient to interrupt play. Mr. Steel having hit a ball of Mr. Moule's to square leg for four, was deprived of the company of Lord Harris, who played the ball into the hands of slip. Six for 404, no less than 82 having been added since the fall of the previous wicket. Mr. Steel only outlived his captain for three overs, when a fine catch high up by mid-on disposed of him. Seven for 410. The Hon, A. Lyttelton and Mr. G. F. Gvace were now associated, but the partnership was brief, as before even a single had been added Mr. G. P. Grace was taken at mid-off. The day's play was now at an end, 410

runs having been recorded at the cost of eight wickets.

The slight rain of the previous evening had no appreciable effect on the wicket on Tuesday, when the weather was again fine. Shaw was deputed to aid Mr. Lyttelton in the batting at five minutes past deven o'clock. This he did not do with much range with his leg stump. Nine for first ball of Mr. Moule's third over took his leg stump. Nine for his ball of Mr. Moule's third over took his leg stump. Nine for last man, added a couple of runs (one from an overthrow), and Mr. Lyttelton augmented the total with a cut past cover-point for three rund a single, when, in attempting a run which should have been easy enough to get, Morley was run out at 11.29. Total, 429. Dur-

ation of innings, five hours fifty-five minutes.

Twenty minutes elapsed before the English took the field, Ban-Twenty minutes etapsed notice the Lugiani con, the horizontal neonantal neonapanied the capitain, Mr. Murdoch, to the wickets, they being loudly cheered on their way thither. Morley delivered the first over, which was rather roughly dealt with by Bannerman, who hit the first two balls to leg for four each, and secured a single from the third. He continued to hit well, and the first twenty-eight runs (which, besides the hits mentioned, included two others to leg and an off-drive for four, and a cut for three), were all made from his bat. A great misfortune now befell the visitors, as Mr. Murdoch wa wonderfully well caught by Barnes at mid-off. One down. Mr. Groube appeared, and a quick chance was soon given by Rannerman to Morley at forward short peg. This obraced by the Notts professional. This opportunity was not, however, em-A single only came from the four following overs. Bannerman then made a cut for three, and four more were placed to his credit, three of them being the result of an overthrow. Another slight chance was given to Baunceman to slip; but, although this was not accepted, he did not profit much by it, as the first ball of the very next over upset his leg stump. Three for 39, the score being a single out, as the number must have been even, as the batsmen were at the same ends at which they started. Mr. McDonnell joined Mr. Groube, who cemented the partnership with a cut for three, and soon afterward made a similar hit for for Mr. McDonnell in the meantime had obtained eight by a couple of square-leg hits and a snick. The total having traveled to 59, a ball of Mr. Steel's, with a good pitch, rose much more rapidly than Mr. Groube had calculated, and took off his stump. Mr. Slight part. Mr. Slight partnered Mr. McDonnell, and at 62 Shaw supplanted Morley. The first-named batsman had a narrow escape of being run out in the second over of the change, but the hall was hadly returned. This betamen then drove a ball of Shaw's over the heads of the crowd in the direc-tion of the tennis court. At 84 a double variation in the attack was tried. Shaw crossed over to the northern wicket, and Morley went on at the pavilion end. The latter was a step in the right direction. The second ball Mr. Slight played into the hands of third man, and

the fourth Mr. Blackham returned very hard to Morley, who secured it admirably with his left hand high up. The bad fortune of the Australians stuck to them, as Mr. McDonnell was well taken at midon at 89 Mesers Bonner and Boyle were now in possession, and the on at 89. Messer, honder sun boyle were now in possession, and the former played a few balls in a style which threatened to give the attacking party some trouble. He was prevented from doing so, however, by a splendidly judged catch at long-field on by Mr. G. F. Grace : the ball seemed to hang a long time in the air, but the field man waited for and eleverly secured it. Seven for 97. Mr. Palme appeared on the scene, and four byes caused the three figures to b Mr. Palmer signalled on the telegraph board. Mr. Boyle continued to bat in pretty good style, relieving the monotony of singles with a drive to the rails in front of the pavilien. Mr. Steel resumed in place of Shaw at 112, but the other bowler clean bowled Mr. Palmer when a single only was added. Mr. Alexander's efforts were not particularly successful, as, with the addition of thirteen—six of them from his but-he collapsed through a very smart catch in the slips close Mr. Moule, the last man, joined Mr. Boyle afterward. made a drive for four, and a snick for a like sum. At 142 Mr. Grace relieved Mr. Steel, and, after an addition of seven runs, Mr. Moule played a ball of his to short-leg, where Merley caught it. Total 149, Time, three velock. Duration of innings, two hours thirty-five min The wide differences of result at the close of an innings each was

enough to dishearten any team, but the Australians did not show the white feather at all. The same order was not preserved in the first venture, Bennerman being accompanied to the wickets by Mr. Boyle. Shaw and Morley were this time entrusted to open the attack. The second ball delivered by the fast bowler struck Mr. Boyle severely on the hand. Bannerman then cut Morley for four and three, and this, with a single to him, was the only contribution made when he skied the ball to square-leg, and Mr. Lucas ran from midon and caught it. The colonial captain, Mr. Murdoch, now came, but was the unfortunate witness of the downfall of two of his companions. Mr. Boyle started for a second run, but the ball was pamons. Arr. Boyle started for a second run, but the tall was promptly returned by Mr. Grace to Morley, who put the wicket down before the batsman had got within the crease. This disaster was quickly followed by another, as Mr. Groube was admirably caught in the slips without having scored. Two for 13, three for 14. It now seemed exceedingly likely that an easy one-innings victory was in atore for England. Mr. McDonnell arrived to the assistance of the Mr. McDonnell arrived to the assistance of the Mr. McDonnell arrived to the assistance of the Mr. McDonnell arrived by the Mr. McDonnell arrived to the assistance of the Mr. McDonnell arrived to the assistance of the Mr. McDonnell arrived by the Mr. McDonnell arrived by the Mr. McDonnell arrived to the assistance of th in store for England. Air, Mcrobilell arrived to the assistance of Mr. Murdoch, and both batshen played skillfully and carefully Five runs were put down to Mr. Murdoch, four of them from an overthrow which sent the ball to the boundary. After this mishap the fielding became exceedingly good, but both batsmen continued to play the bowling with confidence. Mr. Murdoch made two cut for four each, and Mr. McDonnell emulated this performance by making four drives, from which no less than sixteen runs accrned. This caused a feeling of dissatisfaction in the breests of the at tackers, and Barnes consequently relieved Morley at 51, and Mr G. Grace did the same kind office for Shaw a run afterward. This did not at all interfere with Mr. McDonnell for some time, who made three fours by on-drives and a cut. Mr. Steel relieved Barnes at 68. In his second over, Mr. Murdoch cut the ball past cover-point, and drove the next one to the on, from each of which four runs were gained. This he quickly supplemented with a square-leg hit for the same value. Nor was Mr. McDonnell idle, as he twice drove Mr. Grace to the boundary, the ball pitching near the same spot each time. His downfail, however, came swift upon him after this, as the next ball he stopped with his leg, and an appeal for 1 bw by Mr. W. G. Grace was favorably answered. Mr. Slight's stay was air, v. G. Grace was ratorany measured. Air, sugarts say was brief and unprofitable; a grand catch by Lord Harris just in front of the ropes at long-off dismissing him. Five for 101. Mr. Black-ham fared much better than he had done in the previous venture, and in conjunction with Mr. Murdoch, caused the bowling to undergo many changes. Mr. Steel gave way to Morley at 112, and a dozen runs later Shaw displaced Mr. Grace. This latter chang not suit, as each batsman cut the ball at four, and Mr. Blackham sent it to the on for a like sum. The slow bowler, therefore, was taken off for Mr. Lucas, at 143, and, without anything more, Mr. Blackham played the ball to "the doctor" at point. Mr. Bomer supplied the vacancy, and both he and Mr. Murdoch retained possession of the wickets until they were drawn, the total then being 170, Mr. Murdoch baving made seventy-nine and his compenion thirteen

A short day on Wednesday was fully expected, as 101 runs left to the four uncaptured butsmen to obtain to prevent the Australians suffering a single-innings deteat. The game was resumed at 11.15, Morley and Mr. Steel opening the bowling against the notonts, Messrs, Murdoch and Bonnor. The colonial captain soon gav evidence that he was in as good form as on the previous day. Hi first hit was a cut for four, and soon an off-drive for a like number was effected by him. His companion gave signs of not being comfortable with the bowling, and when eleven only were added to the overnight total he was alregether in the dark about a ball of Mr. Steel's, which clean-bowled him. Mr. Palmer, who followed, did not inspire his side with much hope, as he returned the ball to the smateur at 187. Eight down. There were still 84 runs required to prevent the immigs defeat, and even the most sanguine friends of the Their wildest expectations were, nowever, more than realized. Mr. Alexander assisted Mr. Murdoch, and this, too, with a great measure of succees. Mr. Steel was soon hit about with freedom, and at 27 he gave up the ball to Mr. W. G. Grace. The last arrival then sent Shaw to square-leg for four. This bowler then gave Mr. Murdeel, a rather upg knock, which delayed the game for a few minutes. The batsman, however, continued his hitting in a very placky style and with the same measure of success. He completed his hundred shortly afterwards amidst the most deafening cheers of the spectators. Mr. Alexander, who at a critical point had batted in a careful and effective manner, was now forced to depart through a catch in slips. Nine for 239. When Mr. Moule joined the captain there were still 32 runs needed to prevent the single-innings beating. fieldsmen were all on the stort, and most of them surpossed them-The batsmen, however, played with corresponding care. The 250 was quickly gained, and Mr. W. G. Grace gave up the ball first delivery Mr. Moule sent Morley was played with great confidence by Mr. Murdoch and the left-hand bowler had to make room for Shaw. This had the effect of lessening the rate at which runs were gained, but did not the left-hand bowler had to make room for Shaw. This had the effect of lessening the rate at which runs were gained, but did not get the coveted wicket, so Morley came on again. This did not make any difference to the batsmen, and at five minutes past one

o'clock the deficiency in the first innings was rubbed out, smidst the greatest enthusiam. A sharp run now nearly got rid of Mr. Mur-doch, but the ball was returned to Shaw too wide for him to do anything with it. A complete change in the attack was resorted to at 297, Messrs. W. G. Grace and Lucas going on in place of Shaw and 221, Messie, W. Corrice shi Licess going on in piace of Snaw and Morley. In the first-mance bowler's opening over Mr. Murdoch cut the ball for four, which sent the total up to 300 at 1.40. Other alterations in the bowling were effected. Mr. Penn, Mr. Lucas, and Børnes all trying their hands. The betsmen were by no means disconcerted, however, and when two o'clock arrived they were still unvanquished, the total being 324. After luncheon Mr. Steel and Barnes took charge of the bowling, and Mr. Murdoch gave the only chance of his innings to the wicket-keeper, which was not taken.

Mr. Moule did not exhibit the same confidence as he had done in the morning, and ten mountes proved sufficient to finish the venture, Mr. Moule having his stump knocked over. Total 327. The Anstralian captain was almost carried in by the crowd, who showed the by the remarkable performance made against the best bowling and fielding in England. His chief figures were one five, eighten fours, three threes, and two twos.

The 57 runs necessary for England to win would not, it was natur-

ally thought, cause much trouble. It proved, however, a far more diricult task than had been anticipated. Mr. Lyttelton, the not-out of the previous innings, was sent in with Mr. G. F. Grace to com-Messrs. Boyle and Palmer took charge of The Australians were well on the out rire, and considerable DBH. The Australians were wen on the qui tree, and considerable consternation was caused when, with his second ball, Mr. Grace was clean bowled, and thus got a pair of spectacles. One for 2. Mr Lucas came, but his career was brief caught at wicket. Two for 10. This was very bad, and a fear almost too dreadful to think of took possession of many of the spectators. This feeling was intensified when at 22 Mr. Lyttelton was dismissed by Mr. Palmer. Three down, and not half the required number of runs obtained, was indeed a sorry outlook. Xine runs only were added, and then a double disaster befell England, Barnes Leing caught at mid-on, while Mr. E. M. Grace played on. Four and five for 33. Mr. W. G. Grace appeared on the scene, and slowly and steadily the total advanced Mr. Penn made two drives for four, and then gave a hard chance slip, which was not accepted. Mr. Grace also had a narrow escape of being caught and bowled. A cut for four was placed to the credit of the batsman. This left one run to win, which was obtained by the Gloucestershire captain at 4.15.

As a complete score was published in issue of Sept 30, we refer ---

The Editor of these columns returns his thanks to the San Francisco Yacht Club for his effection as an honorary member. The yachts men of the Pacific Ceast have shown so more enterprise in the horoduction of the yawl, a rig which is destined in time to become popular on the Atantic scaloard as well, and they have lead the way in adopting iron centre-tourds med ordiside lead, that we deem it an especial honor to holst the S. F. A. C. Jurge in our drawing onice as a pleasant reminder of the compliment conterred

FOR two long years Forest and Stream stood alone among its contemporaries in its citoris to induce a change in public sentiment, a change from the first botten, oversparred, beauty, fight weights then ruing inglis in favor single stay-schooline tars and a class that was continually crying "in our simples waters" because they feared to critise tayout the mind this at fact, wey doors. The enemy was attacked all along the line, a desperate light considerable with the context way. The mentally consistent to the various asylines the country were. No one washed anything but a Sound was sufficient to desperate light consistency of the context way. The context was a simulation of the context was a final section. So the washed anything but a Sound was smooth and the man who proposed to cruise become the context was a mandac, out. And then depth was against speed, said the heroes of the jack-saile, the deep you went down the "more resistance you found." The shoop in at its denormity, its rank sheer, bottail sterr, maniserd shamy, ungoingly spars and broomstick pole spiked above the cup, its hoos-nose bowsprit, smack-like finish and inbefer? pig: its asils an eyesor to men of taste and a butt of riddente to schools; commons hoist and area, unmanageable to a degree; land enough on their heins to make a rank sheer, bottail strip, more the cap, its hoosenese towspring smack-like finish and inther's right sails an eyesore to men of taste and a but of ridicule to encore common short and area, unmanageable to a degree hard enough on their heims to make a sail aware hearst to steer; tip-mainters in a sent dangerous munitarity services and the strength of their heims to make a sail aware hearst to steer; tip-mainters in a sent dangerous munitarity services and the strength of them before some from the formal beings under a "hearst" only, the crees sweet forward in strongs under a "hearst" only, the crees sweet forward in strongs which is the sail of the strength of the strength of the public as the inglied attainable. All treatise, forsooth, a quarter of a century ago the famous America—a very different seri of craft—outsnied a tot of Emilia owel pumpline around the lefe of which though inding a stinger latter for all security got away with a complet of rough wather yearns underraged for the wond they different seri, effected for a special dept, subsequently got away with a complet of rough wather yearns underraged for the wond they after match without perturb a repeayarm, while the ensaitles become own sunsayers run up a mee round sum of money for "repairs." But, happily, a change has come of or the sense and a great deal more is in prospect. Forser and Silvan, single handed, went into the fight. The finitis of the cloop in model and rig wrepointed out, the curter put before the purple in her true light, while prelimbes were smoothed away or moonied. Dean and fair fine, high eligible escaped on its rand on large, centreboards, mad pour sensitive by high a change was the sense that and the second above near the contract of the sense and a great deal more is in prospect. Forser and survey or moranded, bean rund into four, high eligible escapes monothed away or moranded. Dean rund fair fine, high eligible escapes monothed away or moranded, bean rund fair fine large, high or the categories and endowed the contract of t

belies, hore hold, more deel room, loss house with flush deels or "false" coccepits and housing topmasts are universal. Longer gaffs with loss host; in other words a hower, where sail; double head rig, either full entire or a compromise of some sort among the more timal; ample freeboard with loss sheer, the man who wastes his boat in nose and galliott stern being an object of compassion; bright deeks and a notable absence of yellow, blue and green; a more complete inventory, a great deal more scannashing, a fair amount of any against the picue, beer and "sailing party be read to be a subject of the property of the sail of the property of the sailing party of the sailing party be a subject of the property of the sailing party of the sailing party should be a state of that real sea life which should be, after all, the one great each of yachting.

Faster than we had expected the ideas at which we have hammered and driven in this journal have become popular far and near; and, as if to cap the choaxy, some zealous converts overstep the bounds of probability, and go further than we ever ventured, any yacht cong particle of the sail of the yachting party and the property of the sail

THE WEATHER GAUGE. - In last week's edition we printed in these columns ten letters from yachtsmen all over the country; tour more communications and twelve inquiries were lett on our desk as "unfinished business;" a total of twenty-six letters re-lating to yachting received in one week, which is exactly twentysix more than received by all our contemporaries together, and a fair index of our relative circulation among the sailor sportsmen. It is not boasting to claim that no other journal in America ever attained one-quarter the circulation among yachtsmen we now enjoy in all quarters of the globe.

#### YACHTING NEWS.

Manning's Circular,—Maining's Yacht Agency, the oldest and most rehable of the kind, has just issued a new circular and price list, graing particulars of a large number of yachta, both sail and steam, new in the market. Those on the lookout for bargains should take notice, as at this time of the year such property can be bought at lower figures flum in spring.

A BIG ENTLAPIBLE,—We have received details of the new company formed to build a fleet of steel steamers, 500H, long, "unshidable" and "unburnable," their speed to be 30 miles an hour. The scheme is practical, and deserves the support of capital. Further particulars can be had from Mr, Darius Davison, 19 Park Piace.

The science is practical, and deserves the support of capital. Furthere particulars can be had from Mr. Darius Davison, 19 Park Piace.

Dorgerster Yacht Club, —It has been determined hereafter to adopt a genuine "Bying start" to a single gun, with no period of tem or differen minutes grave. We have all along fought for the investment of the control of the property

this winter.

4 Fine Purchase.—Mr. J. Bell, Jr., of Belleville, Ont., has beight the new Bloodhound from Cuthbert, of Trenton, the latter taking Mr. Bell's Kathleen in part payment. Bloodhound, in racing bands, will show a lot of speed.

hands, will show a lot of specia.

Handroo Moron Reprivos.—An experimental launch of 20 ft, has been tried on Narraganset, Bay with apparent success. How it compares with other engines in point of weight, economy, etc., and to what size it can be worked, is still largely a matter of con-

Jecture.

HAMILTON REGATTA.—The citizens of Hamilton, Ont., displayed mayorited energs in collecting subscriptions for an open race, Sept. 25, and as the sailing was very successful, it is certain that another permanent aminal addition has been made to the fixtures on the lakes, where yachting has so rapidly taken a firm hold upon popular fancy during the past few years. The list of prizes, etc., offered for the day were published in a previous number. Both Cygnet and Bloodhound failed to show up as hoped, but the other classes filled well. A light easterly breeze saw them out, Madeap leading, followed by Brunette, Cacique, Coquette, Essape, Orde, Endie, Cord, and Alarm. The second class got away soon after with

Mystery first, Peri, Lark, Gipsy and Jellet following in close order, all with ballooners at rull play. After rounding the first booy, Alarm began to pick up, and off Brown's wharf Coquette had spain out a lead of the lot. Overhanging clouds portended a storm, but the wind simply took to veering all round the compas, and reduced the match to a toss in p6r luck. Coquette got it lively at one time, and took a bad knockdown, while Madeap and Brunerte, with topsails aloft, pulled up on her. The first round still saw Coquette leading for she rounded the flag-boat at 1.38, Madeap following set at 1.49, 3, meets at 1.67, the big Alarm now feeling some of the set at 1.49, 3, meets at 1.67, the big Alarm now feeling some of rounded to the flag-boat at 1.38, Badeap following set at 1.45, 3, meets at 1.67, the big Alarm now feeling some of the flag of the set of the s

Jur open houts was won by the Petrel from Toronto. EMMA VS. KATIE GRAY.—In a match between these two sloops at Belleville, Sept. 25, \$\frac{100}{2}\$ against \$75\$. Katle Gray won with two minutes to spare, adding another to her long last of winnings. The Gray was saided by D. Claus, and the Emma, of Kingston, by Capt. Cuthbert.

Cathbert.

New Canole Club, —A number of gentlemen have formed a new canole club, the object being to establish headquarters and accommodation within the city bunts. They propose for the present occupying a heathonic at the foot of Seventy-second street, North River, Among the members are: Arthur Dechano, H. T. Keyser, Joseph Istody, A. Lockwarthal, Simon Brentino, N. S. Leo, R. J. D. Ster, J. J. Falls, C. A. Peverchy, R. J. Wilkins, R. E. Denne, and others

others.

Varduara,—Fifteen winning flags and \$5,570 eash is what the famous steel "minty" has netted her owner in her first season. Eight years of that sort of thing pays of first cost and then a high rate on the investment. She promises to cost least that any other yacht in the end, though of most costly build. The best is always the cheapest.

the eneapest.

California, Too.—Capt. Turner has departed somewhat from
his customary model in the new schooner he is building for Mr.
Bowie. She will be deeper, have more deadrise and an easier bilge
than his former craft.

bis entstomary model in the new schooner he is building for Mr. Bowie. She will be deeper, have more deadrise and an easier bilge than his former craft.

Pactice Flexer.—Cipd. Jabez Howes has sold the Annie to Com. Allen for \$2,000. Cases, a fine keel schooner, has had a llying jibboom shipped. Consucled has had 'several tona' of lead east to like the keel outside. Sensible Consucled, take no steek in the yards handed down from Noah that outside ballast makes a boat fead, whatever that may mean. Purvis, of Oakland, has in hind a \$20. schooner, and Commodore McDemongh's new schooner will soon be launched. There is plenty of activity among the yachtsmen in San Francisco and the fleet is growing rapidly, the schooner of about 5001 secaning set popular.

Sax Francisco Yacher Club.—The owner of the steam yacht Launcishie Witch, 700 tons, Sir Thomas Heskelft Bart and M. C. P. Kuiharatt of the Foinser axis Strieam have been cheefed homorary members of the club. The home at Samerich and wharf are to receive a thorough overhauling to meet the needs of the growing number of members and an increase in the flect.

Ocan Swedistans.—The ocean sweetstakes regath for keep well as the first of the second load to save her cultimace. Fite yachis entered have been developed by Dalingham & Bond. The Lily had been handed for two classes, those above and those under \$27 feet, and the stakes were \$20 each, the second load to save her cultimace. Fite yachis entered would by Dalingham & Bond. The Lily had been handed for two classes, those above and those under \$27 feet, and the stakes were \$20 each, the second load to save her cultimace. Fite yachis entered would by Dalingham & Bond. The Lily had been handed for two classes, those above and those under \$27 feet, and the stakes were \$20 each, the second load to save her cultimace. Fite yachis entermed had no made a fair showing. Viking Sunbean and Neva started soon after 10 o'clock. The rorse was sailed under the rules of the Dorchester Yacht Club. The course was from fit Bestom Yacht C

Katio Gray W. H. Campbell, Belleville	11	53	27		

Rain Gray. W. It. Campbell believille. It is not a first portion of the race was a run almost dead before the wind to the eastern busy, and the wind light from southwest. All carried whole mid water sail, each yacht being in fact, a moving pramaid of anowy carries. On the run flown the Kattheen and the Grace bothered cach other, and the Emma taking advantage of this, slipped into first place, while the Katte, bringing a better breeze with her, closed rayidly on the leaders, and soon after the first busy had been rounded, and the work on the wind commenced, site got the lead and held it during the rest of the race, except on two stretches, when the Emma headed her, but regaining her lead on the next leg, slic kept a steady gain on the fieet. The Gracie—

first to start—was last shortly after passing the first buoy, Lut passed the Kathleen before the starting point, and did the same by the Emma before turning the western mark. This advantage she held, though closely pressed by the Kingston boat, until two other dages had been passed, when she fell back into third position. The Kathleen took advantage of some laffing which these two indulged in, and gained second position on the last round, which she held to the end, finally winning second prize by 17 seconds only from the Emma, which was fast closing upon her, the time at the finish being:

Wh. DRICE.—Several inquirers are referred to our news columns of last week for information about wild rice.

C. F. M., Worcester, Mass .- The address you ask for is as follows: J. H. Scott, Shirsk, Yorkshire, England.

Suor, Brooklyn.—Mr. George C. Colburn's Duke was bred by Shory, Brooklyn.—Aff. George C. Colburn's Dinke was acreed by Mr. A. C. Waddell. He was a cross-bred, English, Irishi and Gordon. Color, black and tan. Dinke was by Colburn's Dash, out of Mullin's Belle: Dash, by Pultuan's Dan, out of Valentine's Famy; Belle, by Pollenius' Duke, out of Jane. In 1877, second

W. P. S., Blue Point.-Write to the correspondent whose letter nathe Game Bag department of our last issue answers your inquiry C. W. C., Colorado,—The dogs you refer to were Dandie Din nunts, dog and bitch imported by Mr. Robert Hume, Eastville. Northampton County, Va.

W. W., Milwaukee.—Have the lake trout caught in Lakes Huron, Lrie, or Michigan scales on them? Ans. They do; all trout have sosles. Dry the skin, and you will see them plainly.

very good and clearly expressed. Your puppy died of pneumonia or pleuro-pneumonia). This, however, is not the so-called "dog distemper." G. H., Hudson, N. Y .- The post-mortem description sent us is

J. S. K., Long Island.—Fred is full Gordon setter. imported by Viscount Parker; dam, Diana, imported by Agent Na-tional Line of steamers. Nita is half Gordon and Irish, being out of Nellie by Plunkett, both imported by Dr. Goldsmith, of Rutland,

F. W. C., Hamburg, N. Y.-We regret to hear of the accident re ceived by your setter. She is suffering from paralysis, the result of a spinal injury. Rest is probably all that can do her good. Without being able personally to examine her it is impossible to ad-

J. S. Z., N. Y.-We cannot advise you to cross a setter with a esmiel, or a setter with a pointer. Of the two the latter is the best, and the get are called "droppers." We have seen some wonderful field dogs that were droppers, but we have also seen much better dogs that were purely bred.

C. B. D., Providence, R. I.—Your dog has internal cauker of the car. The first thing is to remove any exciting cause that may exist, such as dirt, hardened cerumen (wax), etc. Syringe the ears with lakewarm water, and, in the case of hardened wax, use a little olive cil. Carefully dry with a soft cloth, and use liniment and treatment recommended to H. M. H., this column.

YMROD, Evansville.-I have a Scott gun, with a 3-inch drop, and cannot catch a quick sight. 1. Can I have it straightened to 2½ without spoiling the looks of the gun? 2. Will the stock be just as hard and strong as ever? 3. Have you ever heard of any gun-tocks being straightened with success? 4. What is the average drop of a gun? Aus-1, Yes, 2, Yes, 3, Yes, dozens of them 4. 2½ to 3½ inches.

F. W., Newark, N. J. - The description of your puppy's trouble is of which was a day for two weeks and write the result.

H. D. P., Brooklyn, L. I.-1. In a recent issue of Forest and SIREAM you state that Putnam's Dan was by Palmer's Dash, out of Putnam's orange-and-white setter bitch Nell. Is this Stephen Putnam and Frank Palmer? 2. Are Putnam and Palmer alive? 3. As I have some of the above-named strain of dogs in my kennel, is the pedigree given a correct one? I have it, Putnam's Dan by Paul Mead's Old Dash. Ans. 1, Yes. 2, Yes. 3, Yes.; Paul Mead's Old Dash was bought by Mr. Palmer from Dr. Mead

C. F. K., Westfield, Mass.—I have a pointer dog who has had a cough since last spring. He coughs most while running about

after being let out in the morning. If he rests for a while, and then starts to run, he begins coughing again. His cough is a sort of gagging cough, and he raises a white frothy mucus. What os gauging couga, and me raises a winte trothy mucus. What shall I give him? Ans. Administer emetre of table salt—small tablespoonful. Follow with desert spoonful of sulphate of mag-nesia, and repeat the next day, and be careful in the dog's diet. T. C. L., Rockingham, N. C. –Have you ever heard of a good

gun of English manufacture having been burst by Dittmar powder? I have known several guns of American make burst with black powder, charge not exceeding 4 drs., if so much. I have used Dittmar for two years, and like it. May not the fault be in the gun, and not in the powder? Ans. If you have read the last two numthere of this paper, you are as capable of judging of the merits of the Diffmar powder as we are. One of the guns mentioned in letter of attorneys last week was of English make, and first-class at that.

H. M. H., Cincinnati.—For internal cauker use the following liniment, taking care to shake the bottle before the mixture is used: Goulard's extract of lead, one ounce; glycerine and car-bolic acid, quarter ounce; finest olive oil, four and a half ounces. Avoid feeding meat, and the diet should consist partly of boiled green vegetables. It will be of advantage in treating cauker of the ear to give the dog Epson salts, one drachm to three drachms, according to size of the animal, twice or three times a week. See answer to C. B. D., this column.

H. W. H., Brooklyn, N. Y. -As far as we can make out, there is no universal standard of what a cocker spaniel should really be. For months past we have been advocating the organization of a cocker spaniel club, which should regulate the standard and draw up a scale of points that will be looked upon as authority in this country. In next week's issue we will publish a letter from a cocker breeder, and other articles of a like nature are to follow; from these you must draw your own conclusions. Our kennel notes and advertising columns will acquaint you with the names of the leading breeders.

Yellow Legs.-1. Is a cocker spaniel good for quail and grouse What is necessary in training them besides charging and re-trieving?
 When is the law off on quail in Connecticut? Ans. 1. A cocker spaniel can be used with great advantage for woodcock in the brush and coon. For quail and grouse a setter or pointer should be used, although corkers are used to make the latter bird tree, and thus admit of its being "potted" by those who are not experts on the wing. 2. Having them mind explicitly, working always in range of the gun, and dropping to "wing" and "shot,"

E. N., Newcastle, Pa.—I have a black setter dog, five years old,

that is afflicted with some disease which I believe to be distemper. He seems very stupid, nose hot and dry, appetite good; have had him in the woods recently, and he seems to have completely lost his sense of smelling. What shall I do? Ans. The symptoms you give are not those of distemper. Possibly the dog is suffering from fever, the result of cold in the head. Give heaping desert spoonful of sulphate of magnesia and repeat next day. low with two grains of quinine three times a day for two or three weeks. Write result.

C. W. L., Northfield, Vt.-The pedigree of your English setter puppy is incorrect. Ex-Gov. River, of Massachusetts, never owned a setter bitch. We cannot refer you to better articles regarding the breaking of dogs than those published recently in the Forest In our kennel department of last week's issue you will AND STREAM find the instructions for breaking dogs taken from Mr. Shaw's "Book of the Dog." We refer you also to these hints, which are from the pen of Mr. James Fletcher, of Glenmarkie Lodge, Huntley. Aberdeenshire, N. B., whose experience in breaking operations

G. W. C., Bowling Green, Ky.-I had two setter puppies aged seven and eight months. They were taken sick, beginning to mope around. They had no appetite, and the skin, white of the eye and gums and lips turned yellow as gold. One of them died last night, and the other is very sick. What shall I do? Ans. Your puppy died of jaundice. The cause we are unable to indicate. It would, however, be worth your while to investigate the local or special conditions to which the puppies have been subject. If the remaining puppy is still alive, remove him to different location, and give tising or watching our advertisers' cards

two grams of quinine four times a day, and also four small deses of calemet, three grains every twelve hours. Feed on broths, etc. SWELTER, Boston. -I am surprised to acc that your columns of "Sea and River Fishing" contain nothing about smelt fishing. am a lover of the sport, and I would like to see a little said about it, because smelting is about the most important fishing in Boston. Why is it? Ans. Evidently because no one writes on it. As you are so interested in it, let us have an account of how you do it. including lines, size of hooks, bait and all about it. The department to which you refer is mainly tilled with correspondence, with an occasional editorial note attached. You can easily see that you as much to blame in this matter as any one, for we do

write fishing stories. Try it and it may wake up some one to gave

their mode, and so we can all learn,

W. D. B., New York City, -1, Where in New Jersey will I get good quail and suipe shooting? 2. Will you also tell me what ails my Newfoundland pup, tive months old? She is low spirited, no appetite, and after eating will vomit. Her eyes are also weak. Ans. 1. There are plenty of quail in all the Southern counties of New Jersey; also in Warren and Sussex. You will find difficulty, New Jersey; also in Warren and Sussex. Joh win mid airmenty, however, in shooting, as the farmers are opposed to city sportsmen. If by "snipe shooting" you mean what is known as "lay snipe shooting," the season has past. If you inquire about the English snipe shooting, it is very doubtful if sport of this kind will be had at all this season. Unless we have a three or four days' storm to wet the meadows, and that at once, there will be little suiper were true incomes, and that at once, there will be fulle supershooting this setson. The mendows near Warelown and Pine Brook are considered good spots. 2. Give a tew doses of sulphur, large half-teaspoonful every ten hours, until three or four doses are given, then follow with caster oil.

J. E. H., Vermont.-Can you explain why my setter bitch fails to have pupples? She is four years old, and has had one litter of pupples when two years old before I owned her. On the last two occasions when she was in heat, I have had her served by a dog five old. These are the only times the dog was ever put to a

The first time it was nine days after she commenced to be in heat, and the second time it was twelve days. She was with the dog only once on each occasion, and then took the dog readily. The dog was in fine condition as to flesh, and the bitch rather fat. The question is, what is the trouble? Can it be that there is anything wrong with the dog? He is well bred, and the only one I know of in this vicinity, so I am anxious to use him. Should they be left together longer, or have I chosen the wrong time? She remains in heat from sixteen to eighteen days, and I have supposed that about the middle of this period was the correct time? Your bitch is probably too fat; reduce her in flesh by giving plenty of exercise. She should be warded twice on two successive days The last third of her period is the proper time. It is unlikely there is anything the matter with the dog,

B., Newburg, N. Y.—Can Scotch staghounds be used to advantage in hunting deer in this country? If so, are they as good as our ordinary deerhounds? Is there a breeder in this country from whom I could get one? Ans. The Scotch staghound, as ordinarily trained, follows the deer by view alone, and would therefore be of no use in hunting in this country except on the plains, where the quarry can be kept in sight. They would, moreover, be too fast for ordinary deer-driving, in which it is essential that the bounds shall keep close to the deer, or that the latter shall be very much frightened. Stouchenge, it is true, considers that the staghound or rough greyhound, for we presume that it is of this animal that our correspondent writes, possesses nose enough to follow even a cold These dogs have been extensively used in both deer and antelope hunting in the West, but have not proved so useful in this sport as have the smooth greyhounds, which have more speed, though perhaps not so much strength. The old English staghound was es tially a larger foxhound, in respect to his head, and had a body like a bloodbound, but somewhat lighter. The English stagbounds of the present day are merely a larger and lighter draft of the ordinary foshound. Stagbounds are frequently advertised in our columns, and our correspondent can, no doubt, obtain one either by adver-

Prices: Carbines, \$22 Frontier Rifles, \$22; Sporting and Hunting Rifles, \$25. Discount to the Trade Only. Sendfor Catalogue and Price-Lists. E.REMINGTON & 80NS, 283 Broadway, N.Y. Only. Send for Catalogue and Price-Lists.

THE MANUFACTURERS OF THE "FOX" GUN, FEELING THAT DEALERS, us a general thing, have not done justice to the merits of this WONDERFUL GUN, are determined to have them placed before sportsmen more generally, that their gwat merits may become better known and appreciated. It is needless to speak or THE ELEGANT WORKMANSHIP AND WONDERFUL SHOOTING POWERS of these guns. It is a fact well established that they are UNSURPASSED BY ANY IN THE WORLD.

We propose for a limited period to offer a line of these guns at the following EXTREMELY LOW PRICES, after which the original prices will be restored, our object being to introduce the guns into sections of the country where dealers have failed to present them; in the firm belief that where they become known they will be the established favorite, and we shall reap the benefit in future of this great sacrifice.

Such Inducements Have Newer Refore Rean Offered

#### FOREST AND STREAM.

Answers to Cobrespondents . . . . . .

NEW YORK, THURSDAY, OCTOBER 14, 1880.

VELOCITY OF SHOT .- We promised some weeks ago the publication of the full text of Prof. Mayer's paper on the We regret to state that, owing to the sc-Velocity of Shot. rious illness of Prof. Mayer, he has been unable to prepare the manuscript for our columns, but promises it to the readers of the Forest and Stream as early as practicable. An imperfect synopsis of the article appeared, at the time it was read, in some of the daily papers, and has since been copied by some of our exchanges. We thought it due to Prof. by some of our exchanges. We thought it due to Prof. Mayer and to our readers to publish the article, when we do publish it, complete and as its author would have it appear.

SPORTSMEN'S ASSOCIATIONS OF WESTERN PENNSYVANIA. The Sportsmen's Association of Western Pennsylvania has 300 members; in fact, 282 appeared at last roll call. The association is now ten years old, and still growing. It is composed mainly of business and professional men, who have done much to enforce the game laws. Their club room is 50 feet front by 80 feet deep, situated in the most populous part of Pittsburg. The first floor is divided into a reading room, library, card room and a large billiard room The second story is called the assembly or meeting-room, and besides the numerous chairs and tables for officers and members, contains cases of rare specimens of birds shot by members of the Association, as well as a large variety of small birds purchased from a skillful taxidermist in Massachusetts, making in all about 3,000 good specimens. Their exhibit of animals and reptiles is quite small, and some of the boys had better go after snakes a little.

The Alleghany Sportsmen's Association of Alleghany county is a little over one year old, and has at least 100 members, with headquarters in Alleghany City.

#### NEWSPAPER'S RESPONSIBILITIES

A S newspapers are managed by individuals, they are no A less liable to error than the latter. And, although employing the impersonal "we," their responsibilities to the public-to their readers and advertisers-are no less binding than are those of the individual business man. Moreover, because of their greater facilities for obtaining information there are certain duties incumbent on the publishers of a newspaper from which commercial men are free. They must especially avoid advertising any article or implement that may be injurious to health or dangerous to life or limb. No concern can shirk the responsibility which will attach to it, if it knowingly advertises a dangerous gun or an unsafe pistol. Every one knows that a safe rifle cannot be made for \$5, and if persons represent that they are selling such a gun for that sum, this representation is prima facie evidence that the gun is not a proper arm to put into the hands of the shooting fraternity.

But a newspaper is not bound to furnish brains for its readers. It must exercise due care in receiving advertisements, and in this respect must protect itself and its patrons It cannot, however, vouch for the honesty or business standing of all those who advertise goods for sale in its columns. Its readers, in treating with strangers who live at a distance must be governed by the ordinary and generally accepted rules of business. A capitalist in Boston does not buy a mine from a Colorado prospector without taking some measures to see that the property in which he is to put his money is really what it is represented to be. Why should a sportsman in Texas buy a dog from a breeder in Maine without inquiring as to the responsibility and trustworthiness of the seller. Every man who shoots has his own ideas as to what a dog should do and be, and scarcely any two men think alike on this subject : moreover, as few men understand how to handle a dog, therefore an animal which will work well before a good handler may be worse than useless to another man, whose experience or knack is less. Years ago we laid down for ourselves a rule from which we have never deviated. It was simply this: never to buy a broken dog without ourselves giving it a fair trial. We are willing to pay the express charges both ways, and to deposit the price agreed on with some reliable party, preferably the Express Company. If at the end of the time agreed on the dog does not give satisfaction it is returned, and the only loss we have suffered is that of the charges.

We sometimes receive complaints from persons who have bought dogs through advertisements in our columns, which do not satisfy them. Such persons are often themselves to blame for the losses that they have incurred. They have not taken proper precautions to guard themselves against loss and bad treatment on the part of designing men. In these days of express companies no man need part with his money before he sees the goods which he is buying.

Another point to which attention must be called, is the offers which occasionally appear to give something of great value for little or nothing. It would scarcely appear necessary to waru intelligent men against offers of this kind, but certainly the "fools are not all dead yet," and each one who sends his money thinks that he will escape being swindled and that the rest of the community will come to grief. have little charity for the people who are gulled by these transparent humbugs. They need a lesson of this kind. To all who are tempted in this way, we would say, however, be-ware of such traps; and if a man offers to sell a \$200 gun for \$20, don't buy it. There are philanthropists in the world, no doubt, but they have not yet been driven to advertising in the newspapers. They can find plenty of people on whom to bestow their favors without announcing it through the press. When the millennial day arrives, and some noble hearted sportsman desires to send to each bearer of the rod or gun, a \$35 split bamboo rod and equipments, a \$300 gun, a longrange rifle, and a thoroughly broken Faust-Keswick pointer, all for a three-cent stamp, we will agree that he shall have free advertising in Forest and Stream, so that the sportsmen of America may all avail themselves of the opportunity offered

In considering the advertisements offered us, we try to exclude all those which have anything about them which ap-

pears suspicious, but occasionally through misrepresentation or from some inadvertence advertisements may appear which should not have been admitted to our columns.

FOREST AND STREAM cannot answer or be responsible for casual advertisers in its columns or for those replying to such advertisements. We recommend our patrons, whether readers or advertisers, in doing business with strangers, to demand references, to have goods sent by express C. O. D., and in fact to protect themselves by all legitimate means. No one in these days expects a customer to buy goods, without inspecting them, and no one need feel aggricved at having an intending purchaser use reasonable business precautions in business dealings. Of course with a majority of our advertisers such precautions are unnecessary. The statements of established houses which have a standing in the commercial world may be implicitly trusted.

#### "SEALED CANS."

THIRTY-FIVE years ago, Sir John Franklin, with a company of one hundred and thirty-five men, sailed from England to attempt a northwest passage to the Pacific Ocean.

No survivor of that party ever returned. The mystery surrounding the fate of the expedition has never been dispelled. In the melancholy interest with which the clivilized world has not yet ceased to regard it, the Franklin expedition stands alone. It is the great tragedy of the North Land.

Attention has been newly called to the subject by the search expedition of Lieutenant Schwatka, who claims to have discovered in King William's Land relics of the Franklin expedition; and some of the cable dispatches received from England during the past weeks commenting upon these alleged discoveries are of the most startling and unexpected character.

Commander Cheyne, who was attached to one of the former search expeditions, charges that Franklin's men perished, not from Arctic exposure, but from starvation in short, not to put too fine a point upon it, that they were murdered by the contractor who furnished the canned meats for the expedition. The cans labeled "mutton" and "beef" contained, it is alleged, nothing but bones and offal. And when the official inquest is held upon the skeleton of one of the Franklin party, which is now on its way to England, Commander Cheyne says that he will reiterate and prove his charges against this contractor.

This, it must be confessed, takes away all the poetry from the Franklin expedition. If these terrible charges of Commander Cheyne can be proven, or if there is ground for even a suspicion that they may be true, the sympathy of the world for the victims will straightway be turned into indignation against the contractor.

The moral of all this is of nearer application than the North

Every man who seals a tin can, affixing his own signature to assure its genuineness, and then, prompted by his accursed greed for gain, and knowing full well that the possible consequences of his deception may cost human life, deliberately affirms that that can contains one thing, when he knows it to contain another thing, assumes in so doing a tremendous and awful responsibility.

It matters little whether his deception accomplishes its disastrons result among the green fields sought for pleasure or amid the wastes of an Arctic land; it is of little moment whether the true nature of the contents of that can be discovered at once or five or thirty-five years afterward.

------

Piseco. - It was once the custom when public officers had proved unfaithful to their trust, to banish them from their native land; in these days a happier custom prevails, whereby a term of cheerless exile is made a stepping stone to advanced rank. The Forest and Stream presents its best compliments to Commander L. A. Beardslee, late of the U. S. S. Jamestown, stationed at Sitka, Alaska, and now detached and on his way home to be examined for promotion.

Commander Beardslee's task at Sitka was one of some magnitude, the governing of a mixed population, made up of diverse nationalities and for the most part not accustomed to government of any kind. Something of the nature of this work may be inferred from the following clipping which is taken from the Oregonian .

The military expedition under Major Morris and Capt. Beardslee, was absent 15 days. They went as far as 59 deg, north lat., visiting all the principal Indian villages and holding andiences with the leading chiefs. They ascertained that three British canoes from Fort Sunpson, fitted out by the Hudson Bay company, had been to the sea ofter grounds in Alaskan waters; that a few ofter had been taken. These canoes escaped by an inside channel; otherwise Major Morris would have captured the outlit. The Hoonahs are much excited over this circumstance, and are ready for war in the event of their coming again. It is reported, and with good foundafrom that during the latter part of this month a fleet of sixty canoes, manned by King George Indians, will leave Fort Simpson for Cross Sound to hunt the sea otter. If this is persisted in war and bloodshed must be the result, for the Hoonahs, Chilicais and other tribes, who hunt these animals, are resolved to protect these grounds, cost what it will.

The situation is a very grave one. The United States has no vessel in Alaska which can prevent these incursions. The expedition of the Favorite was highly successful. The Indian tribes were taught by Capt. Beardslee what they must expect if they made war upon or kill white men. Major Morris instructed them in the customs laws and forbade their snungging. The Indians are now trading principally at home instead of going to Fort Simpson. Important hydrographic work was done by Master G. P. Hanus, United States navy. A large bay, heretofore uncharted, was discovered north of ley Straits, sunken rocks located, islands discovered, reefs surveyed, and other useful work done.

On giving up command of Jamestown and the charge of Alaskan affairs the returning commander received the rare compliment of being rowed to shore by commissioned officers who volunteered, and he left the ship under a salute of three cheers which were followed up as the steamer drew off by the same from the whole town assembled on its wharf to see him

Aside from his official duties, as his Forest and Stream Friends know, "Piscoo" has found time to pursue his natural history studies, and to amass a great fund of information about the country and its inhabitants. Some of this has already been published in our columns, and we have now on hand a series of letters which surpass in interest even those already printed. Considering only the interests of our subscribers, we are quite chagrined that Uncle Sam did not leave our correspondent in his cheerless abode of snow another winter, but for his own sake we may rejoice that "Piseco's" letters will hereafter come to us from a sunnier clime.

NEW YORK PROTECTORS.—The fact that our remarks in a recent issue relative to the selection of the new game and fish protectors have been widely copied and echoed by the press is a sufficient proof that the criticisms made were well grounded.

#### THE FISH COMMISSION

THE summer work of the U. S. Fish Commission at Newport is finished, and Prof. Baird and his staff have gone to Washington to work up the material obtained. It has been a most profitable season, both for science and to the fishery interests, not only of Rhode Island, but also to the Atlantic coast; for while the former will rejoice over new forms of fishes, mollusks and crustaceaus added to the fauna the fisherman will obtain a deeper insight into the habits, food and migrations of his prey, which will enable him to seek it more intelligently and with greater success. Fish Hawk will shortly leave for Wilmington and Washington, but it is not yet decided whether she will remain at these places all winter, or be sent to more southern waters to investigate and explore the fisheries and their many interests

The work on the Pacific coast has progressed favorably, and a correspondent writing from there says:

One of the best points about the United States salmon-breeding station on the McCloud River is the economy with which it has been carried on. It has now been eight years in operation—this is the ninth—and has turned out over 50,000,000 salmon eggs, and the entire expense for the eight years to the United States, including the salaries of all connected with it, has been less than \$70.-For this sum of money the establishment—the largest of its kind in the world—has been put in perfect order and run eight years. Two salmon hatching-houses have been built, and three dwelling-houses, besides numerous smaller buildings, have been crected. Out of this sum of money the Deputy Commissioner's yearly salary and traveling expenses for eight years, besides all the other salaries and other expenses for the same length of time, have been paid; over 50,000,000 eggs have been taken and matured; a very large portion of the expense of the shipping of the eggs has been paid, and a large trout-hatching house has been erected and put in running order. Salmon eggs were sold to the Eastern States, just before the McCloud station was started, at \$45 a thousand. This was the regular price. At this price the 50,000,000 salmon eggs turned out from the United States Ishery would come to the enormous sum of \$2,225,000. Those eggs have all been produced and a large number of them shipped East, and all the buildings and apparatus paid for, at an entire cost of less than \$70,000, net gain to the United States by the operations of this station, rating the salmon eggs at the old prices of 1860 to 1870, has been \$2,155,000, or forty-nine-diffictlis of the former cost of the same number of salmon eggs. It is doubtful if the United States Treasury record can show another instance where so much has been accomplished for so little money.

Of the investigations in connection with the census, under the direction of Prof. Goode, it is too early to speak, but it is gratifying to note that the press throughout the country appreciate the labors of the Commission, and in this connection we print the following editorial from the New York Herald;

At a time when newspapers and human heads are full of polities, the announcement that the Fish Commission has ended its summer

labors is hardly likely to cause a ripple of excitement, yet the truth is that the commission has done the country more real service within the summer than any half dozen prominent politicians combined. The head of this branch of the public service, with several of his assistants, has been steadily at work for several years in studying the habits of various fishes that are of commercial value, yet from one reason or another disappeared from our coasts, and the results, accomplished with so little blow ng of trumpets that not one person in a thousand has heard of them, have not only been the restocking of many of our rivers with shad and some of them with salmon, but have given abundant grounds for believing that the sea bass and the cod, once plentiful off our coast, but now very scarce, are likely to be with us again in great numbers. To the Fish Commission the country owes the information that our Southern coasts have tisheries-those for the mullet-that are likely to rival in importance any of the Northern The commercial importance of our fisheries is greatly inderrated; even the announcement of the immense price we paid Great Britain for the privilege of fishing for a few years in Canadan waters has not brought the people to a realization of the value of the "harvest of the sea." Like all other natural products the fisheries depend largely upon the intelligence of the fi The sea eron may be exhausted by had management as easily as an land crop. A few years ago the salmon fisherios of the Columbia River, in Oregon, seemed inexhaustible; two years ago the Oregon Legislature was frightened into an attempt to so regulate the season's work that the supply should not be exhausted; the depletion of the rivers in older States is a matter of long record. To prevent loss and to gain so much at a cost so little as the Fish Commission occasions is cause for congratulation.

BARNEM AS A FISH CULTUREST .- At the recent fair of the Suffolk County, N. Y., Agricultural Society, Mr. P. T. Barnum, the well-known showman, spoke to the people on agriculture and kindred subjects at the court-house at Riverhead, Long Island. Mr. Barnum said that he came more to hear what Messrs, Roosevelt and Blackford, of the New York Fish Commission, had to say upon fish culture, than to say anything himself, as he had seen them advertised to address the people upon that important subject, and he regretted that they were unable to be present, as he wished to learn what was done and how to do it; but as there was no prospect of having any fish-talk, he would give his experience in this didirection, which he did as follows:

"I had a nice pond on my farm full of pickerel, sunfish and other worthless species, and everybody advised me to kill them off and stock it with black bass; so I got men with seines, and dragged out all the pickerel, and put in two hundred fine black bass and left them alone for two years. friend one day said, 'Barnum, there are some other fish in that pond yet, and they may eat up all the young bass. saw one there the other day a foot long.1 So, as he knew all about this sort of thing, 1 let him manage it, and he caught quite a lot of them. I forget what he called them, but as they were very destructive to bass and first-rate for the table, he fished away, and sent me some occasionally, until he reported the last lot as being all that was left of them. they were going to the cook, a friend arrived, to whom I showed them and told the story, "You big fool," said he, those are your black bass!" And it was a fact; he had caught and we had eaten the whole lot, and I came here to night to learn how. I might keep fish and eat them at the same time

Justice to Dog-Killers, - We publish elsewhere from a Virginia correspondent, whose pseudonym will be recognized with pleasure, the story of how a dog-poisoner met his deserts. The story is literally true, and is of service as establishing the points shown. It seems to be very generally believed, even by very intelligent people, that there is no remedy in law against the malicious or wanton killing of a dog, on the idea that a dog is not property. A dog is not property in this-that a man cannot be convicted at comman law of ceny of a dog owing to the peculiar nature and habits of the animal. But the courts in Virginia have in several instances decided that his owner can recover damages for the wanton and malicious killing of his dog. This opinion being so prevalent the story may be of service to sportsmen in other States where the common law of England is the rule, as it is in Virginia, in bringing to justice and punishing that class of people who are not willing to respect the rights of their neighbors without the fear of the law to restrain them.

Size of Black Bass.-We have on several occasions expressed a doubt about the small mouth black bass exceeding the weight of four pounds. It is true we often had accounts of larger ones from correspondents whose veracity we had no reason to doubt, but then our skepticism was transferred from the size of the fish to the ichthyological knowledge of our informant, as the big mouth often inhabits the same water, and is so very often confounded with it. All doubts are now set at rest by Dr. E. Sterling, of Cleveland, Obio, who sends us a photografi of one caught at Long Point Reef, Kelly's Island, Lake Eric, on Oct. 16, 1868, which weighed six and a quarter pounds! The picture shows the fish to be remarkably stout, as though full of eggs or gorged with fish, its depth being contained in its length nearly three times, and the question may arise whether or not it is fair to record the weight of a fish when so filled. The season in which it was caught is not the ordinary spawning time for this fish, but specimens have been found full of eggs at fully as late a period. Even allowing a half a pound for these extras, there still remains enough to give it precedence over any Micropterus salmoides which we now remember as being upon record,

Dr. Sterling has also sent us photos of Lake Erie catfish, to which we will refer again; the pike-perch or wall-eyed pike, and of the "lake mullet" (Mysostomu aureola), all from plaster casts made by himself.

THE SAW-DUST ARENA .- The next six-days' walk will begin in London, Nov. 1. Several English competitors will walk, and America will be represented by three men, one of whom is a negro. In accordance with the preconcerted plans of "the management," one of these Americans will win, and the Astley belt will come to America. By regularly alternating the victories, the sagacious backers of these hippodromes are successful in maintaining for their contests enough of the "international" character to attract the entry fees and betting stakes of the great unwashed. We could wish that the managers would find it to their interest this time to let the belt remain in England. That would be a consummation devoutly to be wished for by all decent men.

### The Sportsman Tourist.

HUNTING IN MONTANA.

A chill, sad ending of a dreary day, The wanny light in stillness dies hway: Bequeaths no ray of hope the void to fill, But lends to gloomy thoughts more sadness still.

CUCH were my thoughts as I crouched among the reeds and rushes of a little stough, one day last March. It DULI were my thoughts as I cronched among the reeds and rushes of a little slough, one day has March. It as cold, cloudy; and I had been there all day watching for atterflow with little success, as my bag up to that time was uly two geese and five mallards. As I repeated the lines to yeelf I was preparing to return home, when I heard the militar and pulse-quickening. "Hould honk," of a flock of seese and presently saw they were the seese and messally saw the seese and messally saw they were the seese and messally saw the seese and messally saw the seese and messally saw the seese and messally saw the seese and messally saw the seese saw the seese and messally saw the seese and messally saw the seese saw the seese and messally saw the seese and messally saw the seese saw the seese and messally saw the seese saw the seese and messally saw the seese saw the seese and messally saw the seese saw the seese and messally saw the seese saw the seese and messally saw the seese saw myself I was preparing to return home, when I heard the familiar and pulse-quickening "Houk! honk" of a flock of geese, and presently saw them coming straight toward the slough. I did not allow then to light, but, just as they were about to, I let both burrels of my No. 10 Webbey into them, and dropped three. Before I had time to gather them up, along came some mallards, and I got five of those. Then came a tremendous large flock of little teal, and changing my coarse shot for a couple of charges of No. 8, I dropped mine of them. Then a flock of geese, brant and mallards charged at me, and were repulsed with a loss of four of their number. In fact, I was kept busy loading and firing till dark, my last hird being a fine large swam, which I dropped with a charge of BB. So my day's sport ended finely after all, and next morning I sent the wagon up for the game, and found I had killed thirteen geese, eight brant, seventeen mallards, thirteen eak, five ducks, which I do not know the name of, and one swam, making a total of fitty-seven head, which I call a pretty large bag for two and one-half or three hours shooting.

But waterfowl is not the only game here by any means. Antelope can be seen any day by riding three or four miles from the house. At this time of the year they are not banded together in large number as they are in the fall and winter, and are exceedingly hard to approach. I was securing about on the pariir the other day with an Indian, and we ran over a little band as we turned the point of a ridge. The Indian immed of this lorse and killed four before they could familiar and r

ter, and are exceedingly hard to approach. I was securing about on the prairie the other day with an Indian, and we ran over a little band as we turned the point of a ridge. The Indian jumped off his biorse and killed four before they could get out of range of his Winchester. I never eared to hunt antelope—in fact, could never find any sport in it; and to me the meat has a very strong, disagreeable taste.

The timbered bottoms of the river—the Marias—are full of white-tail deer, and the "cooleys," which run out in the prairie, shelter a fair sprinkling of black-tail, sometimes called mule deer. It is with the former, however, that I have the most sport. I have an old Indian mare which I ride when hunting them, and I am sure she enjoys the sport as much as I do, for she will poke along through the brush, keeping a sharp lookout, and when site sees one she will stop of her own accord. I remember one day I was hunting with her in the bottom below here, and when passing through a little thicket of cherry and builberry brush, she stopped all of a sudden, and although I pressed my spur against her side shwould not move an inch. Well, I looked and looked, and saw nothing, and was about to give the old beast a good spurring, thinking she had fooled me, when about thirty feet to my left I saw a little fawn standing staring at me. I immediately gave it my compliments in the shape of nine large buckshot. Another time I scared up a doe and two fawns, dropping the doe and one facared up a doe and two fawns, dropping the doe and one fawn with a right and left, while the cher ran off a little way and stopped. Slipping off my house, a lerge up within range, and killed him also, making three deer in about as many minutes. I always use a shotgun to hunt then, and seldom fail to get the lose fair shot alnorse, I crept up within range, and killed him also, making three deer in about as many minutes. I always use a shotgun to hunt them, and seldom fail to get a close, fair shot, al-though I often mise; but, like all hunters, I do not care to tell about the misses. Of all foodish animals that walk on four feet I think the

tell about the misses.

Of all foolish animals that walk on four feet I think the black-tail deer the most foolish; unless the wind is in their favor, a person can nearly walk over them. I have heard men tell of standing in one place and killing a whole band. In fact, when we were "out to buffallo" last winter I saw an Indian clean up a band of seven, shooting from one position. They prefer to stay in a broken, hilly country, where are great high-cut banks and deep cooleys. There is such a place about the unlies from here, and I often go out there for a little sport. I killed a buck there one day which I think would have weighed, dressed, over 225 pounds. He had a very very large pair of antlers, but, like all black-tail, they were irregular and devoid of beauty.

About thirty miles from here, looming up in all their grandeur, are the snow-capped peaks of the Rocky Mountains. There can be found, mingling with one another, every species of game there is on the North American continent—Mountain sheep; girzuly, cinnanon and black hear; panthers, wolves, lynx, swans, geese brant, ducks, prairic chickens, grouse, etc., enough to satisfy the wildest dreams of any sportsman.

Then the streams are full of trout, and the larger and decent.

sportsmam.

Then the streams are full of trout, and the larger and deeper-lakes have plenty of salmon in them, especially 81. Mary's Lake, where it is said salmon have been caught weighing fifty pounds. After the rainy season I intend going up to Chief Mountain and 81. Mary's Lake on a hunting expedition. As it is impossible to get unong the game with a wagon I shall take an Indian along named Enuckiyu. He is an A No. I indian; has a large new lodge, plenty of horses to pack the plunder; and last, but not least, three strong women to do all the work. The expenses of the trip would be nothing, and good saddle horses can be bought for \$20.

Alas! the skeletons which cover the prairie are all we have left to remind us that thousands of bulfalo used to roam about here. But I am happy to say that I have killed a few of them before they become extinct. This winter I was over in the Judith Basin for several months with the notorious Indian trader Jon Kipp, who was trading for robes and pel-trees with the different tribes of the Blackfoot Nation—Picgans, Bloods and Blackfoet. The average cost of a good robe was about \$1.75, and us he traded for about 2,000 robes, he will clear between six and seven thousand dollars.

Indian trader Jon Kipp, who was trading for robes and pettrees with the different ribes of the Blackfoot Nation—Pic-gans, Bloods and Blackfeet. The average cost of a good robe was about \$1.75, and as he traded for about \$2,000 robes, he will clear between six and seven thousand dollars.

The buffalo were about thirty miles from the Post, and as I had no other way of going I accompanied a camp of Picgans; the like an Indian, alcot like an Indian, and found it not very bad if ving after all. I had heard a great many stories about running buffalo, how dangerous it was, etc., etc.; but when we had arrived on the ground, and one time morning started out for a run, immediately I saw the buffalo I forgot all about the danger, and was as carger as any one to be in the lead. Seeing a little band running off to the right I let the impatient horse go, and was soon pumping cartridges into them with my Winchester carbine as fast as possible, and at the end of the run found I had shain seven. But instead of shooting choice cows like the Indians, my buffalo were of nearly every age and sex. What dancing and feasting there was roasted and caten was astonishing, and it was kept up every night till we started back to the Judith.

The Indians and whites in this country are all armed with the Winchester gun, the Indians mostly using the '66 model carbine, and the whites the '066 or '13 model rifle. Any other kind of gun is seldom seen, there being no sale for them in the country. An attempt was made in Fort Benton last summer to introduce the Burgess gun, but three or four of them burst, and one man had his arm shattered, and to-day they could not be given away.

In your issue of March 11 I notice an article on the "Unfrequented Regions of the Adirondacks," by Albert Cornish, in which he says: "The first week I was there I heard a catanount scream regularly every morning about 3 o'clock." Now, I would like very much to know what kind of a noise were in Auctored. These men, Sheppard and Arnold, have been panther hunters from boyhoo

Upper Maria's River, Montana Territory.

PROVING A DOG-POISONER'S GOOD CHARACTER.

A BOUT the latter part of August, in the early part of the last decade, the writer and eight or ten friends went on a deer hunt in Rockbridge County, Virginia, near Goshen, on the Chesapeake and Ohio Railroad. We were placed at different points on the Calf Pasture River, opposite the long ridges leading to the top of the mountains, down which the deer came to water after being run by the dogs. The driver started in the mountain with the dogs about sunrise, and I had waited at my post until eleven o'clock without hearing or seeing anything that indicated the approach of a deer. I was standing immediately upon the bank of the river—one of those limpld mountain streams so clear that you can see the smallest pebble in the bottom of the deprest pool—watching the little minnows playing about in the water, when suddenly I heard the bay of a hound in the direction of the woods. Secreting myself behind a large poplar tree, I looked out in the direction of the sound, and soon a tremendous buelt leaped the fence about 150 yards from me, into a tobacco patch, and headed right toward me. I stood perfectly still, cocked my ride, and waited breathlessly for him to jump into the water. But he came not; and becoming impatient and uneasy at the delay, I peeped again from my inding-place, and to my chaggin saw his back as he glided down a washedout place which ran parallel with the river, about half way between where he jumped the fence and my stand. I watched him, with my gun to my face, until he came out of the "wash-out," about one hundred yards below me. I fired, and at the crack of my gun he dropped, but soon recovered him, self and run about one hundred yards when the report of a shot-gun, and the excited yell of a member of our party, left no doubt that the had been secured. I immediately went to the spot and found that my friend had shot him dead within a few feet of where he stood, and the noble hound was happing the blood as it poured from the innuense hole in his side.

While we were debating about the best disposition A BOUT the latter part of August, in the early part of the

He replied that he hardly reckoned he would undertake to

He replied that he hardly reckoued he would undertake to do such a thing right before our eyes, and rote off. He was scarcely out of sight when this very old man and a son appeared, guns in hand, and stood around the deer, talking of the long chase, the splendid dog, etc., complimenting ac at the same time on the shet I had made with the rifle (which had cut the right horn clear off about half an inch from the skull), and then turned their attention again to the dog who was lying in the gap close by. After a little while I saw the old fellow—Dayis by name—quietly pull his hand

out of his breeches pocket, and, as a bny shoots a marble, shot something like a chunk of dried beef from his fist into the gap, right at the nose of the dog. As he did so he turned to his son, made some remark about going back to the house, and started rapidly away, followed by the boy. The instant I saw the notion made by him in giving the dog the object, whatever it was that he had in his hand, I made a spring at the dog, but found I was too late to intercept him. He had gotten whatever it was and had swallowed it. I instantly informed my companion of what had happened, and remarked to him, "That's a dead dog!"

About this time we heard our dogs running in the mountain, and I hastened back to my stand, charging my friend to keep right by the dog, which he promised to do. In about half an hour I heard the dog whiting and making a good deal of noise, and knowing that as long as he did so there was no chance of deer conning to either of us, I hastened down to where the dog was. Just as I reached him he turned over on his back and had a severe spasm which lasted a minute or two. I instantly recognized the unmistakable signs of strychnine; then another and another spasm followed, and in ten minutes he was dead as a door nail. He had hardly given his last kick when his owner appeared, and I told him what had happened and what I had seen old Davis do.

I never saw a man so crazz with anger in all my life; he rowed he would go to Davis' house and kill him, but after much persuasion he was induced to listen to reason, and said he would go to Matever I advised. Whereupon I advised him to go to his camp and get one of his lawyer friends (there being several of that profession in his party, Governor Letcher among (hem) to bring suit against party, Governor Letcher among them) to bring suit against Davis for this wanton killing of his dog; and we all promised thin that, cost what it would, we would attend the trial and give our evidence against him. Davis was notoriously stingy, although a man of good property, and I tho

organ.

All the evidence for the plaintiff, Mohler, was heard, Governor Letcher and other distinguished counsel appearing for him. The courtroom was crowded with spectators eager to him. The courtroon was crowded with speciators eager to hear this singular case. After resting the case for the plaintiff the defendant, Davis, was put upon the stand, and denied the whole thing, and swore that he never poisoned the dog in question nor any other dog in his life. Then his counsel, Colonel Moore, called the next witness, Mr. Wilson, one of the most intelligent and influential farmers in the country, who was a near neighbor to Davis. His examination was

who was a hear neighbor to Davis. The examination was about thus:
Counsel for Davis: "Mr. Wilson, tell the jury how long you have known Mr. Davis, your opportunities of knowing him, and what sort of reputation he bears among his neighbors as a citizen, neighbor, etc."
Witness: "Have known him thirty or forty years; live very-near him. Mr. Davis is a good citizen, and a kind, hospitable neighbor; stands very fair in the community in all his business relations, etc., etc."
Col. Moore's countenance beamed with satisfaction, he looked defiantly at Governor Letcher and complacently at the jury. The Governor raised his spectacles and looked very blandly at the witness:
"Mr. Wilson, do you know Mr. Davis' reputation in your neighborhood as a dog killer t if so, please tell the jury what that reputation is."
Here a little wrangling took place between counsel about

there a little wrangling took place between counsel about

Here a little wranging took place between counsel about the propriety of the question, but the Court permitted it.

Mr. Wilson, a little embarassed: "Well, sir, I think I know
Mr. Davis' reputation in that respect."

"Well, sir," said the Governor, impetuously, "what is it?"
Wilness, reluctantly but distinctly: "Mr. Davis, sir, has
the reputation of having killed and poisoned more dogs than any
man in Virginia."

Take your seat, Mr. Wilson!" and the Governor turned round with the most withering look at the Colonel: "Any more character witnesses, Colonel? If you have, trot 'em

nore character witnesses, Colonel? If you have, trot 'em out.'"

A hasty consultation between the Colonel and his client followed, during which the audience indulged in a hearty laugh at their expense. Presently another witness was called, whose name I do not now remember, and the same answers. After three or four hard been examined, with the same answers. After three or four hard been examined, with the same results as Mr. Wilson's testimony, the Colonel announced that he was "through," to which the Governor laconically replied, "I would suppose you were." The case was given to the jury after short argument, in which Governor Letcher produced the most convincing authority that the law of Virginia protected a person in the enjoyment of his property in a dog as well as any other species of property, and the Court so instructed the jury. In a few minutes after retiring the jury brought in a verdict of \$154 damages to the plaintiff for the dog, which carried with it the costs—by this time swelled to a considerable sum by the frequent postponements and the distance which had been repeatedly traveled by the numerous winesses, all of whom claimed their milage and attendance every time. every time

every time.

Thus ended this cause celebre by which the doctrine, that the law of Virginia will protect the owner of a valuable dog from the nadice and meanness of dog-skyers, was freely announced and publicly vindicated by our Court. The only cause of complaint we had was inadequacy of the damages allowed by the court of the co

cause of complaint we had was inadequacy of the damages allowed by the jury for the dog. He was one of the handsomest specimens of the fox hound I ever beheld, and had run that deer from five o'clock until after eleven, on a hot August day, over the roughtest of mountains, and was in sight of him when he was shot.

\*\*Representation of the properties of nefarious practices.

Davis' favorite mode of operating on dogs was to———But I ought not to tell this; for old dog poisoners ought not to be taught new tricks.

Staunton, Va.

### Aatural History.

THE FOOD OF THE DARTERS.

PROF. S. A. FORBES, who has been doing such good work on the food of birds and fishes of Illinois, has been investigating the gastronomic tastes of those little fishes of the family Etheostomide, or "darters," which are found in most all small streams, and attract attention from the most casual observer by their singular mode of progression on the bottom, and which gives them their popular names of "Johnny darter," "sand darter," etc. Prof. Forbes publishes his observations in the American Naturalist for October, and begins by saying:

ber, and begins by saying:

"What the humming-birds are in our avifauna, the 'darters' are among our fresh-water fishes. Minute, agile, beautiful delighting in the clear, swift waters of rocky streams, no group of fishes is more interesting to the collector; and in the present state of their classification, none will better repay his study. Notwithstanding their trivial size, they do not the present state of their classification, none will better repay his study. Notwithstanding their trivial size, they do not seem to be dwarfed so much as concentrated fishes—each car-rying in its little body all the activity, spirit, grace, complexity of detail and perfection of thish to be found in a perch or a 'wall-eyed pike.'"

His observations were based upon a study of the contents of seventy stomachs, which represented fifteen species, collected in all parts of the State, in several months of four successive years, which he considers to fairly exhibit the food of the whole family at different seasons in twenty-nine localities, as the different individuals, taken at the same date and locality, agreed so closely in their food that the study of two to five gave all the facts obtainable from more fishes. The "sand darter" (Pleurolepis) is comparatively rare in Illinois, as there are few sandy streams. Seven stomachs were remarkably uniform, containing only the larva of small diptera and Ephemerids, eighty-one per cent. of all being larva of Chironomus, a guat-like insect, twelve per cent. larva of other diptera, and seven per cent, of May-flies,

Twelve specimens of the genus Alcordias\* exhibited

\* The classification used is that of the second edition of Jordan s "Manual of the Verichades." seventy-five per cent. of May-flies, and the remainder was larva of dragon-flies and Chironomus; while twelve specimens of the genus Belcosoma varied only the appearance of fifteen per

cent. of case, or caddis worms (larva of Phryganeida). Other genera differed but little, perhaps with the season, until we come to Percina caprodes, which showed a preference for a crustacean diet by containing "thirty per cent. of Entomostraca and three per cent, the smallest of our Amphipoda, Allorchestes dentata (Smith), Faxon. Most of the Entomostraca were Cladocera, including Daphnia, Eurocercus and Daphnella.

"Here occurred the only instance of molluscan food in the group. One specimen had taken a few individuals of Ancylus rioularis, Say. Reduced ratios of Chironomus and Ephemerid larva, and a few *Corixa tumida* complete the list. "Last and least comes Microperca punctulata, represented

by nine specimens from four localities in Northern Illinois. This smallest of the darters shares with Percina, the largest, the peculiarity of crustacean food, which made up sixty-four per cent. of the total. The principal kinds were Cyclops, Chydorus, young Gammarus fasciatus, Say, and young Crangonyx gracilis, Smith. The remaining elements were Chironomus larvie (thirty-four per cent.) and a trace of Ephemerids (two per cent.).

Ephemerids (two per cent.)."

"It will be seen that the family, taken as a whole, divides into two sections, disringuished by the presence or absence of crustacean food. This is casily explained by the fact that Percina and Microperea range much more freely than the other genera—being frequently found among weeds and Alga in comparatively slow water with muddy bottom, while the others are rather closely confined to swift and rocky shallows."

Prof. Forbes plainly shows how these small fishes are only fitted to dwell in the smaller streams by keeping down their size, while, at the same time, they are by their habits able to hide from enemies under stones, and live in a current so strong as to require great muscular power to stem it, but which they avoid by hugging the bottom in the neighborhood of sheltering stones, and he concludes by saying:

"Perhaps we may, without violence, call these the mountaineers among fishes. Forced from the populous and fertile valleys of the river beds and lake bottoms, they have taken refuge from their enemies in the rocky highlands where the free waters play in exessless torrents, and there they Lave retuge from their enemies in the rocky inginands where the free waters play in ceasicless forments, and there they have wrested from stubborn nature a meagre living. Although diminished in size by their continual struggle with the elements, they have developed an activity and hardihood, a vigor of life and glow of high color almost unknown among the easier livers of the lower lands."

Ornithological Work in the West Indies.—A new bird is reported from Mr. P. A. Ober's recent collections in the Lesser Antilles, making the twenty-second new species obtained by him from that region. It will be described shortly by Mr. G. N. Lawrence, who has identified and described all the new birds of former collections. It is a species of Icterus, and has been (provisionally, at least) named in honor of its discoverer, the Icterus Obert. Besides this new species there are among the specimens many rare and unlooked-for species. The notes relating to them will probably be published (as heretofore) in the "Proceedings of the National Museum." The types of all the new birds discovered by Mr. Ober are in

the Smithsonian Museum, and likewise a full series from each island of the Caribbean chain of the Antille

With the material now on hand, Mr. Ober has at last ac-complished the object of his three-years' labor, and is enabled to fill a gap which has until now existed in our ornithological knowledge of the West Indies. Maynard's "Birds of Florida," Cary's "Birds of the Bahamas," and Mr. Ober's notes on the birds of the Lesser Antilles, constitute valuable additions to our exact knowledge of avi-fauna of the South, extending over twenty degrees of latitude.

It is a matter of congratulation that the United States has received the benefit of the explorations of these young naturalists, especially as most of them have been carried on in islands owned by other nations.

English naturalists have noticed this, and, while regretting the fact that their own collectors had not availed themselves of these rich fields, have given our American workers their full meed of credit.

#### BURRS AND BURRS.

THAT one is never too old to learn is a saying as trite as it is ancient, yet every now and then in one's experience some occurrence will bring the truth of this aphorism before our minds as strikingly as if it were a new idea. Especially is this the case when we find, as sometimes happens, that we have for years, perhaps from childhood, attached a wrong meaning to some very common word. The shock which a man feels when by some accident his blunder is revealed to him, is a severe one; and the thoughtful person is by such an occurrence taught more than ever to distrust his own ideas of things, unless they are founded on an absolute knowledge of facts, and to guard himself well against expressing too decided Such reflections as these are apt to occur to a man after he has been worsted in a controversy, because one of his premises was wrong, or when he has written a telling es say which was to reform the world and demolish his adversaries, but in which his facts were not facts at all but assumptions. We should none of us be unwilling to acknowledge our ignorance. No one man can know it all.

We feel bound to confess that our ideas as to what constitutes the burr of a deer's horn have been apparently all wrong. In a recent article in the columns of a contemporary the author, speaking of a discovery by Prof. Cope in relation to the burr on the horns of certain Pliocene deer, marks the word burr with an asterisk and adds as a foot-note the following truly luminous sentences:—"Burr or buhr stone—A nearly pure siliceous rock, in which calcareous and other matters originally forming part of it has (sic) been parted with and be come replaced by silica, so that the cast of fossils are perfectly preserved in it. See Ruschenberger's Natural History Vol. II. p. 29, of Glossary."

The information thus conveyed while most interesting to the non-scientific reader will impress itself no less on the paleontologist who learns now for the first time that the antiers of the deer of the Pliocene were ornamented with "nearly pure siliceous rocks in which calcareous and other matters originally forming part of it, has been parted with, and be come replaced by silica, so that the casts of fossils are per feetly preserved in it." Just fancy how odd the deer must have looked with these great lumps of rock on their horns, though perhaps, after all, the lumps may not have been large Ruschenberger's Natural History does not tell us that. And how strong the animals' necks must have been to have sup ported this great weight: what an enormous development of the ligamentum nucha must have taken place to support this weight, as well as of the other muscles of the neck. Wo con fancy that the Pliocene man, if with Prof. Whitney we accept his existence, must have had a decidedly exciting time in an encounter with a wounded deer whose antlers were thus furnished. What chance would the man of to-day have if a cartload of rocks were hurled at him, each individual stone moving at the rate of a charging deer. How would any of our readers like to withstand the charge of a deer with a millstone about his neck? No doubt when the supposed Pliocene man did succeed in killing a deer, whose horns were adorned with this "pure siliceous rock" he carefully preserved the head, and taking it home had it mounted by a good taxidermist, and then hung it in his hall or dining-room, and the east of fossils perfectly preserved in the nearly pure silice ous rock" unquestionably added greatly to its beauty. the Pliocene man had friends to dine with him, he no doubt called their attention to these points in the horns, and told the story of the hunt, with great eloquence, but with becoming modesty. We had a vague idea that the antlers of the living Cervida were furnished with burrs, but we presume that we were wrong. At all events, although we have killed in our day a good many deer and elk, we have never found one in which there was to be seen anywhere on the antlers any "nearly pure siliceous rock, in which calcareous and other matters has (sie) been parted with and become replaced by silica, so that the casts of fossils are perfectly preserved in

Truly we live and learn.

A Young Gunea Fowl.—A correspondent, "H. H. C.," of Bristol, Conn., sends us for identification a "quail" shot near that place by Mr. Everett Horton. There were six of the birds together, and they were feeding with a flock of chickens. When they flew up one was shot, but Mr. H., thinking that they were young turkeys, refused to shoot any more of them, not knowing what they were.

The one sent us, which is little less in size than a quail, is a young guinea fowl.

John Krider's Collection. -During a late visit to Philadelphia, we stopped in to see our veteran friend, John Krider, corner-Second and Walnut streets, and were shown his grand collection of bird skins and eggs. Without attempting to enumercorner Second and Wahmu streets, and were about the plection of bird skins and eggs. Without attempting to enumerate their great number, and what he has, we may state that he has 729 to 750 varieties of skins and eggs, ranging from the eagle, hawk, owl, woodpeckers, warblers, fly catchers, shrikes, buntings to water birds, both waders and ducks, and a complete assortment of game birds. Truly his collection is an interesting one. We found Uncle John in the midst and a complete assortment of game birds. Truly his collec-tion is an interesting one. We found Uncle John in the midst of arsenic, scalpel in hand and a beautiful woodduck before him which be was skinning. Our old friend has written and published a little work entitled "Forty Years Notes of a Field Ornithologist," in which he gives a brief sketch of every bird he has himself shot and whose eggs he has collected.

Mobe Quall Bred in Confinement.—Catskill, September 27.—Editor Forest and Stream.—Some two years ago I brought from the West quite a number of quail, and in the spring I turned out all but two pair. The two hens which I prought from the west quite a number of quality and it in spring I turned out all but two pair. The two hers which kept laid over fifty eggs, which I set under bantam hers and forty-five hatched out. I had then all in a yard, but on day I took them into the kitchen, and the door being left ope-I lost most of them. After I took the eggs from the quali on day I took them into the kuchen, and the constitution of the hens had hatched out twelve fine young ones. Last spring one of the boards got off from the coop and I lost all of them, old and young. I had left fifteen eggs, and these I set under a little hen, and eight hatched out. They were very fine strong birds, and were nearly grown, when one night the rats got in and killed them all. I leave for the West soon, will bring more quail home with me, and will try once more. I think I can raise them without any trouble.

B. F. CONKLIN.

POINTS IN THE ANATOMY OF SNAKES.—In a recent lecture upon "Snakes," by Prof. Huxley, at the London Institute, the speaker called attention to some peculiar arrangements in anatomical construction and jaw-hones, in illustration of the anatomical construction and jaw-bones, in illustration of the fact that the snake cannot be properly said to swallow its food, but seizes hold of it, gradually working it down its throat at its leisure. For this purpose a fully developed and effective saliva aparatus is required. The poison bag of the venomous snakes is nothing but a modification of the salivary glands of the harmless reptiles. There are instances in which they are almost identical. Another instance of the close relationship was shown in the fact that the sharp channel needle by which the poison is conveyed is nothing more than a development of the tooth which dangerous reptiles possess in common with harmless ones. The fact that the salivary line of the control of the tooth which dangerous reptiles possess in common with harmless ones. The fact that the salivary a development of the toots which dangerous reputes piecess in common with harmless ones. The fact that the salivary gland was the poison receptacle of venomous snakes and ani-mals affected with rabies appeared to Prof. Huxley to point out the direction wherein lies the solution of the problem of snake poisoning and a possible antidote against it.

SOME HARITS OF THE SEAL .- The following extract, taken from one of the letters of the New York Herald's Arctic Correspondent, conveys some novel information in regard to the habits of the seal :

The female seal in the early spring builds a The female seal in the early spring builds a habitation in the snow over and around the hole through which it breathes, and here its young are born and live until old enough to venture into the water. This house is called an oglow, and is constructed very much like an Esquinau igloo in shape, though it is more irregular and has ramilications that extend to neighboring holes. These oglows are found with the assistance of dogs, as previously described, or by prodding with a seal spear the hillocks of snow that look like seals' houses. When a hunter finds an oglow during the season that the young seals are living in them he inmediately breaks in the roof with his heel in search of the little one, which usually remains very quiet even when the hunter looks down and pokes his head through the broken roof. The young seal is then easily killed with the spear and draggred out on the ice. pokes his nead inrough the orotal root. The young sea then easily killed with the spear and dragged out on the and the hunter waits for the mother, which is never abset long time from its baby. 'The young seal is generally open as soon as killed and its little stomach examined open as soon as killed and his little stomach examined for milk, which is esteemed a great luxury by the Esquimaux. When young the seal is covered with a long white hair, very much like coarse wool. This skin was at one time very much used in making clothing, but lately has not been much in vogue among the natives, though occasionally coats and trousers of this material may still be seen. The whalers esteem it highly as an adjunct to woolen clothing, as being sufficiently warm for those who are living on shiphoard, yet not so warm as reindeer clothing, which becomes oppressive in high temperature.

Food of Snakes.—Sing Sing, N. Y., Sept. 24.—One day this summer I was fishing on a bridge that crosses the Croton River near Sing Sing, and I noticed a commotion in the water where I had some perch on a string to keep them fresh, when I saw a large water snake trying to get one of the fish off the string, and after waterhing his efforts for some time I killed the snake with my fish pole.

OLD FISHING ITEMS.—In looking over the files of the Republican Waterbinan, of Greenport, Long Island, for some special information, we came across the following items which we thought worthy of putting upon record. The dates in parenthesis are those of the issue of the paper in which they ere found :

were found: (Mny 20, 1875). Large quantities of menhaden have been caught by the fishermen during the past week, some of the gangs taking 100,000 or over in a single day. Although of fair quality the fish do not yield as much oil as their appear-

Fair quality the fish do not yield as much oil as their appearance would seem to indicate.
(May 20, 1875).—The Stonington Mirror says that during the past month over 100 tons of fish were shipped to New York each week from Noank.
(Oct. 9, 1875).—Mr. Blackford says the amount of fish used in the cities of New York and Brooklyn in one day, say on Friday, is as follows: Haddock, 200,000 lbs.; codish, 20,000; bluefish, 15,000; striped bass, 2,000; fresh mackerel, 20,000; halibut, 100,000: Spanish mackerel, 2,000; refrigerated salmon, 9,500; miscellaneous fish, such as butterfish, weakfish, etc., 25,000 lbs. Lobsters, 100,000 lbs.; 200 gallons of scallops; 200 dozen soft crabs; 1,000 lbs. green turtles for soups and steaks.

steaks. (Nov. 27, 1875).—According to the Express, Capt. Benj. C. Payne, of North Haven, Sag Hurbor, on 50 acres this year grew 5,100 bushels of corn, worth 40 cents per bushel, \$2,040, and 100 tons of stalks, worth, at \$8 per ton, \$800—in all \$2,340, manured with fish serap. Capt. Payne and his son dilbert have also carried on the rendering of oil from menha-

den, having tried out 7,500,000 fish, from which they ma 27,529 gallons of oil, sold at 40 cents per gallon for \$10,008, and have on hand 800 tons of scrap, valued at \$10,400.

(May 13, 1876)—On Monday porpoises having driver vast body of menhaden into Mattituck harbor, the Cost Fing Co., of which Andrew Cox is captain, made a haul witheir scine (one and a quarter miles long), and enclosed drew to land not less than 800,000 of the fish, most of where very fat. Parmers have since been busy carring to away to place on their fields as manure. This is the large catch ever made at that place, but at other points on the per bay hauls of 1,000,000 or more have been made in fem years.

SPEARING FISH ON SPAWNING BEDS -Rochester, Sept. 1 A great deal of damage is done by the farmers and living in the vicinity of our inland waters by spear while they are on their spawning beds. The fish con the shallow water and on the shoals to cast their spaw while they are on their spawning beds. The fish come the shallow water and on the shals to east their spawning are easily seen and speared at night by the sid of a jacke Large numbers of salmon, trout, black bass and other fished at time, above all others, when they should be alone. The last thing a farmer would think about doing? be to kill his sitting hens. The result of such a course be no chickens, and a continuation of such a practice soon externinate them. This rule applies to fish as w fowls. The salmon, trout and white fish cast their story of the such that the surface of the salmon, the salmon that the sal

FAILURE OF THE OYSTEL-SPAT IN HOLLAND.—A curpondent in Holland writes us as follows: "I have been an expedition trip to the Zuder-Zee on account of the syand winkels. I was only three weeks there, and if I have assurance what fishing in breeding time can do I had found there. In all that time, by careful looking over all than net brought up, I have only been able to find two spatistics and this is an excellent year for spat. When sever will be restored we can commence by closing the fishentical forms of the statement of the sta entirely for at least five years.'

BLACK BASS IN PECONIC RIVER.—At the recent fair of BLAOK BASS IN PECONIC RIVER.—At the recent lair c Suffolk County (N. Y.) Agricultural Society, held at Head, Long Island, Mr. H. D. McGovern exhibited his man earp, gold fish and black bass, and at the close o exhibition he very generously donated the bass to the pby placing them in the Peconic River, where they are known. The earp attracted much attention, and wer left there to stock some ponds.

CARF IN COLORADO.—The carp which were distributed Colorado last December are reported as doing well, and 3 W. E. Slsty, one of the Fish Commission, has just finished distribution of the second lot of mirror carp which were ceived from Prof. Baird.

ALEWIFE CULTURE.—The Belfast (Me.) Journal says: large number of alewives are passing down the fishing Penobscot River from the spawn put in Sebago Lakour fish commissioners the past season."

CATFISH TAKE THE FLY.-We are informed in a privi letter from Mr. J. H. Dinkins, Fish Commissioner of Tee that a party of gentlemen while casting the fly in the Parces ales, a stream tributary to the Colorado, caught two catis This, we think, is the first recorded instance of any of family taking a fly. Now if it had been a mouse which 60 took we could have had a chance to show, by a short true " reasoning, how the relations between cats and mice on is have developed a similar state of affairs between the latterari the water cats, but as the facts will not permit it in this as it may then be in order to consider if cats, recent or pre-historic, ever did catch flies. A careful examination of the scriptions on Cleopatra's needle, now in New York, fulls reveal anything which might be twisted into a confirmation of this proposition:

SILVER BASS.—We have received a letter from Mr. Raver: Wattel, Secretary of the Societe d'Acelimation, Paris, 80,05; that about three years ago the Societe received from his Begg, of Saggsboro, near Orilla, Ontario (Canada), a few ver young fishes which he called "silver bass" and said were go fish, grew rapidly to a large size, etc. The fish were about three inches long and are about twice that length now. but as they have been kept in a small tank it is probable that they have not reached their full size. Mr. Wattel writes us to know what they may be, but we are not familiar with the name, which, Prof. Jordan tells us, is applied both to the riped lake bass (Roscus chrysops) and the river moon-eye olom), and we therefore ask such of our friends as may appen to know what fish is called "silver bass" in parts of mada to give us their other names—scientific ones, if possible that we may inform our friends across the water of the true one and character of their fish.

the correspondent says that some of them spawned last tugnet in a little pond, and that there are now thousands of pely fry on hand, but as they have no knowledge of their anits, character or needs, they besitate about stocking the pers with them. He writes: "Our fishes are elegant; ay have the power of changing color instantly, and have a as purple spot near the extremity of the operculum. odv is proportionately short and thick, the belly large, the nomb small, and the upper jaw shortest.

It is possible that it may be one of the worthless "sun-fish" " pond-fish," but that is, of course, only guess work, and we prefer to hear from some of our readers who know the

A HIST FOR MENHADEN FISHERS .- The fact that the herring o getting scarce-or, at least, is considered worthy of some sort of protection on the other side of the Atlantic-might be favorably considered by our menhaden fishermen, to whom such a thing as giving the fish time to breed has been entirely mknown, or, if known, unpracticed, while they complain of ac yearly decrease of their prey. On this point the Northern Energy says, in speaking of it, the great quantity of immature berings sent this year to the German markets, both from the West and the East Coast of Scotland, has revived discussion on the desirability of instituting a close time for the herring "The opinion," says the Northern Ensign, general that damage is done to the regular fishing by breaking in upon the shoals when they are forming in the early part of the season; and it is this view of the question which chiefly presses home upon the fishermen as most specially affecting their interests. Then, in the second place, it is only too well known that barm is done to the market by offering as the first fruit of the fishing season an unripe inferior article, which the buyer rejects as soon as he gets something better, and which is apt to depress the tone of prices after the superior commodity has arrived." Commenting on this the London Field remarks: "Fishcurers and fishermen, it is believed, would acquiesce in any reasonable arrangement, and one contemporary suggests that the close time should extend on the West Coast from the beginning of April till about the 20th of May, and on the East Coast from the beginning of May till the middle of July."

Ren Snapper. - A "red snapper," Lutjanus blackfordii, was caught off New Jersey last week, an extreme northern point for this fish to visit.

### TROUTING IN WEST VIRGINIA.

NOVEL MODE OF ANGLING.

stream of all this region for large trout. At the point near Wardenville, they found the water milky and in first-rate condition.

Big trout were jumping in all directions, but not one would touch fly nor any buil. My moss-tramping friend, believing they could be circumvented by patience and art, determined to devote the day to them, while his companion proceeded upward, whipping the stream, secondant artem. But all his devices proving vain, in despair he laid his rod down with a live minnow resting on the bottom, and took out his pipe for consolation. In a few seconds he saw his line violently shaken, and giving it the fatal twitch, he drew out a twelve-inch trout. He repeated the operation, sometimes with live minnows and sometimes with cut bait, and he caught, thus fishing on the bottom for trout, sisteen, none under a foot, and one seventeen inches in length. When his companion returned from his fly-whipping up stream, troutless and disgusted, and was confronted with the sixteen golden beauties and informed of the process of capture, he exclaimed indignantly: "I could not have them on those terms." Yet he forthwith went to bottom-fishing himself; but too late—the trout had quit feeding.

The next day the same party struck the stream (Trout Run) some seven or eight miles higher up. Bad luck attended all their carly operations, and disconsolate, they threw their live minnows on the bottom, and sought confort in the pipe and tickler, when a lucky thought struck a native angler, who was one of the party. "Vou see that spring," soil he, "coming in at the head of the pool: I will go and muddy it and see if that won't make them bite." No sooner said than done. In a short time the riled water made its appearance, and immediately the lines were shaken. The result was twenty-six trout over twelve inches in length. On the following day, at the same place, the same experiment was tried, with a result of sixteen trout of like proportions.

I am vulgarian enough to prefer bass-fishing to any troutfishing I've ever known—certainly to trout-fishing on the bottom, whatever the results.

One fact is clear and constant, that the trout in the moun-

tom, whatever the results.

One fact is clear and constant, that the trout in the mountains of Virginia and West Virginia prefer black crickets, grass-hoppers, black bugs and minnows to the fly, and in Trout Run, Conroy's most artistic fly with reversed wing will cast its shadow on the water in vain. And another fact equally certain, is that Mr. Seth Green's cast of eighty-six feet would be a uscless accomplishment in all this mountain region. With high reaching laurel and overhanging boughs, the angler will be lucky to make a cast (he length of his rod. One of the trout had in its stomach eleven locusis (17 year), four bugs resembling. June bugs, one grasshopper and one

One of the trout had in its stomach eleven locusis (I'v year), four bugs resembling June bugs, one grasshopper and one minnow, and was taken by an earthworm or lentile. It would be satisfactory to know (if the cause is general) why muddy water prompts the fish to feed. Does it whet the appetite, or is it the apprehension that the water may become too muddy to find food, and they prudently lay in a store in anticipation of an enforced starvation? This would imply ory and reason; but fish may have more sense

memory and reason; but usn hay have more sense the
some people suppose.

All this region abounds in game—deer, wild turkeys an
pheasants in profusion, with now and then a bear or wo
and catamount.

Shenando.

""Grees" in Fish.—There is a point relative to bass fishing and cooking which I would like to ask the opinion of Dr. Henshall, G. A. S., of Chicago, W. E., of Chicago, and others who know the fine sport these fish give, the following questions: "Do the bass they take have worms or grubs under the skin? Are these grubs injurious to persons eating the bass?" We are prompted to make these inquiries owing to a diversity of opinion among some fishermen and naturalists, who were camped up in the woods during the summer. They fished one lake and caught some big fellows. They took them to camp, cleaned and skinned them, when some big grubs as large as maggords came out of the tiesh. Some moss-

took them to camp, cleaned and skinned them, when some big grubs as large as maggots came out of the tiesl. Some moss-backers told them that bass having these grubs were unfit for food. They tossed them into the lake, and pretty soon some fish crows found them and carried them off.

These fish were caught in an inland lake fed by springs, but the water was warmer than the water of Lake Michigan, hence the grubs were said to exist from this cause.

Another day some of the party visited a Lake some miles from their camp that is noted for its fine bass. They caught some good ones and carried them to camp, seven miles, expecting to have a feast free from grubs, because the water was colder and the lake a large one fed by many springs and rivulets.

rivulets.

The fish were put into n spring of cold water (ice-cold), left until morning. When they dressed them they were hard and firm as though they had just come from the water. They found in them the same grubs, about the same size, and when put under a microscope exhibited the same form and manner as the grubs taken from the base caught in the warmer water of the small lake. The party varied their trout fishing by these occasional days after bass, so another day tried the large lake connecting directly with Lake Michigan, and where bass are cangula of large size.

bass are caught of large size.

They expected something good from it, because the fish feed on minnows and lawe abundance of cold, clear water. Their flesh is firm and sweet. The fish themselves are gamy as one could wish, fighting to the last and running up to 4 pounds in weight, but when dressed and skinned the same grubs appear.

I need not say every one in camp felt some compunction in

grubs appear.

I need not say every one in camp felt some compunction in cating them, though the fish were all one could desire when well cooked, yet these grubs were the interesting theme while in camp. Possibly, had the party made less pretense of being scientific, those bass would have been voted splendid; but when these big fat grubs rolled out as large as a wheat grain every one felt some queer sensation in the region of the stomach, and the standing joke was, "How many of those fine fellows did you put away for breakfast this morning?"

We would like to know something of the experience of gentlemen who have taken bass through the many lakes in the Northwest, if this has been their experience, or are these grubs peculiar to the Michigan lakes, where so many of us spend our summer fishing holidays.

I trust I shall not take up too much of your space in asking the opinions of others concerning these parasites, "if such they are."

W. D. T. Whenon Sept. 25.

they are." *Chicago*, Sept. 25.

### FISHING IN MINNESOTA.

FISHING IN MINNESOTA.

A CORRESPONDENT of your journal, in the issue of Sept. 9, states that Lake Tetonka is said to be the best fishing ground in the State. Now, I do not wish to dispute the gentleman's statement, but he wants to tell of something more "fishy" than a string of rock bass averaging nearly a pound to sustain his statement. Besides this, he says they were filled with parasites, and it isn't likely that many persons would eat fish illed with these animals; so they are no better than so much carrion, and I think he is in the wrong when he makes his statement on the superiority of that lake as a fishing ground. If he has traveled through Minnesota, and found nothing better than the aforesaid to tell, he is extainly most unfortunate. Heretofore, we have never told of the rock bass that we catch here, but have considered them as amounting to very little in comparison with our larger and finer varieties. But while we are speaking of rock bass, we might mention the two-pounders and over, that to catch is an everyday occurrence. I have seen rock bass of that size snap at the hooks before they would fairly touch the water, and it would take a much longer time to detach the fish than to hook them. I myself have often caught black bass that weighed 4½ pounds, and I know of reliable parties that acught them weighing six and seven pounds, and even higher than that. The fish bite well on the trolline hook and by bait, and I have no doubt that they would take the fift well if given the chance.

Perhaps I am mistaken when I say that Detroit has the

best fishing of any locality in the State, but I will try to sustain my statement, and give a few results of fishing excur-

ons.

One that I took myself in the early spring is especially One that I took myself in the early spring is especially vivid in my mind. A party of three, embodying myself, started down the little stream, known as the Pelican, about 1 r. M. A ride of about twenty minutes brought us to Muskrat Lake, and although we had never fished here nor heard of rat Lake, and although we had nover fished here nor heard of anybody having done so, we concluded to try the place as an experiment, and we soon came to a standstill. Before I had thrown my line my fellow fisherman had landed a fine rock bass. I soon followed with another; then we both secured others, and here I lose all recollection of the order in which they came, as fish after fish came tumbling in, black bass, Oswego bass, rock bass, pike, pickerel, perch and sunfish, and—I must not forget—one "bull-bead." After wd had caught some forty fish we lifted anchor, and proceeded down the stream until we came to Lake Sally, a beautiful sheet of water about twelve miles around, and here we struck a temporary camp and prepared a lunch. While the other two representatives of our party of three were preparing and frying the stream until we came to Lake Sally, a beautiful sheet of water about twelve miles around, and here we struck a temporary camp and prepared a lunch. While the other two representatives of our party of three were preparing and frying flsh I stood on the bank and soon landed another dozen fine fellows, among which were a fine pair of Oswego bass weighting over four pounds each. After eating our lunch we proceeded to return, and soon nerived at Muskrat. Lake, where the other two decided to walk back while I took the boat. As I was passing over our first "battle-ground" the temptation was too great, and I decided to again try my hand at them, and was soon hauling then in at a lively rate. About the fifteenth fish I decided that I would carich inventy-five before leaving, but unfortunately on the twenty-first fish my look broke at the barb and left me in rather a peculiar position, as I had no other about me. I did not give in, however, and after throwing about a dozen over the boat I succeeded in landing the four necessary to complete my quarter hundred, and started back and arrived at T v. M.—six hours fishing—with the following result: Twenty-one black base, fifteen of which weighed on an average of four pounds; fifteen pick, whose weight I did not test, but which were extraordinarily large; thirty rock base not "weighing nearly one pound, and filled with parasites," but large, tine fellows, some of them tipping the beam at over two pounds; three pickerel; two Oswego bases; one sun-fish: one perch, and one buil-head or mud trout. In all these must have weighed upward of two hundundred pounds.

Two other parties, Drs. Carman by name, caucht cighteen.

Oswego bass; one sun-fish; one perch, and one buil-head or mud trout. In all these must have weighed upward of two hunhundred pounds.

Two other parties, Drs. Carman by name, caucht eighteen Oswego hass in Lake Sully in two hours, all with a common spoon trolling hook. They averaged four pounds. A. E. Bowling and R. E. Metealf took a drive to Floyd Lake one afternoon and caucht twenty-eight black bass, several of which weighed six pounds. Mr. Amos Bowman, of St. Louis, Mo., and a brother, of Marshall, Mich., started out on Detroit Lake one day, and soon returned with a half barrel filled to overflowing with some of the finest specimens of the finny tribe that ever mark eyes fell upon. We might go on mentioning other fishing experiences of this kind, but we think we have sustained our statement on Detroit having the best fishing in the State, and if any other enthusiast doubts the same we would be most happy to hear from him, and we will give him our hand in fellowship, agreeing on one point, that there is no place like Minnesota for a person to get his fill of fish.

II.

A STRANGE CATCH. - Highthorn, N. J., Sept. 27.—On Friday last I was pike-fishing with two others on Outcall's pond, near Spotswood. When we went ashore for lunch at moon we left one pole sticking in the mud bank of the channel. On this pole was a line with one wired single hook. It was in plain sight all the time and no one went near it until our return, when we found on it two pike, one about twelve ounces, strung through the gills: the other about a pound, looked in the jaw. The first pike had evidently taken the minnow and hook and ejected them through his gills. The second pike, hooking binself, had drawn the line a foot or more through the gills of the first. This kind of a double catch was so strange that I hardly dared believe my eyes, but being a notary I at once took the affidavits of my companions, Messrs. Frederick Farr, and James Scudder, of Crambury, to the truths of the facts as above stated. Is it not rare?

New Sporting Grounds—Tumorith, Ond., Sept. 25.—If am here in a, so to speak for the sportsman, new country. About thirty miles north of here is a beautiful chain of lakes, and Ishal, during the next week, have a fair view of them and send you a description, which will probably prove interesting to your readers. I have not succeeded in getting a maskelonge that I wanted for comparison of teeth and vertebre between pike and maskelonge. Believe me, the latter are not as plentiful as is generally believed.

V.

FOR FLORIDA. -It is frequently the pleasant privilege of Forest and Stream to extend acquaintance among gentlemen sportsmen, and in this interest we are called upon to say that a gentleman, a journalist by profession, who with his wife spent last winter in Florida, is desirons of meeting one or two other couples who would like to go to the Gulf coast or South Florida the coming winter, and spend one or two months in gunning, fishing, and having a good time generally. Correspondence is solicited that references may be exchanged and a congenial party organized; and any letters sent to "Scribe," care of this office, will be promptly forwarded.

CANOE AND CAMERA.-Mr. Thos. Sedgwick Steele, the author of "Canoe and Camera," the most elegant sportsman's book of the year, is now on a tour over part of the routes described in that volume. In a note written just before he

scribed in that volume. In a note written just before he started, Mr. Steele says:

I intend to follow the old course of my book, "Canoe and Camera," until I reach Chamberlain Lake, when instead of turning South into the East branch of the Penobscot as before, I shall follow a northerly course to Eagle and Churchill Lakes and turn east into Spider Lake. From this point through Echo Lake, Osgood Carry, to the Mausungan lakes the passage is difficult, all depending on the state of the water, but the latter lakes once reached, a pleasant and easy passage is open to the Aroostook waters, landing one at the fown of Caribou, Maine.

Col. Lyman B. Goff, of Pawtucket, R. 1., was the first tourist to nake this trip, in Sept., 1879, and he will be my companion this year. For the last few weeks I have been practicing with a new camera called a tourograph, and I must confess that I am perfectly delighted with it. No knowledge of photography is necessary, the plates being

furnished all prepared, and the work being perfectly mechanical. I shall take eight dozen plates into the woods, and hope to return with a good idea of the Aroostook country.

"Bay birds" generally, including various species of plover, sand-piper, suite, curious, owster-catcher, suit-bird, phalaropes, avecets etc., coming under the group Limacole, or shore birds. Many States permit prairie fowl quimared grones shooting after Aug. 18.

### LARGE GAME AT THE WEST.

WE publish below from the London Field a communical tion from the pen of Mr. W. D. Pickett, whose frequent communications to the Forest and Stream have always secured an appreciative reading among sportsmen of intelligence. Mr. Pickett's long life in the country of which he writes, his practical knowledge of the game inhabiting that country, and his general information on all points of the subject under discussion attach a more than ordinary claim for attention to his views. The question of how efficiently to protect the large game animals of the West is one of very great import ance, and it is one, too, which is likely to be neglected untiit shall be too late to provide a sufficient remedy :-

his yiews. The question how entertaily to plottee the large game animals of the West is one of very great import ance, and it is one, too, which is likely to be neglected untified with the large that is the large and of the weekers as a sportsman, with all kinds of game, more especially for the last four years with the large game of Montana and Wyomine, has led me to infer that most of the useless slaughter for which sportsmen are responsible is done by the novice in each class of sport, whether suipe or clk. When thrown with game he is not accessomed to hunt, he appears esized with that inherent love of killing, commen to all men as a rule, and not particularly creditable to "man," on the supposition of his being "the violest work of God." He is probably also enthused with the ambition of making a big bug, and so comes the slaughter, providing he is sufficiently skillful. When the novelty of the sport wears off he calms down, loses the desire for prantisenous killing, and then squares back on his dignity,—and is ready to pitch in and criticise the many who are sure to follow his pernicious example when temptation comes. This holds true especially with large game sport, and it is not safe for one who has not been thrown among an abundance of large game to criticize too severely those who are more formate, and shoot off their gun too often. From a humanizarian point of view, it is fully as reprehensible to kill useless by the smallest sparrow as the noble clk, and it is well for all of us to keep virildy in our mind's eye those grand words, "Lead us not into temptation," and "Let him that is without sin cast the first stone."

However true the above any be, I do not believe the quantity of large game in Montana and Wyoming has been affected by the anount killed for "sport" or for purposes of food. This opinion is entertained by others equally competent to form an opinion. The natural increase of these animals more than almost as much as the leaden article, yet rebound harmlessly from the noble ferros of the dear

tion of the Indian, there is no question of the wisdom of this nolicy.

As regards elk, mountain sheep, deer and antelope (the only real game animals), the question of their preservation is a serious one. Early last fall, deer and antelope skins rose in price to 20 cents at the trading stores, and last spring they were 30 and 35 cents per pound; elk, 15 cents per pound. The consequence has been that every unemployed man in these tricories, unless too remote from rail or river transportation, who could raise a rifle and had slight skill as a hunter, was out "hunting for skins" for several months during the winter. Those unable to buy the outfit were "staked" by the small traders. Moreover, the winter was unusually cold and stormy: the fomperature receding in successive old spells to 55°, 28°, 20°, and 32°. The rold winds dove the antelope and buffalo from the plains to the north into the Yelowstone Valley, in bands of thousands, and the storms and deep snows in the mountain drove the elk, mountain sheep, and sheep low down into the same valley, so that there were unusual facilities offered for their destruction, as will the more readily

appear from the following facts obtained from Walter Cooper, gun and fur dealer of Bozeman, during a recent business trip down the Yellowstone, and from information since from agents. His estimate of the Killing, up to the beginning of March, was as follows: 10,000 butfalo killed by Indians, 7,000 butfalo killed by whites, 30,000 deer and antelope, 3,000 elk. By multiplying four-iffths of the buffalo by 400lbs, the deer and antelope by 50lbs, and the elk by 300lbs, those interested in food statistics will obtain the total pounds of food destroyed. This is only one district.

On the Missouri and in the country toward the U. P. road the same destruction went on, though it is to be hoped not to the same extent. These figures appear large, but are not much to be wondered at when the facility with which the antelope and elk, half benumbed with cold, are killed, and which would be here described did space permit. From twenty to fifty antelope per day is not an unusual score for a skilled and athletic hunter. Huddled loogether in the gullies, the hunter, usually armed with Sharp's rifle, by firing into the mass, kills two or three at a shot. There is a pretty authentic record of one man killing (his partner following and skinning) seventy-eight in one day, and six hundred in one month.

month.

The writer for several years past has been the patient listener to every luge bear and lumning story that has been floating around these mountains for the post fifteen years, and flatters himself that, by an almost daily habit of separating the wheat from the chaff he can recognize the genuine article, and yet thinks from the source of information the above

datters himself that, by an almost daily habit of separating the wheat from the chaff he can recognize the genuine article, and yet thinks from the source of information the above stories are substantially correct.

Is there no law to stop this destruction? There is a territorial law protecting game after the 1st of Pehruary; and I believe altogether if not killed for food. The destruction was greatest previous to that date, but continued until the break up of winter, when the buffalo and antelope scatter on the balins, and deer, elk and sheep return to the mountains. Unless the price of skins goes down to the figures before mentioned, the same story will be repeated during the coming winter. Even were these persons to inform, it would require a regiment of cavalry to make the arrests. This destruction is carried out as a menus of living. Many of the men are miners, who work hard all winter to make a "stake" to continue their prospecting operations during the sammer, all hoping to strike their "bonanza." A few do, but the many repeat the same routine for years. I heard of two miners of this class a short time since who were offered \$100,000 for one lead. Another party actually sold one lead for \$50,000.

And so it goes, the success of one encouraging the flagging spirits of the many. I have rarely known this class of mentil an elk or deer for the sake of killing, and except for food—it is too old a story—there is no templation.

In conclusion, Americans, and especially American sportsmen, are always glad to see British sportsmen. In spite of the startling statistics above given, in the language of John Smith, the lumoratal razor-strop man, "There are a few more left of the same sort." Good sport can be had in these mountains for at lest five years to come. Bear and mountain sheep are perhaps more alumdant than in any other part of the Rockies, are not affected by the arts of the "skin hunter," and afford the finest sport of all game animals.

The British sportsmen who have visited Montana and Northwest Wyoning

### GAME RESORTS ABOUT TORONTO.

GAME RESORTS ABOUT TORONTO.

AVE just returned from an excursion to Canada, where I went for some shooting as well as the trip, which was pleasant in the extreme. Toronto was the objective point from which I would go out into the surrounding country shooting, or on the lake fishing, and generally return at night. Very good duck shooting can be had at a small shallow bay called "The Marsh," within a mile of the city, to which anyone can direct you, where Captain Bill Laing holds forth, and rents hoats and decoys for the moderate sum of 50 cents per day, with full directions as to the best place to locate, etc., gratis. Still better shooting can be had on some of the lakes north and east of the city, where wild rice, that ducks love to feed on, grows in profusion. Mr. Rawbone, dealer in guns, amminition, etc., on Yonge street—a thorough gentleman and ardent sportsman—would, I am sure, be glad to direct any one a stranger there, as he did me, to good localities where game can be found.

The Muskoka District, about eighty miles due north, is noted for its good deer-shooting. Each year parties from Toronto go up there with all the paraphernalia for cumping out—though board, hounds and guides can be hired very cheaply—and stay two or three weeks, generally meeting with good success, and feeling well repaid for the journey. The open season did not commence this year until October I, though I heard of parties killing them in September.

Any one wishing good rabbit shooting would do well to visit Mr. Henry Spears, at Georgetown, about thirty miles west of Toronto. He keeps a large kennel of fine hounds, and is ever ready to take a hand in the sport. His table, a model of cleanliness and liberality, is calculated to suit the most fastidious. The Canadian bumy differs considerably from our hare, inasmuch as it is larger, and turns white in winter. The season opens September 1, though later on when the cover is not so thick, say toward the latter part of October, is the best time. In fact, that applies to nearly everything

White.

Board can be had in Toronto for about fifty per cent. less than in New York. At private houses six dollars brings excellent accommodations, and I have been told that for three and a half dollars per week one can find comfortable quarters. The hotels charge about two dollars per day; among the good ones being the American House, which is kept by an American, and is handy to all the railroads and boats.

I will give you a brief sketch of the route I took to Toronto I will give you a brief sketch of the route I took to Toronto with the attending expenses, which may be of interest to some of your readers. Took the six P. M. train at the foot of Chambers street, on the Erie to Niagara Falls, fare \$9.25 for single ticket; borth \$82 extra; stopped at Buffalo for break-fast—75c.—at eight o'clock next morning. Arrived at the Falls about ten, and spent the rest of that day there and the next night. Stopped at the Spencer House—\$2.50 to \$3.00 per day—thence by C. & H. R. R., next morning to Lewiston where connection was made with the steamer Chicora for Toronto. Through ticket from Niagara Falls to Toronto \$1.90. The sail of about hirty-five miles across Lake Ontario is very pleasant when the weather is fine, but when the wind blows pretty strongly the sea gets choppy, and basins and blows pretty strongly the sea gets choppy, and basins and lemons are at a premium. The steamer arrives in Toronto at half-past two in the afternoon, occupying about two hours in

half-past two in the afternoon, occupying about (wo hours in crossing.

A person with three weeks' vacation can make the round trip from New York for about seventy dollars, including a stop-over of a day at Niagara Falls, which should not be missed. Seeing the Falls by electric light at night is alone worth the money the whole trip costs. I was just a little short of twenty-four hours on the road coming down from Toronto, which shows that not as much time is wasted, as most people suppose, in going and coming. Persons going with the view of shooting should not start until late in October, as I said before. I was there in September, and though I had some very fair duck shooting, was on the whole rather disappointed, being a month too early. Attended the Industrial Exhibition, with which I was much pleased, but was too late for the dog show, which I hoped to see, and intended making the principal solpiet of this letter. New York, Oct. 8.

### PHILADELPHIA NOTES.

W. E have about reached the close of our rail shooting season, the cool nights of the past week having had the effect of driving the birds further South. Yet some fair "beats" have been reported during the last run of afternoon tides. One of the Messrs. Sartori, with Benny Badger to push him, killed on upper Thicum fifty-six birds, on a morning tide, in excellent condition. These late stayers are invariably fat and lazy.

Teal duck of the blue-winged variety have not been known the stayer for more than the property layer for more consense.

invariably 1at and 1a2y.

Teal duck of the blue-winged variety have not been known to be so pleniful in the Delaware River for many seasons as this, and we learn of good shooting last week at daybreak during the morning flight of the blue-wing.

Next week will usher in our quali season, and many are the trips already planned for a first crack at this prince of game birds. Your correspondent is still firm in his opinion that the open season for quali shooting should not begin until November 1, and intends to wait until the birds in this section are over their running proclivities, and devote his time to woodcock and the ruffed grouse in the Lehigh Valley and thereabout, making his first trip on the 13th of this month, when an account will be given to your readers.

Is it not unfortunate that the Philadelphia Sportsmon's Club, or, as it was latterly called, the Philadelphia Game Protective Association, has virtually gone out of existence? The charter has been retained, however, and a few of the leading spirits occasionally call a meeting when any important subject bearing upon game protection is desired to be discussed.

scussed. Nothing is ever heard of the Philadelphia Kennel Club.

leading spirits occasionally eath a meeting when any important subject bearing upon game protection is desired to be discussed.

Nothing is ever heard of the Philadelphia Kennel Club, which gave such a grand bench show shortly after its organization. We doubt if there ever appeared at any show such a great display of setters as at this, and it is hoped a second may be held under the same patronage.

The great improvement in our native breed of setters, owing to the importation of the best English dogs during the past few years, and the consequent introduction of this blood, may be readily noticed on our streets by the lover of the canine race. At least one-half of all the setters seen following at the heels of their masters show the unmistakable form, in part, of the improved strain. This, mincled with the rugged, study old native dog, seems to give us precisely what is wanted for our varied shooting.

Your correspondent was informed of a very novel shoot indulged in by a triend a week or two since—that of killing our common sora rail over the point of his setter. While in quest of sulpe in the meadows near Darby Creek, he found his dog continually stopping and pointing stiff on the margin of the numerous ditches intersecting the low piece of ground he had found. Upon kicking in front of his dog's nose what he supposed would be tound a monse or a sparrow, he put up rail after rail, and in this manner killed thirty or forty well conditioned birds. I fail to see, however, what benefit a young dog could derive from such work, and should imagine a too frequent indulgence in it would turn out a first-class "poke." What think you?

It may interest some of your readers to learn of a successful case in the treatment of a dog for the ordinary round worn, on the part of the writer, during the past few weeks. The animal in question was a medium-sized Scotch terrier, belonging to a gentlemen who knew nothing of the diseases to which the canine race is prone, and in answer to my questions whether his dog was given to cattin

THE CHOKE BORE POWDER.—We have recently had some tests made of the new Dupont Choke Bore Powder, and the results are such that we can recommend it to sport men as a very excellent explose. In the tests made it was compared for cleanliness with one of the standard rifle powders and was found to compare favorably with it. The pattern and penetration made were excellent, and the powder, as a whole, is a very good article for use in any guns, but especially in choke bores.

### DUCK SHOOTING AND DOG BREAKING.

T HAVE just returned from our marsh club grounds which

He on the Lake Eric between what is called Ward's Canal and Crane Creek and is said to be the best mallard and black duck grounds on the lakes.

I found our keeper and his wife, just settled in their cosy quarters and our rooms all in readiness, bunks all made and a fire in the stove, and dimor was on the table when I arrived. I spent three days ducking over the marsh, mostly laying a company of the store, and the spent three days ducking over the marsh, mostly laying and the spent three days ducking over the marsh, mostly laying and the spent three days ducking over the marsh, mostly laying and the spent three days ducking over the marsh, mostly laying and the spent three days ducking over the marsh, mostly laying the spent three days ducking over the marsh and the spent three days ducking over the marsh. out work for the men, clearing the differences from the pond holes and getting boats, set poles, oars, etc., in time for our be the sporting begins in carnest which will be any out differ

ing out work for the meh, clearing the different channels from the pond holes and getting boats, decoys, set poles, oars, etc., in time for our boys, when the sporting begins in carnest which will be any day now that we have a heavy north-easter after a couple of cold, frosty days. I shot a few ducks each day at morning and night flights just to keep my appetite level and get my hand in on the gun. The teal season is in fts glory and as fat as butter, wish they would keep long enough to send you a pair or "prices," as our Dutchman here calls (term "Oh ! yaw he caught size pieces" he says, if I got six ducks.

I must tell you a dog story, even if it is my own; but you will pardon me I know when you know it is my "Ned," the specked English setter that his "Lordship" Massarene liked so nuch and wished to take home with him. I took Ned out one evening in the boat to try him on retrieving ducks for the first time. A couple of malfards came up with the wind and dead ablead—one with right, and one with left. Right bird, dead; left, winged. Both dropped in the thick rice and mud bed. I saw he marked the dead one and I saving "Dead bird of fetch," he jumped tile boat and got it, as if used to it all his life. I then petted him, and sent him in for the wounded one, as near as I could tell where it fell. He hunted a while, and could not find him. I urged him on, and by-and-bye he commenced going round in an open space. I knew the bird was buried and hiding, so I ordered him to dig it out. And he began at the grass and mud and it flew, and so did the bird. or rather jumped out—but the dog had to dig so deep, all I could see of him was his back and tail first. Well, after chasing a yard or so, he got him and brought him in. The next day I wen of the proposed start in a fler him when he struck I knew from the began at the grass and mud and it flew, and so did the bird. or ather jumped out—but the dog had to dig so deep, all I could see of him was his back and tail first. Well, after chasing a yard or so, he got him and broug

### CORNFIELD DUCK SHOOTING ON THE RIO GRANDE.

To is seldom that the average sportsman has an opportunity to complain of too many ducks, but during the "duck season" here in winter, they are certainly too numerous for real sport, though just right for the "pot-hunter." But taking the season between June and October, when the "winter ducks" are north on their breeding grounds, and when we have but one species here, the \*Deudrweggnu\* autumnatis\* of authors, or the "cornfield duck." of the natives, then is when the true sport comes in. Suppose we take a trip to-morrow morning—the reader and myself—and we will see what we can get. There is no rushing about at two o'clock in the morning, a hasty breakfast and a five-mile drive or so, as is often the case in the East, but we get up leisurely—everything is done leisurely here—have our coffee, and before breakfast we will leave for the field, which is no further off than three gun-shots. Arrived there your first exclamation will be, "Why, this looks like an old cornfield turned into a meadow. Here is quite a lake, and there are pools of water everywhere, and where there is dry ground the grass must be a foot or two high—and where are the ducks. I can't see one." Well, we have just had an overflow in the river, and when it receded it left this lake, and this year the flood came so quickly that it drowned most of our crop, and so this field is a perfect paradise for the ducks. You must remember that the habits of the conflield ducks differ from those of other ducks: they never light right in the water, but shough they are here and pulling the lusks from the ears and having a glorious feast. But hark! do you hear that loud, clear whishe? and look! there is a pair justs barely in sight. So loud and clear is their whishe, which is almost continually kept up, that it can be leard nearly as far as they can be seen—you can hear for yourself that it has not the least resemblance at all to the "quack" of most ducks. T is seldon that the average sportsman has an opportunity to yourselt that it has not the least resemblance at all to the "quack" of most ducks. Now, listen and hear the ducks that are already feeding answering them; a pair here, a pair there, in fact they are scattered all around, and the beauty of it is they are only in pairs; seldom will there be more than two together while feeding. But here is the pair we heard first.

We can hardly call them handsome, but what showy birds they are! with their long reddish necks, with exceedingly long white legs and feet, that reach out so far beyond their tails; and then that white patch which covers most of the

tails; and then that white patch which covers most of the upper side of the wing, contrasts very well with the color undermeath, which is black; and there, they have lit! We will start in here anywhere. We are sure to strike some. See! there go a pair the first thing. You never dreamed you were so near any. And how pretty they rise out of the tall grass, keeping close together and rising well om ot the fair grass, sceping close together and rising well up from the ground. Here goes for a double. If you killed both, all right; if neither, why, better luck next time; but if one, you will very likely get a good shot at the other as it comes back flying high in the air to take a last farewell look at its unlucky mate.

But our shot has started every duck within a hundred

at its unlucky made.

But our shot has started every duck within a hundred yards of us. There must be twenty in the air. Some of course, will leave the field, but most of them will settle down again. Even if they should all leave others will keep arriving, and so the sport continues as long as we care to keep it up, or until the sun gets too hot for us to stand it longer.

But these docks are poor eating. They are never fat, and do not begin to compare in flavor with our fine mallards and teal in winter, and one will soon get tired of them for the table.

A. M. F.

### ECHOES OF THE "DITTMAR SPORTING POWDER."

Editor Forest and Stream:
Belleves, Med., Oct. 40. "Thanks for that "Dittnar"
repose; think I will not invest in it; was going to try it up
North on particleyes. C. H. Catro, Ga., Oct. 4.

Editor Porest and Stream:

I am glad to see that you have taken up the Dittmar Powder and have given the sportsmen of America a little light on a subject which certainly needs it.

A. W.

Philadylphia, Ort. 10-Editor Forest and Stream PHILADELPHIA, Ord. 10—Editor Forced, and Stream—You have done nobly in knocking down that absurd fraud, Dittmar powder, and you deserve the thanks of every sportsman in the country; please except mine now, and believe me truly

Manchester, N. H., Oct. 7.

Editor Forest and Stream:

Editor Forest and Streem:

Please find inclosed four dollars to pay for the Forest and Streem to May 12, 1881. Being an old man, and being unable to follow my favorite pursuits of hunting and fishing. I had concluded to discontinue the paper, but the articles on the Dittmar powder and its manufacture have pleased me so highly that I forbear. I hope the public, and especially the sportsmen, will "read, mark and inwardly digest" these articles for their enlightenment and safety, for we have had enough of the imposition.

[Respect Process Mayor The following supers to be supersoned by the control of th

enough of the imposition.

A. G. D.

Holyding Deer in Maine.—The following comes to us from a responsible source, under date of Mopang Lake, Washington County, Me, October 4:

A week ago a professional gaide and hunter arrived at this lake to put the camp in order for the reception of Bangor sportsmen (?), who are now almost daily arriving with hounds to shangher deer contrary to law. The bringing of hounds in covered carriages, secreted from sight, indicates fear of the law and its penalties, or, it may be, a sense of shame. Of course, in due time, the venison will be sent out under cover of darkness, as usual. The county warden has been notified, and, let us hope, will take prompt means to vindicate the law.

The Maine law provides that "no person shall hunt, kill or destroy with dogs, any deer or caribon within this State, under a penalty of forty dollars for every such caribon so killed or destroyed." We have already taken occasion to highly commend the efficiency of the present commissioners of fish and game, Messry. E. Stilwell, of Bangor, and Everett Smith, of Portland. As these parties referred to by our correspondent come directly from one of the centres of authority, we shall look for the speedy detection, conviction and punishment of the offenders.

PACIFIC COAST. NOTES.—The game resources of their respective localities are acceptable found only beside.

rett Sintin, of Portland. As these parties reterred to in our correspondent come directly from one of the centres of authority, we shall look for the speedy detection, conviction and punishment of the offenders.

Pacteric Coast Notes.—The game resources of their respective localities are a never-failing fund to the Pacific coast paragraphers. The Sacramento Bre man has been out after equal, but he reports only eats: "While quail shooting near Folson, recently, we saw a common house-cat out in the woods several miles from town, and were informed that they are numerous in the foothills, where they live in a wild state, subsisting on birds, etc. It is said that they are very destructive to broods of young quail, and the sportsmen shoot them whenever possible." We commend to his attention the article on the subject lately published in this journal. Another complaint which we find in the same paper comes from a correspondent in White's Valley, who describes a pack of hounds which go off deer hunting on their own account, scouring the hills day and night in season and out of season, pursuing the deer. A party of public spirited guaners might with good effect turn out to hunt the hounds.....Humboldt sportsmen report good duck shooting on the Bear River. Carson deer hunters bring back excellent reports of deer hunting in the mountains....Quail are plenty in the foothills about Santa Cruz and also in the vicinity of Truckee.....Mrs. Ari Hopper, who is reported to be the greatest deer and bear slayer in Southern California, killed a large catgle hast week in Ventura county which measured seven feet two inches between the tips of its wines. She also killed a large rattle-snake the same day......Visions at Lake Tahoe are few now. The Grand Central will close for the season in about two weeks. Yet this is about the pleasuntest part of the year to visit the lake. Fishing is good and the weather is still desightful.....Deer are plenty about New Taconna, W. T., and a farmer two or three miles from that town has been obliged to

luming is very slow work where quail, no matter how small, can be had. The ducks that have come to market are in fine condition, but they appear to be scarce.

Truckee hunters have both variety and abundance sufficient to satisfy the most ambitions of them. The Republican of that rown says: "The mountains have a variety of game sufficient to satisfy sportsnen of almost any taste. Girzzlies and cinnamon bear can be found on very short notice, by those who have lost any bear. Mountain quall can be heard whistling on many a hillside. Groese are plentiful if their resorts are discovered, while deer, spairrels, woodchucks, badges, foxes, wolves and lions are common in different sections. This season game of most kinds is more than usually plentiful. The Indians are having a prespectors season. We frequently see Indian parties of two and three returning from a deer hunt, with their horsest leaded down with the carcasses and hides of deer captured on the trip. The lover of field sport can be accommodated by a trip to the mountains."

The lover of field sport can be accommodated by a trip to the mountains."

The Minnesota Dog Poisoning.—Fairmont, Minn., Ortober 8.—Editor Forca and Strona.—In your issue of September 30 appears a letter from a "Windom Pot-Hunter," which criticises severely a letter and its auther which appeared in a previous issue of your valuable paper over the signature of "Wausee," dated at this place September 1. Now, as "Wausee," is known to many of your readers, and as "Pot-Hunter's" letter does him great injustice, I hope you will allow me space for a line or two from a disinterested ismal-point. Evidently "Windom Pot-Hunter's is mistaken in bisman, and visits the sins of some "mon-resident pot-hunter" on an innocent man to whom they will not slick. From my acquaintance with "Wausee" I am certain that if ever at Windom (which I doubt) he conducted himself as a gentleman and true sportsman should, and that whatever he work in regard to the dog poisoning at Windom was written in good faith, and on what he believed to be reliable information. "Wausee" spent the most of the chicken season here, and wen the good will mad respect of those with whom he came in contact, by his sportsman-like conduct as well as his gentlemanly and social qualities. He is no market hunter, neither does he disregard the rights of farmers by "tresspassing on their growing crops," by the "loogish" manner displayed in hunting birds for market, "or by "shooling them and driving off without apologizing." And I am very certain that him out of every ten of our people will any with une-Let all such sportsmen as "Wausee" has proved himself by his stay among us to be come and hunt their fill, but "pot-hunters" are not wanted. "Anisoors Sioner-Max." "Windom Pot-Hunters" would undoubtedly have made a stronger case for his side had he referained from attempting

stronger case for his side had be refrained from attempting to connect "Wauser's" personal character with the merits of the question. Both these writers using assumed names are thereby unknown to the public, and the readers of this paper are not interested in their personal character. That which does interest us is to know whether or not we can with safety take our valuable dogs to the County of Windom, Minn. Judging only from the two communications on the subject already printed we should not hesitate to do so. Moreover, we are satisfied that "Windom Pot-Hunter" and "Wausee" would enjoy an afternoon afield together, and possibly their dogs might also work in harmony together.

would enjoy an aftermoon afield together, and possibly their dogs might also work in harmony together.

The Loxg Island Association.—The regular monthly meeting of the Long Island Sportsmen's Association was held at the rooms of the Foundain Gun Chib, on Friday, Oct. S. Abel Crooke, Esq., the Secretary of the Association, read a paper describing the different kinds of game and also the laws in regard to the same. It was accepted with thanks.

The Association is determined that after the next State Sportsmen's convention no one will have cause to call them an association of pigeon shooters, and in regard to this Capt. Elmendorf made a motion to appoint a committee from the Long Island Association to confer with the different clubs throughout the State, and make a code of game laws that will be applicable to all sections. This was referred to the Executive Committee and earried. Mr. Crooke suggested that action should be taken in regard to appointing a committee to solict prizes. The motion then made by Mr. Ackers to appoint the President of each club a committee was carried. Motion was passed to assess the clubs for money to meet the expenses of the coming convention, and to also assess the individual stockholders for money to get stock certificates printed. A motion was carried to the effect that a committee be appointed to examine the articles belonging to the State Association which are in possession of the L. L. Association, and report as to what condition they are in. Mr. Henry Alterbrand, President of the Washington Gun Club, received the thanks of the Association for a letter tendering to the club a song entitled the "American Sportsmen's Song."

The letter was laid on the table to be read at the next meeting, and Mr. Alterbrand and also the Glee Club of the Washington Gun Club, received the thanks of the Pamerican Sportsmen's Song."

The letter was laid on the table to be read at the next meeting, and Mr. Alterbrand and also the Glee Club of the Washington Gun Club, were invited to be present. The Presid

name and the class.

Mane Sportshen's Association,—At the annual meeting of the Maine Sportshen's Association held at Peak's Island last week, the following named officers were elected for the ensuing year: President, Hon. P. O. Vickery, Augusta; Vice-president, Geo. C. Lord, Kennelands; 2d Vice-president, Hon. Wm. W. Thomas, Jr., Portland; Secretary, II. F. Farnham, Anburn; Treasurer, E. W. Cobarn, Portland, Director for four years, J. B. Jones, Peak's Island, The following committees were appeinted by President Vickery of Augusta; Committee on Charrer—P. O. Vickery, Gen. W. S. Tilton, W. W. Thomas, Jr., The following committees are to report at the next annual meeting; 1st. On Laws for the Protection of Game an imals of Fur. Fin and Feather, and Insectivorous Birds—Everett Smith, Dr. E. F. Sleeper, C. F. Nason; 2d. On Fish Laws, including propagation and production—E. M. Stilwell, W. W. Thomas, Jr., W. H. Cloudma; 3d. On Enforcement of Game and Fish Laws—Dr. G. W. Martin, Wm. W. Castle, G. C. Lord; 4th. On Sporting Dogs—Everett Smith, W. W. Castle, and C. W. Curtis; 5th. On Voluntary Essays and Papers—Secretary, president and vice-president; 6th. Publishing Committee—

P. O. Vickery, H. F. Farnham and E. W. Coburn. The Exceptive Committee appointed the following wardens: Androscoggin—J. F. Pettingill, Auburn; Cumberland—Frank Merrill, Porlland; Kennebec—Dr. G. W. Martin, Augusta; Oxford—W. S. Skillings, Bethel; Sagadahoc—C. II, Greenleaf, Bath; Penobseot—E. H. Mersey, Bangor; Knox—James Wight, Rockland. York—Z. M. Cushman, Kennebunk. As soon as a charter is granted, these wardens will possess the same authority as State wardens.

lunk. As soon as a charter is granted, these wardens will possess the same authority as State wardens.

Retrien or Miniatrony Qrall.—Redister, N. Y., Oct. 4.—
It will be agreeable news to all interested in the migratory qualitheat the experiment rired in this vicinity by the Monroe County Club promises to be a complete success. My friend, G. D. B., on whose farm three pairs of the imported quality were placed, to-day informed me that there are two bevies of the birds close by where he liberated the old ones this spring. He thinks there are forty in the bevies, and when seen some days ago the young were strong of wing, and when fushed went off like the native Bob White. Darve heard that some others of those set out by the Club hatched large broods that seem able to take care of themselves. In this county we are making an effort to protect the native quali and grouse, and prevent shooting for three years, but it is difficult to guard against the soulless pol-hunter, one of which class last week went in the town of Irondequoit, about four miles from this city, and shot about fifteen quali out of a bevy which some of the decent sportsmen were trying to save for "seed," If we can discover who the fellow was that did this mean act he will wish his powder land been wet. There has been very good woodcock shooting hereabout since the opening of the season, but I regret to say that most of the birds found their way to restaurants. There have been a few good bags of gray plover shot on the uplands and wheat fields, and duck shooting is opening with good prospects. It has been too dry for snipe, but odd ones have been picked up, and on Saturday I saw a good bunch in a market; they were shot at "the ponds" in Greece. In the last match at balls the Monroe County Club defented the Rochester Gun Club, and the latter were vanquished last week by the Danaville Sportsmen's Association, who now contemplate challenging the M. C. G. In a fifty bird match last Thursday G. W. Crouch, Jr., Leat Al. Evershed; score, Crouch, single, 26,

single, 27, double, 11.

Diving Decov.

Some Gus Teitals—Wadley, Ga.—Editor Forcat and Rivam: It was succeringly asked once in the South, before the "wah," who would shoot any but an English gun? All were English. Some were cheep and worthless, some were hier priced and worthless; Purdy, Richards and Green were hier priced and worthless: Purdy, Richards and Green were the only makers in whom any reliance could be placed. Now all that is changed. We have beaten the world with our breech-loading rifles, and now some American firms come to the front with breech-loading shotguns that are not to be excelled in beauty of finish, in rapidity of action, and in hard, close shooting. In the following trials I used 3½ drs. Lathin & Rand's powder, very coarse in grain and very mild. I used 1½ oz. No. 8 shot, with two No. 11 pink edged wads on powder, and very thin wad on shot. The gauge of all the guns was No. 12. To test the penetration, I used sheets of pasteboard, ½ in. in thickness, placed one inch apart. Target, 30 in.; distance, 40 measured yards.

Fox, left, 284, right, 301; Remington, left, 231, right, 285; Cotl, left, 226, right, 287; Stevens, left, 236, right, 251; Clabrough, left, 273, right, 298; Baker, left, 337, right, 261, Penetration uniformly ½, with one exception, where Colt gave 1-16.

olt gave 1-16. Selecting the Fox and Baker guns as giving the best results, fired one round, both barrels, at 40 yards, No. 6 shot, same

Charge as above.

Baker, left, 237, right, 251: Fox, left, 102, right, 206.

Benefration same as above.

All the above guns were factory made, with the sole exception of the Chabrough, whose owner claimed that he paid \$250

tion of the Clabrough, whose owner claimed that he paid \$250 for it.

Comparing the results of the above trial, we find that American gunnakers have succeeded in making a breech-loader that will equal, very nearly, Greener's, one of the best in the 'market. Greener does not claim for his best guns that they will put more than from 29 to 500 No. 6 shot hr a 20 inch circle, 40 yards; and in this trial we must allow the difference in the number of pellets to the oz. English shot and our shot, making our No. 7 about equal to the English No. 6. No one could be more surprised at the result of the above trial than myself. I had been taught to believe that English guns were far superior to American guns. About the wear and tear of the guns I say nothing, for I know nothing; but judging from the appearance of most of the American guns used in the above trial, I should say that they were honestly made.

made.

There has been a great deal of balderdash of late years about the superiority of choke-bored guns for large shot. I cannot use buckshot in nine, for I think them injurious to the gun. With BB I can kill any game we have in Georgia, sending it through the largest turkey.

St. Clair.

Our correspondent neglects to state whether the guns were bored alike-a very important consideration.

bored alike—a very important consideration.

CONNECTICIT.—New Haven, lett. 4.—The ducking season for line shooting opened at George Lanfear's on Sept. 25. The night previous a number of the gun club went down. The line formed at six x. m. the next morning, about one hour too late and too far from the shore. There were very few ducks killed. The line broke up at one and at two the shooters sat down to one of Lanfear's capital dimers. The last week there has been an unusually good fly of wild pigeons and yellow hammers, but for some unaccountable reason very few wild pigeons have been killed. The largest bag, which was made by Messrs Mallory and Son in two mornings, was 140 wild pigeons; J. R. Bradly, 20; L. Barner, 25; J. Linsly, 16 in one morning. Mr. A. Barner one morning killed 56 yellow hammers. H. and J. Linsly during the week have bagged 94 yellow hammers, 25 pigeon and 16 gray squirrels. Leete has killed about 10 and Lines claimed to have killed 1 wild pigeon and 7 hammers, the latter he could not find as it was not on his pole. It is claimed that a member of the club has been unable to find his wardrobe since the last flight, and owing to his exposure that morning is not member of the club has been unable to find his wardrobe since the last flight, and owing to his exposure that morning is not able to be out. The game law went off on Oct. 1, but owing to the warm weather and scarcity of woodcock there were but very few who would inform one of their success. The Potter Brothers show their bag the first day, which consisted of 20 quail, 10 woodcock and 2 partridge. David Cowell brought home five or six quail, others came home without a bird and several claim they didn't go out.

A Test Case.—Oswego, N. Y., Oct. 2.—Editor Forest and Stream: The Ontario Hunting and Fishing Society of this city, an association of gentlemen leasing a large body of

marsh land upon the shore of Lake Ontario, near this place ce instituted an action against certain parties some time since instituted an action against certain parties for trespassing upon their grounds and hunting thereon, such action being brought under, and by virtue of Scc. 28 of Chapter 534 of the Laws of 1879 and its amendments. The case came on for trial yesterday, Oct. 1, before C. O. Case, Esq., Justice, of this city, and resulted in favor of the plaintiffs, a judgment being obtained by them for one violation of the lawpenalty, \$25 and costs. This success, it is to be hoped, will of this city, and resulted in rayor or the parameter being obtained by them for one violation of the law-penalty, \$25 and costs. This success, it is to be hoped, will deter other hawless hunters from incurring like risks, and will protect the rights purchased by the club. Why the owner of waste marsh land should not be entitled to obtain therefrom an income by way of rental, as well as from other portions of his farm by way of cultivation, is the only question involved, and we believe that a few encretic and determined enforcements of property rights, as necessity may arise, will settle the matter once for all. The Ontario Hunting and Fishing Society propose to deal with all men fairly, but they also propose, knowing and having paid for their rights, to maintain them.

also propose, knowing and naving part for their rights, to maintain them.

GAME PROSPECTS IN MINNESOTA.—Scale Centre, Sept. 20.—
Plenty of geese, ducks, sand-hill cranes, etc., have now made their appearance in large numbers. A good shot will lawe little trouble in largeing fifty to seventy-live in a day's sport. This country is free from glaring notices such as "No shooting allowed on this farm, "Don't shoot inside the fence," etc., etc., so a sportsman heed not fear being driven off just as he gets ready for work. In company with a gentleman from Massachusetts, the other day, we had a splendid time in the crackling stubble fields, with the bracing air for which Minnesota is celebrated. The framers will allow one to dig "pits," and, as a general thing, seem to enjoy the sport of seeing the sportsman bring down four or five old "honkers" as does the hunter hinself. In one instance we had shot a fine goose in a muddy lake, and, as our dog would not retrieve, the generous old gentleman sent the "lad" to the house and brought out the "Newfoundland pup," which, it is correct to say, soon landed our game on terra from a fine for the providence of the

The Heaviest Woodcock.—Pranklin, N. Y., Ook. 2,—I was greatly interested on reading "Parvas" letter on "Breeding Quail in Confinement" in late issue of Porrst and Stream, and I sincerely hope that some wealthy sportsman, or body of sportsmen, will step to Mr. Benbrook with the requisite funds to make this experiment to be thoroughly tested; for it not only is a good work, but a great work, one that certainly will be greatly appreciated and patronized by Maine, New Hampshire, Vermont, Massachusetts and New York, and probably many sister States, and I believe there is not a sportsman in any of the above mentioned States but will cheerfully contribute each his mite in such a case as this, as, judging from "Parvas" letter, Mr. Benbrook is the right man in the right place.

Latso notice "E. T. B." inquires for heaviest weight of woodcock or quail shot in America, and as I have had quite an extensive experience with woodcock and ruffed grouse, I will give in my testimony, as he requests. Some four years

woodcock or quan save as an extensive experience with woodcock and ruffed grouse, a will give in my testimony, as he requests. Some four years ago I shot a remarkably large female cock, which attracted my attention so foreibly that I had it weighed, and found it kicked the beam at just 1140z. Since then I have shot two or three which I thought might possibly be larger, but was not positive, as no facilities for weighing them were at land. This I can say is the largest American woodcock I ever saw. Let us hear from others on this, and also the heaviest weight to muffed grouse.

Let us hear from others on this sum on rulfed grouse.

M. P. McKoox.

Syracuse, Y. Y., Oct. 9.—I find recorded in my note book the weight of two woodcock—one killed October 10, 1834, by John H. Mann, the other killed November 10, 1877, by Jefferson Downs; the former weighing 10 ounces, the latter 10 3-16 ounces. Have no record of weight of quall.

The ordinary weights of woodcock are from about 5 to 61 The ordinary weights of woodcreak are from about 5 to 95 onnices for males, and 7 to 8 ounces for females. In 1874, while quall shooting in Warren county, N. J., late in November, we moved two woodcock one day, the only long bills we found, and were fortunate enough to kill them both. One weighed 94 ounces and the other 9 ounces—184 ounces for the two. These were the largest woodcock we ever saw. Quall do not seem to have been weighed, but we shall look for reports when the season opens.

MR. LANE EXPLAINS—Good Ground, L. I., Oct. 3.—Editor Forest and Stream: Under the heading of "All Around Notes" in the last issue of your valuable journal, I noticed a communication signed "Bedford" and dated Lanesville, Ohio, communication signed "Bedford" and dated Lanesville, Ohio, Sept. 13, containing certain statements which, in my own justification, I feel myself obliged to call in question, relying on your often proved courtesy to grant me the necessary space in your paper. In the first place your correspondent omits to mention that he applied to me by letter for accomodations, and that I immediately telegraphed him that my house was full, in spite of which he and his friends who "wanted to shoot something" came on from Hoosierland. When they arrived I did the very best I could for them, securing for them the best guide in the neighborhood and also the best board and lodging; as for the shooting they may have had at places in the bay outside of those leased by me, and which are "private property." I leave that to be determined by the number of birds shot in my blinds and marshes as compared with those shot elsewhere in Shinnecock Bay. Although rather irrelevant, permit me to offer you my most hearty approbation of your exposure of that villatious compound yelept "Dittmar powder." William N. Lanz.

A Winter Sporting Grounder." Millaton.

A WINTER SPORTING GROUND—Indianola, Texas, Sept. 30.

—I am glad to give you any information I can in regard to game resources of this section, but a few lines from my friend the control of Corne Chief. game resources of this section, but a few lines from my friend "Bexar," of Corpus Christi, who wields an able pen and who has hunted over this as well as the section where he now lives, would, I think, be more satisfactory to you and your subscribers. In our immediate vicinity we have very fair sport both for fish and game. Go out from amongst the houses and you can sit down with your line in one hand and your gun in the other and you can see almost sure to have fish or fore! in You can sit down with your me in one hand and you gain in the other, and you are almost sure to have fish or fowl in a short time. In their season, say from August 1 to October 1, we have on the prairie thousands of "papabottes" and snipe, a good sprinkling of prairie chickens and quait (on and near the river bottoms, and where there are any cover, such as bushes, etc., the quails are in thousands), geese and doucks begin to arrive, and from as ousness, etc., ine quants are in thousands.). In colore the geere and di cks begin to arrive, and from that time until March we have swans, geese, ducks(of all kinds), cranes, (sandhill, hugler and others), Wilson and other snipe. You need not go over 50 yards from your house to shoot snipe of

any kind, and a sportsman of moderate desires can have a fair any kind, and a sportsman of moderate desires can have a fair day's shooting and not go a mile from home. The bays between here and Corpus Christi in the winter season are alive with fowls of all description, and on the islands there are a good sprinking of deer, good camping places all easily accessable by boot, and plenty of fine fish and cysters in shallow water, almost at the door of your camp. Any of the beatmen can take parties to any of these places (and there are plenty of hoats here), and a sportsman can have all the fun he desires. An experienced gumner with the appliances they use North, such as blinds, boats and decoys, could kill immense quantities of game. We use none of these here, do not take the trouble, as we can kill all we want without them. Having mild winters, parties wishing to spend the whiter hunting or fishing could not pick out a better locality.

G. LOND POINT—London, Ont., telebar 5.—Following is the

Loso Point:—London, Ont., October 5.—Following is the sorre of ducks bagged by the party of sportsmen now at Long Point. The figures show that the Marquis of Lorne knows how to handle his gun as well as the rest of his party. Your columns not long ago contained an admirable sketch of the Long Point preserves, club-house, etc. The score is as follows:

OUR DETROIT LETTER.—Detroit, October 11.—The happy season of the sportsman is fairly upon us. Ducks are everywhere. In two days hast week Mr. L. B. Jewell, of Hartford, the Nimrodian brother of the satin-haired ex-Postmaster-General, backed by a well-known Detroit hunter, bagged at Point Mouillie three hundred; most of them were mallard, but a fair proportion were the blue-winged teal, all fat, and such as I have had a tooth in, juicy and gamy to a degree. Andrew Jackson, the philosophical phat phellow of Sault Ste Marie, 'recently left his native wilds and came down to Lake Eric to shoot civilized game. He made a decided hit as well as divers misses; but what he lacked in skill with his gun he nade up in his manipulations of the cuisine. As I predicted, the rush to the North Woods is at hand, and deal-ers in sportsmen's supplies are reaping a shining harvest. The pigeon shoot for the Michigan State medal, by the members of the Michigan State Medial Association, is booked for next Tuesday. There is to be a lively contest with the result of which I shall acquaint you in my next. The Mr. Jewell of whom I have already written is still surveying the big marsh for duck, lawing returned thither on Saturday.

G. P. G.

Workester, Mass. Oct. 9—The Sportsmen's Club had a OUR DETROIT LETTER - Detroit. October 11, - The brony

for duck, having returned thither on Saturday.

G. P. G. WORGESTER, Mass. Ort. 9.—The Sportsmen's Club had a splendid day for their annual shoot yesterday, and enjoyed themselves quite as much breaking glass bulls at their grounds at the lake as they would have done had they scoured the woods for a circuit of 90 miles in pursuit of game. Thesides were chosen and captained by A. P. Pond and Alba Haughton, and resulted in the defeat of the Haughton side, who paid for the collation served on the grounds by Landlord Tower of the Lincoln House. The score was as follows:

A. P. Pond 17, W. S. Perry 20, W. H. Cole 16, L. R. Hudson 16, J. B. Goodell 15, A. B. F. Kinney 16, C. R. B. Claffin 16, O. F. Taft 16, Stedman Clark 14, R. R. Shepard 12, C. H. Bowker 13, Chas. Hartwell 5; total 176.

A Haughton 19, C. B. Holden 16, G. J. Rugg 16, E. T. Smith 12, M. D. Gliman 15, L. G. White 17, A. L. Ricc 16, E. S. Knowles 13, J. T. Boyd 12, A. B. Joslyn 12, A. F. Hatch 8, Isaac Fiske 8; total 164.

After the side shooting, sweepstakes were arranged and all.

atch 8, Isaac Fiske 8; total 164. After the side shooting, sweepstakes were arranged and all ands engaged in the sport. A handsome silver mounted stol, offered by Mr. A. B. F. Kinney, was won by Mr. A. Pond who broke 16 straight, defeating W. S. Perry, who to the fight of the match being shot on the "miss and out" ethod. There was a large attendance, and everybody had nod time.

a good time.

GABE CONSTABLES.—We have long advocated the appointment of game constables, as the only efficient method of enforcing game legislation; and we are glad to see others coming around to the same view of the case. A game constabilary, as we have said before, is the only true solution of this important problem.

portant problem.

Countino Crows—Hornellsville, N. Y., Oct. 10.—You wish to know how I know there was 20,000 crows in the flock? Of course I could not swear to it, but think you could safely put in another 0 and then not have too many. I counted 238 flying over a certain point in just two minutes, and they were flying like that while five of us were shooting a string of ten glass ball apiece. We were in a valley and could only see a small part of the flock, but a gentleman told me as he stopped to see the shooting, that he had been driving under the flock for two miles or more. So you see there was course coungl for a big flock.

JOHN.

a big flock.

INFOINATION WANTED—GEORGIA GAME—Potteritle, Oct.
11.—I would like a little information in regard to the game I will find in Georgia in the country north of Atlanta, within a radius, say of fifteen or twenty miles. I expect to spend the winter about there, and would like to know something about the shooting so as to prepare myself beforehand. I use a twelve gauge gun, which I think will do for all the game I shall find so far inland. I suppose I will be able to get a dog down there, will I not?

DEER AT TIMS POND .- Mr. J. Warren Tuck writes: DEER AT TIMS POND.—Mr. J. Warren Tuck writes: "One Sunday, during my recent visit to Tims Pond, as I sat on the shore I saw two deer come down into the lakelet and drink of the clear cool waters, then frisk back into their forest home." He adds that the whole country there is full of deer, and those who are prepared to enjoy the sport with due moderation will find Tims Pond an excellent rendezvous. We are glad to know that the proprietors of the camps there are determined to see fair play for their visitors, for the trout and for the game. To protect the country and prevent the repetition story of the Rangeleys, Adfrondocks and other like resorts some shrewd protective management is absolutely

ESSENDEN.—Uticago, Sept. 25.—Game is more picutiful than it has been for some time past. The ducks are on the move South. A few days since Mr. Henry Kleinman, at Calumet Lake, shot one hundred and five ducks, and on Saturday, the

tsh inst., Messrs. Ralf B. Organ and Charley Mears, at the Maksawba Club marshes, bagged one hundred and forty-six. The majority of them were teal ducks. A few wood ducks were among them. Messrs. Mears and Morgan are both members of the North Side Archery Club of this city and do some fine shooting with bow and arrow occasionally. J.

We Go Cooning—South Abington, August 38— It is a well-known fact that the festive coon is a very scarce animal in this portion of Massachusetts, but once in a while hunter standing upon one, and the story is handed around until killing coon is a very source.

in this portion of Massachusetts, but once in a while hunters stumble upon one, and the story is handed around until killing a con is a very common occurence ("in your mind.")

It was after hearing several coon stories that I received an initiation to meet some friends not far from here for the purpose of indulging in an old-fashioned hunt, and a few days later saw a dog chain, with a fool on one end and a yellow bound on the other, take the cars for the big coon swamp. My coming had been looked for, and the services of old the Reed, an experienced coon and fox hunter, had been secured for the occasion. After supper Charlie and I lit our pipes and walked down to the village store.

Like most country stores it was filled with a crowd of loafers, who seemed to come together for the purpose of smoking and exchanging yarns. It was not long before an ineautions word touched off the assembly. At last, right here in Massarbusetts, I had discovered the hant of the coon. Every man in the store had his coon story all ready, and such phrases as "storking on the cown," "skepple of the tree," etc., proved to me that they were old hands at the business.

About nine or ten we turned in for a short map, but were swakened at twelve by Ike, who was at the gate with his pony and wagon. We took our seats and away we went; I shall sever forget that drive. The August moon was at its full, and the little pony whisked us along the moonlit road at a lively pace. Fen houses were seen, and these seemed buried among the trees. Finally we reached the first corn-field, situated on the edge of a large cedar swamp. Here we disembarked, Ike and I taking the hound and skirting the field, while the others remained with the team. We had come to a took wall and were getting over, when the dog, who was on the wall, suddenly let out.

barked, Ike and I taking the bound and skirting the field, while the others remained with the team. We had come to a zone wall and were getting over, when the dog, who was on the wall, suddenly let out.

Away down the wall he went, sounding the charge, while we, hurrying after, listened to the music. Straight into the swamp he held the track, every note from the old hound coming to us like the blast of a bugle. Soon a long-drawn quavering ory proclaimed the game had treed, and in single file we penetrated the swamp, lke leading the way. Picking our way through the dense growth of vines that covered the ground, we at length came to an open glade, in the centre of which stood a large pine, guarded by the old dog. I took the gun and commenced to circle the tree with the view of getting his body between myself and the moon. At last I discovered a dark body flattened on a large limb, and calling Ike, sked him if I should shoot. He replied, "Bang away!" And taking careful aim, I fired. I was rewarded by an unearthy how, and immediately a heavy body struck the ground. Old Driew was on hand to receive company, and for a few minutes things were a trifle stirred up. Four deeply interested spectators held their breath as over and over they went. But be old dog was too much for him, and he had to surrender. We choked off the dog, and there he lay in the moonlight, his glossy coat sadly torn in the struggle he had just now I shall have to change my base. It don't skeep must

monlight, his glossy coat sauly form in the subsectivity post through.

In to the present time I have been writing a coon story, but now I shall have to change my buse. It don't take many more letters to write coon than it does cat, and it looks better on paper; but if I say coon, everybody within fitty miles knows I never Rilled a coon in my life. So, with Ike Reed, I will say: "Thunder! what a cat!"

We took the back track out of the swamp, and on the way to the wagon ran across a patch of melons. With these we southed our wounded feelings, and as the moon began to fade before the approach of day, we crawled between the sheets to dream of running hounds and tangled cedars.

RAMROD.

Massachusetts.—Southbridge, Oct. 9.—Hunters report the partridges as scarce and wild, though at the first of Septembethey were more numerous than usual. Hardly any woodcock have been killed. Quail are more numerous than for years. Squirrels are very plenty.

LIVE DECOYS.—A Fort Dodge, Iows, correspon on thas forsale a small flock of wild geese, which may be used for

decoys.

Bullivah County.—Eldred, Oct. 11.—Large game, such is deer and bear, are unusually plenty here this season. Peter Sullivan killed a harge deer last week, and George Bunce sulled a small deer. Partridge plenty; woodcock scarce on Bradley.

Bradley.

as deer and bear, are unusually plenty here this season. Peter Sullvan killed a large deer last week, and George Bunce killed a small deer. Partridge plenty; woodcook scarce on secount of dry weather.

FOREST AND STREAM GENERAL PASSENGER AGENCY.—Chi.cago, Ill., Oct. 5.—The following persons have gone West over the Chicago & Northwestern in the past few days to hunting grounds: J. H. Bradford and Mr. Pollock, of Massachusetts, and M. L. Johnson, of New Jersey. They go to Fremont, Neb. D. C. Plumb, of New York; M. C. Pike and A. H. Harte, of England, to Wisner, Neb. October 9.—Have quite a number of hunters to report this week. N. M. Nixon and party of twenty-one, from Indiana, went to Escanaba, Mich.; P. T. Potts and party of eleven, from Indiana, went to Escanaba, Mich.; Geo. Dodd and party of four, from Indiana, went to Escanaba, Mich.

The Forest and Stream respectfully asks its friends

PENNSTIVANIA NOTES.—Red-winged blackbirds are numer-ous in the Delaware marshes this full, and Philadelphia gun-ners are jubilant. The editor of the Germantoan Telegraph came across a covey of partridges within the city limits the other day. He says these birds are more numerous this fall than ever before within his memory.

PENNSYLVANIA—Washington.—We expect to have here in Washington fair quail shooting this fall. The grouse are plenty here, but underbrush very thick in woods.

TRAVELING SALESMAN.—A well-known correspondent of this paper, who is well qualified for the position sought, desires to engage in the service of some sporting goods dealer as a traveling salesman. Any letters directed to "Salesman," this office, will be forwarded."

A STORY WITH A MORAL. -Stamford, Ky., Oct. 6. A STORY WITH A MORAL.—Stampord, Ky., Oct. 6.—Last week the Rev. Petrey, of this county, who was holding a protracted meeting at Rock Castle, went to the house of one of the brethren to spend the night. He had hardly got scated before a hen flew into the house, and attempted to slight on rifle that hung on the wall. The weapon tipped over, and falling on the lock, was discharged, the ball taking effect in the thigh of the preacher, causing lockjaw, from which he dlod last night.

### SHOOTING MATCHES.

### THE MAINE STATE TOURNAMENT.

THE annual sportsmen's tournament of Maine occurred this week on one of the islands in in Portland Harbor, under the anspicos of the Peak's Island Shooting Club, commencing on Tuesday and lasting through Wednesday and Thursday, About sixty men, representing about six of the leading clubs of the State, competed, the objective point being the diamond badge, which is the emblem of the State championship, with 20 per cent. of the entrance money. The other prizes were as follows: Second, a fine \$50 Parker gun, donated by Parker Bros. of Meriden, Conn., through their Portland agent, Mr. T. B. Davis. In forwarding the gun, Parker Brothers wrote: "We hope a good man will win it, and with a Parker gun" -a wish that was fulfilled to the letter, as the gun was captured by Mr. Win Jones, of the Peak's Island Club, who shoots with a 10-bore Parker. Third prize, 40 per cent, of entrance money, wou by C. L. York, of the Kiverside Club; fourth prize, 250 pounds of shot, donated by the Leroy Shot and Lead Company, through Mr. T. B. Davis, agent, and won by H. C. Harmon, of the Forest City Club; fifth prize, 25 per cent. of entrance money, won by J. F. Randall, of the Peak's Leand Club, who had hard work to get it away from Bert Jones, a boy of seventeen belonging to same club; sixth, half case best sporting powder, donated by Latlin and Rand, through Mr. Davis, won by P. Jervis, of the Androscoggin Club; seventh prize, 15 per cent, of the entrance money, taken by G. L. Brackett, of the Peak's Island Club. The cash prizes are the per cent, of \$58. The diamond badge was gracefully allixed to the coat of Mr. E. E. Pomeroy, of the Androscoggin Club, a gentleman who had won it twice previously. The badge has now become the property of the An-Match at pigeons, 15 birds per man, 21 yards rise, two plunge

traps; open to teams of not less than five men from any sporting club in the Siste :

entering; Willard took first money (\$9), West second (\$5 40), Jerris third (\$3.60). Next in order was the grand glass ball tournament for the State championship and eash prizes; 20 single balls from Card's rotating trap, and 20 doubles thrown straight away; highest total to take the badge; next highest total or balley in the badge; next highest ford, cash prize, \$9; highest score on singles, \$9; highest on doubles, \$9; no one man to take two prizes; 23 men entered.

The championship badge was offered for competition two years ago by the Cushnoc Heights Gun Club of Augusta, at which time it was taken and since held by C. F. Nason of Lewiston. It is a very handsome gold badge in shield form, elegantly engraved, and is valued at \$25. Appended is the score:

A. G. Sterling, of Peak's I	siund,	WHO LOOK LIE STREE CE	rambion-

A. 6. Sterling, of Peak's Island, who took the State championship badge on pigeons last vear, now takes the State championship badge on glass balls. II. A. Jones, of Peak's Island, takes \$9 prize for largest score on totals below the badge, \$5 ; A. Q. Gond, of the Riverside Club, takes \$9 for bighest score on doubles, 16, and H. F. Farnhant takes \$9 for bighest score on singles, 20. This finished the most successful fournament ever held in Maine. The best of feeling prevailed, and, at the close, votes of thanks were passed to the judges, Mosers, Pollister and Foss, and to the referre, Mr. W. F. Wood. Votes of thanks to Messes, Parker Bros., Laffin & Rand, and the Leroy Shot and Lead Company were also passed without a dissenting voice.

Eastern Field Trials Club's Second Annual Trials, Robins Island Peconic Bay, L. L., Nov. 29. Jacob Pentz, Secretary, New York.

### ST. LOUIS DOG SHOW

ST. LOUIS DOG SHOW.

THE second annual bench show of dogs given by the St. Louis Kennel Club took place in charming weather at the Fair Grounds, at St. Louis, Mo., on October 5, 6, 7, and 8. The entry books closed on September 27 with 239 entries, and at the opening of the doors, on Thesslay morning, there were but few empty pens on account of absentees. The St. Louis Kennel Club with commendable spirit had done everything to make the exhibition a success, which was proved by their offering money premiums which aggregated over \$1,100. The general supervision was in the hands of Mr. Charles Lincoln, so well known as a competent manager in enterprises of this kind.

In the aisle on the eastern side of the building, to the right of the main entrance, were twenty-three secured stalls containing the crack dogs of the St. Louis Kennel Club. None of these animals were entered for competition, but simply exhibited, that the public might have an opportunity of secting the finest and largest collection of pointers in this country. The two famous stud dogs, Faust and Bow, which that genial artist, Mr. Tracy, has so eleverly assisted in making known to the sporting world, headed the list of the twenty-five of their class. Next came Trap, by Plikington's Tory (the sire of Garnet), and who is regarded as the coming champion. Drake and Viking, litter bothers to Trap; Jessamine and Keswick, two superb bitches, which have also been a recent study of Mr. Tracy; Januty June; Zeal, Trinket, Marquette, Bliss, Judy, Luke Blackburn, Kismet, Spinaway, and seven unnamed puppies followed in order. It was claimed by many that this exhibit was the feature of the show, but from the crowd surrounding the stalls which contained the entries from Mr. A. H. Moore's kennels and those from Mr. Heward's of Toronto, it appeared that each shared the bonors as far as public patronage was concerned.

crowd surrounding the stalls which contained the entries from Mr. A. H. Moore's kennels and those from Mr. Heward's of Toronto, it appeared that each shared the bonors as far as public patronage was concerned.

Owing to unforseen circumstances Mr. E. F. Stoddart, of Dayton, Ohio, who was to have awarded the prizes in the pointer classes, was unable to fulfill his engagement, and Mr. E. C. Sterling, of St. Louis, was selected in his stead to perform the onerous duty, which he did to the satisfaction of the many. Meanwhile the setter judging was gone through by Mr. Charles H. Turner, of St. Louis, and when the various classes were brought out for his inspection he was surrounded by such well-known sportsmen as Mr. S. H. Turnell, of Chicago; Mr. John B. Sage, of Buffalo; Mr. J. M. Barbour, of Louisville; Mr. A. H. Moore, of Philadelphia; Mr. George Fox, of Philadelphia; Mr. J. Ames Moore, of Toledo: Mr. Charles Mack, of Detroit; pr. J. S. Nivin, of London, Out; General Rowett, of Carlinville, Ill. These and other noted sportsmen subsequently spoke in the highest terms of the correctness of Mr. Turner's conclusions.

Mr. Moore's Leicester was without a competitor. Mr. Moore also captured sine firsts, three seconds, and two special prizes. The competition between his Count Dan and Rhoderick was ever cless, but Rosy Morn clearly outclassed all rivals.

The judging proceeded throughout the day with the follow-

The judging proceeded throughout the day with the following result, which we publish in full below:

### LIST OF ENTRIES.

### NEBRASKA FIELD TRIALS.

NEBRASKA FIELD TRIALS.

The SE trials closed on Friday, Oct. 1, after the running of the al-alged stakes, as the brace and puppy stakes did not fill, there being but two entries in each. In the all-aged stakes were entered the following dogs:

Prairie Thistle, J. Dawidson, Munroe, Mich.: Prairie Ranger and Pride, J. H. Whitman, Chievag, Ill.; Judy, Flirt and Lizzle Lee, G. Waddington, Geneva, La.; St. Elmo and Romeo, Dr. Spier, Brooklyn, N. Y.; Daw, F. A. Taft, Dedham, Mass., Colonel, Mr. Baum, Lincoln, Neb.

These dogs were drawn to run in the following order: Prairie Thistie and Romeo, 1st heat; Pride and Judy, 2d heat; Prairie Ranger and Colonel, 3d heat; Lizzle Lee and St. Elmo, 4th heat; Daw and Flirt, 5th heat.

The first brace were put down about two P. M. on open prairie, where they had a fine chance to show their style, speed and quartering. Thistie is a handsome black and white dog, rather leggy. He is by Charm out of Pearl, resembling in form his dam, inheriting her indomitable will. He is very fast, ranging wide and quartering his ground well, but was not obliged to run long to convince the judges he was a better dog than Romeo, who ran with him. The scarcity of birds

prevented other dogs showing their real field qualities. Only three birds were found, Romeo flushing two while Thistle pointed staumehly. One, which was shot, he refrieved in fine style. His range was bold and fast, his quartering above the average, his style on point very decided. Homeo is undoubtedly a good rog in cover, but his range was too close for the open prairie, his quartering not really good, and he had no chance to show his style on point or retrieving qualities. The judges decided Thistle winner of the heat.

Pride and Judy were called for the second heat. Both are medium sized, lemon and white in color and fine ceated, and, had they dark eyes and nose, would be called handsome. These were little brother and sister, born Jan. 1, 1879, by Charm out of the native birth Tip. Birds were very scarce and a large find of open prairie was hunted over before any were found. Pride at last found and pointed in grand style. Judy backed. This was as fine a piece of work as had been seen. The birds rose very wild out of range and were not shot at, consequently Pride had no chance to retrieve. They were down nearly two hours when the judges ordered them up to be put down the following morning, as it was getting late. Both Pride and Judy are fast, receiving, I think, near the maximum of twenty for speed. Their quartering was exceedingly good: both are wide and independent rangers. In style, Pride is the better: in speed, Judy has a trifle the advantage; as a brace they could scarcely be betten. They are of same size and color, shout equal in speed and style, are under good subjection, dropping instantly to wing or shot, and to fur as well. Although neither had ever seen a jack ratbiit, when one started directly in front and close to both of them, Pride dropped instantly, not withstanding the rabbit went entirely around him, while Judy dropped to word. The judges highly complimented this, saying they had never seen it done before, and in their experience had seen but few young does that were under sufficient contro

sunicent course not to chase the fresh jack rabbit that started near them.

The owner of Pride decided before starting out the next morning to withdraw him, giving the heat to Judy, they being so nearly equal in all points as yet tested, that he felt satisfied as Pride did not retreive it would be ten points in the former's favor and give her the heat; having had them broken to work as a brace, Judy only has been allowed to retrieve. Each dog was worked by its owner. The next two that ran together were Lizzie Lee, black and white, born March 13, 1879, by Druid out of Whitman's Milley (Rob Roy, Daisy), hunted by her owner, G. Waddington, and St. Elmo, black, white and tan, about four years old, winner of first prize at New York trials hast fall, owned by Dr. Spier, Brooklyn, New York, hunted by Jefferson Cooper, who has worked him in the West the present season. These dogs were cast off about nine A. M. They went very fast and quartreed beautifully, yet Lizzie's work was most admired. Birds were found by both. St. Elmo, when going at a rapid rate earthing the seen tof a bird dropped. Lizzie was brought up to back, which she did far better than was expected, as she could hardly see St. Elmo in the high grass.

St. Elmo backed staunchly a point made by St. Elmo. The work of this pair of dogs was worth going a long distance to see; they are both independent workers in fine style. It was a very close heat. I think Lizzie's superior nose, a little the best quartering, with extra speed, gave her the heat. Were these two worked together for a short time they would be very hard to beat. St. Elmo has improved very much be heat with a pup not mineteen months of over on old and tried winner.

The uext wo then put down were Prairie Ranger, The owner of Pride decided before starting out the next

since ac came West. AIr. Waddington felt quite proud to win the heat with a pun not nineteen nonths old over an old and tried winner.

The next two then put down were Prairie Ranger, owned by J. H. Whitman, hunted by G. Waddington. Color, white, lemon ears, by Charm, out of Pearl, brother to Thiste, born February 15, 1879. Colonel, black and tan, whose pedigree and age I did not obtain. He was hunted by his owner, Mr. Barnes, of Lincoln, Neb., and was the only dog entered from the State whose Sportsman's club gave the trials. Colonel was quite lame with rheumatism in fore-leg, while Ranger was also lauce, having injured his foot. Ranger swing for a great was good above, having injured his foot. Ranger swing that the trials are considered well, had a merry tail action, but after running over two hours in the heat of the day found no birds, consequently had no opportunity to show his style on point. Colonel did not range nor quarter well, but fortunately found and pointed one bird, which being shot at, fell a long distance from the owner and was not retrieved. Colonel, by breaking in, showed he was anxious to go for it, but dropped at command. As he had shown nether superior qualifies of ranging, quantering, retrieving or backing, it was a surprise to some when the judges gave him the heat. I was a surprise to some when the judges gave him the heat. I was a surprise to some when the judges gave him the heat. I was a surprise to some when the judges gave him the heat. I was a surprise to some when the judges gave him the heat. I was a surprise to some when the judges gave him the heat. I was a surprise to some when the judges gave him the heat. I was a surprise to some when the judges gave him the heat. I was a surprise to some when the judges gave and heat. I was a surprise to some when the judges gave and heat. I was a surprise to some when the judges gave and heat. I was a surprise to some when the judges gave and heat. I was a surprise to some when the judges gave and heat. I was a surprise to some when the ju

and a native bitch.

Daw is a large-sized dog with fine style, enryting his head well up, ranging and quariering in good style, showing superior nose, and considered by the judges and many others as the most stylish dog on point and back of any that ran. Flint I thought fully his equal in all except staunchness in backing. Daw stands either at point or back with head and tail high, often taking his position at either; he does not seem to move a muscle of his body. I never saw one so staunch. Flint's style, both on point and back, is a low, crouching artitude, with head and tail on a line. Both retrieved well, pointed and backed, etc. This heat was given to Daw, but, like the one between St. Elmo and Lizzie Lee, it was very close. In the closing decision of the judges, Lizzie Lee won first pize, St. Elmo second, Daw third.

There seemed to be very little interest taken by the differ-

prize, St. Elmo second, Daw third.

There seemed to be very little interest taken by the different sportsmen's clubs in Nebraska in these trials. Had it not been for J. H. Hurley of Lincoln, Dr. Livingston of Plattsmouth, and Mr. Kennedly of Omaha, they would have been a failure. As it was, great credit is due these gentlemen for their polite and gentlemanly treatment of all who were there to participate in the trials. Many of those whose dogs were entered will remain for some time in the State working their dogs on quail, which are to be found in limited numbers, but mostly in groves around farmers' houses. I am told they become more plenty as the weather becomes colder, when they are found mostly on banks of the streams which are covered with heavy timber.

Another correspondent who was present writes: The number of dogs present was small, but made up in quality what it lacked in numbers. In the all-aged stakes the dogs,

as a lot, were all first-class.

They were drawn in bree They were drawn in braces and run in heats under the National Kennel Club rules with the following results:

	Pace	Style	Back	Stannet-	Range	Quarter	Ohey	Retrieving.	Pulling	Total.
Thistie) Romeo( Pride)	25 20 0 10 0 13	4 1	0 0	5 5	6 3 5	4 5	21 3 92	S D	t ·	Drawn. Drawn.
St. Elmo) Lizzie	0 19 20 15 35 18 25 10	3 6 5 2	5570	5 6 6 4	5 6 6 3	5 5 6 3	4 4 3	10	.1	1 - 1 - 1 - 1 - 1 - 1 - 1 - 1 - 1 - 1 -
Ranger	0 17 18 18 15 18	4 3 4	4 7 5	5 6 5	5 6 6	5 kg	83). 4 4	10 10 16		191 111 161

This left Thistle, Judy, Lizzie, Colonel and Daw as winners in the first series of heats. Before the judges had annuenced the scores all the parties interested agreed that imaginute as the searcity of birds would not permit the running of the second series of heats, the judges should determine the first, second and third best dogs from among all that had run as above, which resulted as shown by the above score in giving first to lizzie second to St. Flow and third to Daw.

as above, which resulted as shown by the above score in giv-ing first to Lizzle, second to St. Elmo and third to Daw, There being only two entries in the Puppy Stakes and one in the Brace Stakes, it was decided to return the entrance fees and omit those stakes altogether. This ended the first field trials in Nebraska; but we have learned something, and next September we will hold another that shall redeem all the shortcomings of this one.

BOR WITTEL

-In all probability there will be several of the crack Western dogs entered for the Eastern field trials. Should this be 80 the competition between Western and Eastern dogs will be unusually interesting. It has often been said, and absurdly too, that Eastern dogs are of no account on the prairies. We will now have an opportunity of seeing for the first time Western dogs handled on Eastern soil; and one thing is certain, no "duffer" will this year nose his way to the front.

Sensation.—The Westminster Kennel Club have entered Champion Sensation for the Eastern Field Trials, which are to be run on Robin Island next month. In the meantime, Mr. S. T. Hammond, of Springfield, Mass., will give the splendid fellow plenty of work in Maryland. There has been a great deal of talk among a certain class that Sensation was only good to show on the bench. Our sportsmen will never the splendid fellow plent of the properties of the special test and heart say—whether this is true or not. We sincerely trust the dyspeptics may be disappointed.

dyspeptics may be disappointed.

A Long Chare.—The grandest running on record was made by two full-blooded fox-hounds belonging to A. H. Dobbins and R. E. Beem, of this place, last week. The hounds, a bitch and a dog, started a red fox on Friday evening at 7 o'clock, and made a continuous run until Sunday morning at 10 o'clock, making thirty-nine hours. The dogs started the fox in the northern part of the county, running him in a southerly direction about fifteen inlies, where they swam the river, and from that time on they kept on the west side of White River. The dogs were in close pursuit of the fox on Sunday morning, and it is supposed they caught him, Will the Foreser and Strucka of New York please tell us whose dogs have beaten this time? The bitch weighs thirty-four pounds and is twenty-circh months old, and the dog is eighteen months old and weighs forty-live pounds.—The Democrat, Bloomfield, Ind.

As it is only occasionally that feats of endurance of this

As it is only occasionally that feats of endurance of this kind are dotted down, it is impossible for us to give anything like a record of fox-hound running. We will, however, be glad to hear from our readers who are interested in the sport, and no doubt the above account will unearth many interest

and no doubt the above account will unearth many interesting answers.

The Boston Dog Law.—The regular season during which Mr. Al. Watts, the city dog-catcher, is authorized to catch and kill all unlicensed dogs expired September 30. The proscription of unlicensed cannots begins July 1, and since that time Mr. Watts has destroyed 691 dogs. Most of these were monerels, of no value to their owners, if they had any, and a curse to the city. These animals are caught by a net on a pole, and some are lassoed. They are conveyed to his repository and a drop of powerful acid put upon the tongue, which causes death in less than ten seconds. Sometimes when in pursuit of useless canines he finds a valuable dog running at large without his collar, and whenever possible he follows the dog to the home of its owner and notifies him that the dog must wear a collar bearing the number of his license. No dogs are kept at the repository, but are killed at once. These rules are imperative and are not deviated from. Mr. Watts' services are valuable to the city in more ways than one. The fact that such an officer is employed leads everybody who cares for their dog to get a license, and the number of licenses in proportion to the number of dogs is larger than ever before. In fact where \$1 is paid for destroying a dog the city gets \$20 for licenses. Many complaints are brought to Mr. Watts by people who live in a neighborhood where some dog makes night or day hideous by howling. Often he is called to kill a dog supposed to be affected with madness, and these cases are promptly attended to. He is not a believer in hydrophobia, regarding it as a myth. He says he and his assistants have been bitten many times, but never have felt any ill effects. In conversing with him about the canines, he said that the Spitz are going out of favor, and are about extinct in this vicinity on account of their treacherous disposition and the prejudice raised by the cry of hydrophobia. There is no law in Boston requiring the externination of cais. Mr. Watts f

DEATH BY POISON.—Some scoundrel on Friday last gave poison to Mr. J. Olis Fellows' cocker bitch, Little Buttercup, and the poor dog is dead. She was an extra fine field dog, and when only a puppy, before she was eight months ofb, had

160 ruffed grouse killed over her. She was a litter sister to Sailor Boy first prize at Rochester.

### KENNEL NOTES.

Bob.—Westminster Kennel Chub's Palias to Dr. Jaynam's Bob.

NAMES CHAMEED—Brow. Mr. Satterthwatle claims the name of
Bran for his setter dog puppy, out of Delta by Ray. Meg.—Mr. F.
Satterthwatte claims the name of Mag for his Irish setter bitch
puppy out of Maul by Dan, from the Remnels of Mr. Horace Silsby, Seneca Palls, N.Y. Grip,—Mr. F. Satterthwatte claims the
name of Grip for his setter dog puppy, out of Nilsson by Druid.

P. Bonnett	3	5 0	4	3	4-39 $4-33$
NEW OBLEANS VS. DENVER.—The much spoken					
expected match by telegraph, between a picked ter New Orleans and a team of the Denyer (Colorado					

The weather was against the representatives of New Orleans, for all the time they were shooting the sky was heavy with clouds, the wind shifting, though not very high, and there were frequent showers of rain. The men did their best, however, and the score, under the circumstances, is a good one.

shot Oct. 3.

The New Orleans team was to shoot between noon and sundown, and at 12:55 the first man (Guerin) was called to position at 200 yds. Previous to this, however, Gen. John Glynn and Col. W. T. Vaudry, representing the Denver team, had inspected the targets, meas-

Previous to fins, noweer, tear, and toyin. And Cost. "Yacdtry, representing the Denver team, had inspected the targets, measured the distance and attended to all the preliminary details.

Capt. Dudley Selph, caption of the New Orleans team, suggested
to the representatives of the Denver riflemen that time could be
gained by allowing two men to take position and shoot alternately,
then Glynn and Col. Vaudry accepted the suggestion, and Miller,
the second man on the last, was called up.
Guerin simed and fired, and the red disk was shown at the target,
and, as some one remarked, "That is good for a start." Miller
fired and made 3. The figure was a dampener as a beginning for
him, as he was expected to do better; but he was generally credited
with nerve, and confidence in him was not lost. After firing five
shots, Guerin and Miller gave way to Sporl and Watson, and thus
it went on down until all the men on the team had made one-third
of their score, and the roll was then again gone down.

For a time, as the shooting progressed, every one was confident
that an average of four would be made, but a couple of threes in
succession by Watson and Gerties soon lessength the feeling of certainty; and when on the last round Pranklin's gun gave out, and
he was compelled to take another, all hopes of four all around
were lost.

he was compelled to take another, all hopes of four all around were lost.

Franklin had been making four and five straight along, and when on his eleventh shot he made but two, every one knew that something was wrong. He tried the gun once again, and the score showed up three, and then he gave it up, and submitted his gun to the inspection of Capt. Seiph and the Denver representatives, it was found that the lock was out of order, and that he trigger from a six-pound pull had failon to a hair pull, and could be compelled to commence the round over. He had been using a Remington rife, and he replaced it with a Springfield, but as Springfield cartridges were not at hand, he attempted to use the Remingfield cartridges were not at hand, he attempted to use the Remington shells. The result of the first shot was a goose egg, the next was but 3, the next a goose egg, and then the cartridges were changed, and in his next two shots Franklin made 8.

By the accident certainly 8, and possibly 12 points were lost to the New Orleans team.

The official score of the shoot stood as follows:

Total.

A dispatch was then received from the Denverteam saying: "We have shot, and made a total of SS2." This would tie the score, and until full particulars were received it was impossible to tell which of the teams had wen the match.

From Denver then came the full score in the following dispatch: Denver, Col., Oct. 4.—The members of the Denver Rifle Club

shot at their range in West Denver, the terms being 15 shots each, 200 yards off-hand. The rifles used for the match were Sharpes 1878 mode, military rifles, adapted to government ammuniton, open sight and trigger, pull six pounds and over. The following is the

١	score made by the club :													_	
	P. C. Moore	400000000000000000000000000000000000000	0 4 4 4 4 4 4 4 4 4 4 4 4 4 4 4 4 4 4 4	4 4 2 5 4 4 8 5	44445540	+4555444	55444345	44454431	4 3 4 4 4 4 4 4	1445444	4544345	0 2 4 3 4 4 3 -	5454444	3344544	4—52 4—53 4—58 5—63 4—61 4—61 3—56

Total.

By a comparison of this score with that of the New Orleans team, it will be seen that the home team win under the rules. Each team scored two goose eggs, and honors are cere no that score, but the Denver team scores three twos, while New Orleans have but two to their credit, and, therefore, are the victors.

The Denver men, taking it to be a perfect tie, telegraphed:

Desvap, Col., Oct. 4. "The rific match being a it, and individual processing of the processing of the processing of the teach instant if agreeable.

# Gricket.

ENGLISHMEN VS. AMERICANS.

HE initial match played under the auspices of the Cricketer's Association of the United States, between American and English resident players of America, selected from the members of those clubs belonging to the Association, was played at Nicetown Pa., on Oct. 6 and 7, and resulted in a draw. Heretofore this in Heretofore this interesting match has been played at intervals during the last twentythree years, the teams being selected by cliques of those most interested in the game at the time, and in consequence they have not On this occasion, been thoroughly representative. teams may be considered as having fairly put forth the strength of each nation. The English twelve contained six amateurs and six professionals; the former were W. S. Patterson, of the Cambridge professionals; the former were W. S. Patterson, of the Cambridge University eleven of 1878; Kessler, who fielded so well in the Canada-United States match; two of the brothers Hargrave, "Old Nelly" Pearson, the ex-professional of the Philadelphia Club, and Movan, the all-round expert and "How's that" of the St. George Unfortunately, Cross could not leave his business, so Giles Chile Sr., took his place, being one of the six pros. The other five were good ones, and England came to the front with the strongest team ever presented in a match of this character. We cannot say s We cannot say s much for the American side; true it was first-class, but the two Thavers, on whom we hang our faith, could not get away from college, and their places were filled by Messrs. Caldwell and Morris, also fine players. While waiting for the bell to ring to clear the we had a friendly post-mortem converse with Mr. G. M. grounds, and the only one on either side who had played interna-tionally over two decades ago—"such is life." In olden times all contests of this kind were regarded with deep interest. The Englishman then had the call and numerical odds, such as sides of eighteen and fifteen were pitted against them; but of late years Young America has picked up so grandly that the match has resolved itself into one that is contested on even terms.

The morning was charming in the extreme, and the soft, mellow light of the autumn sun made it the perfection of a cricketing day. The wicket, usually so good, was soft and spongy, and the ball cut np and bumped badly as the day wore on. Eleven o'clock was the hour announced for the start, but a half hour was wasted by the Britishers in selecting a captain, then the word was passed around the ring that Pearson was the chief and had been lucky in the toss. Every one expected to see the Americans take the field, but they were sent to the bat, and when their opponents turned up they did go with a baker's dozen. A roar of laughter announced this mistake, and Gregg of the Girards, the old man, was consoled with the office of empire, a position he proved himself utterly unfit to fill. factory whistles and farm horns were sounding for twelve o'clock when G. Newhall and Morris went to the wickets opposed by the when G. Rewight and aloris went to the strates opposed by the bowling of Lane (left medium round) club-house end, and Brom-head (slow round) lower end. The field, in the opening over, was placed as follows: Joe Hargrave, at the wicket; Kessler, point; Patterson, cover point; Giles, short leg; Smith, long leg; Moeran, mid-on; Tyus, straight drive; Brooks, long off; T. Hargrave, slip; Bromhead, third man, and Pearson, long slip. On Lane's fourth delivery, G. Newhall was missed by Kossler next over from the same bowler was given out leg before. This bad start was followed by still worse luck, and it was not until R. Newhall and Law got together that the score increased. The former. after making several boundary hits to leg and the on, departed with a dozen. Law then settled down to what resulted in the largest individual score of the match. During his stay he saw eight of his companions out, and his 54, which was made up of eleven 3's, two 2's and singles, was an exhibition of good all-round cricket, com-bining grand defence and fine hard hitting, including one slice of bining grain detents.

It is the next highest scorer, played well for his fifteen, and with the last man out the tens showed two less than a hundred. The fielding during the innings was by no means first-class, but of the five that handled the ball, Lane's magnificent bowling more than counterbalanced the poor support, as the analysis will show. Total 98.

Bromhead and Brooks, at a quarter to four P. M., took their places at the wickets, faced by the bowling of Clark (fast round), lower, and Brewster (slow round), upper end. The field at the opening was placed as follows: Van Renssalear at the wicket, Brewster, point; Caldwell, over point; C. Newhall, slip; H. Hargrave, long slip; Law, mid off; D. Newhall, deep long off; Morris, mid off;

G. Newhall, draw; Moore, short leg, and R. Newhall, long leg. Bromhead began at once a very free innings, and had quickly secured 9, when he skyed one from the slow bowler to deep square leg, which, though badly judged, was finely held by Dan Newhall. Smith followed, and with the score at 15, C. Newhall (fast round) supplanted Clark. The new coner at once showed splendid form, and commenced to score rapidly. Brooks, however, in hitting the slow bowler to leg was beautifully caught low down by Moore at draw—Tyers came next, and both battemen troubled the scorers until 31 was up, when D. Newhall relieved Browster. Runs continued to come, atthough Moore dropped an easy one from Smith, off C. Newhall, when the battemen had contributed 15. When the score had increased ten runs Law was handed the ball by C. Newhall, and Browster resumed at D. Newhall's end. When time was called at five r. M. the total stood at 45, of which Smith had assisted with 16 and Tyers with 18. Both innings, however, contained a slice or two of luck.

The fielding of the American team was by no means up to the mark, and the bowling, with the exception of Law's, bad.

SECOND DAY'S PLAY.

On resuming on Thursday at twenty minutes to 11 A. M., Smith and Tyers, the two not outs of the previous evening, resumed their places at the wickets. The former had already secured 16 and the places at the wickets. latter 18. Law opened the bowling from the upper end and sent down a maiden to Tyers, and Brewster followed. Tyers was bowled by Law, his score marked with two 3's, two 2's and singles. W. S. Patterson, of the Cambridge University team of 1878, joined Smith. Law's sixth over was a gent, but Smith defended his wicket finely. Patterson drove the slow bowler for 1, Smith lifted him to the boundary at long off for 3, and each batsman added a single, at 57, D. Newhall relieved Brewster, and in his ond over tempted Smith to let out at a Yorker, which went straight to Law's hands at mid-off. His score of 27 was obtained in the best professional style, and contained four 3 s and singles. The veteran Joe Hargrave partnered the Cantab, and the latter got Law beautifully to forward square leg for a triplet. thus far had been a great improvement on that of the first day, and Law particularly was bowling in grand form ; nor was the batting at all behind. Patterson handling the willow in such a manner as to call forth much deserved applause, his late cutting being clean and well placed. At 69 Clark supplanted Law, and Patterson cut him prettily through the slips to the boundary. In his next over J. Hargrave hit across at a straight one, and his middle stump turned a somersault. Toni Hargrave followed, and the score slowly When Patterson had secured 16 Van Renssalear missed advanced. him at the wicket off Clark, but avenged himself after the batsman had added 1 more to his score, by stumping him finely off the slow bowler. Patterson's stay at the wicket had been productive of 17 runs, obtained by very pretty cricket. Kessler joined T. Hargrave, and file latter was at once sharply caught behind the wicket by Yan Renssalear, off Clark. J. Pearson partnered the Staten Island favorite, who "brought down the house" by hitting the slow by hitting the slow bowler over the ropes at square leg for 4. Brewster then too Newhall's end, and C. Newhall went on in place of Clark. former only sent down one over, when D. Newhall resumed with the ball. Both batsmen got the slow bowler to leg for 3 each, and 90 was on the board. C. Newhall changed ends, and Pearson poked the ball into Caldwell's hands at forward square leg. ran filled the vacancy, and drove the last ball of the over for a single, thus bringing the score up to a tic with the Americans' in nings Wessler added two singles, and three figures were posted. Mark then took the upper end, and Moeran in attempting to drive him got under the ball and skyed it over the bowler's head, where it was grandly taken by Moore, who had to run thirty yards to get it. Giles came next, and Kessler got both bowlers finely to leg for a 3 and a 2. At 109 Law relieved Clark; but runs continued to come, Kessler hitting freely to all parts of the field and Giles showing fine defence. At last, however, the former was too late for a ripper from Law, and retired with the good score of 26, which contained one 4, four 3's, two 2's and singles, all obtained by fine .Lane, the last man, joined the New York professional, and a cheer appropried his run out the next ball, leaving Giles not Play was resumed at fifteen minutes to two r. m., George and

Charles Newhall at the bat, opposed by the bowling of Lane and Bromhead lower end. The former opened the score book driving Lane finely to the off for three. Bromhead followed with a maiden, and C. Nowhall got Lane to the off for a single. Bromand sent down another maiden, and G. Newhall's middle stump head sent down another mader, and G. Newhan's middle stump fell to Lane's third delivery in the next over. Moore followed and just escaped his predecessor's fate. The next ball from Bromhead took C. Newhall's wicket, and a groan went up from the grand stand that was echoed around the ground. Law filled the vacancy only to be bowled the first ball. Browster followed suit. This was a slaughter of the innocents, and the English stock went booming. R. Newhall went to the wicket in deathlike silence, but sroused a cheer that might have been heard in Germantown by hitting Bromcheer that might have been head of definational by incling bean-head to leg for 4. Moore then cut Lane to the ropes for a 3, and R. Newhall wheeked him to leg for a couple. The stand of the in-nings now took place; runs came fast and furious, and the tims showed 20 up. Six minutes later they were changed for 30, when Smith took Brombead's end. Brombead then gave R. Newhall a life by missing him badly at deep on-field off the new bowler. Lane's next over R. Newhall hit him to long leg for 3, and placed the other bowler to same place for a single. Although the score kept increasing, the fielding was in all respects first class, Giles very nippy, and Tyers at cover point especially distinguish-It was not until the score had reached ing himself. Newhall fell a victim to a rattling catch by Patterson at deep square leg, off Smith, after playing a rattling innings of 24, made up of one 3, four 2's and singles. Clark joined Moore, and as Lane's eleventh over yielded six runs, 50 was up. In Smith's next, however, Moore was disposed of in the same manner as R. Newhall, after hitting hard for his score of 19, which contained three 3's. one 2 and singles. R. Hargrave followed, and Smith got Clark's middle stump. Caldwell, the new comer, and his partner each added a single, when the former hit the ball into Moeran's hands D. Newhall joined R. Hargrave, and after getting two singles T. Hargrave relieved Lane. D. Newhall drove couple, and R. Hargrave snicked a slow one from T. Hargrave to Bromhead at slip. Morris, the eleventh man, went to the wicket, and D. Newhall hit T. Hargrave to the ropes at long on for 3, and Smith to long leg for same figure. Both batsmen began batting freely and well, punishing Smith badly to leg, and a dozen runs were added to the score before Smith got in on Morris' wicket. Van Rensselear came last, and Lane went on at the lower end, vice Smith. The newconer hit Lane to the off for 3, D. Newhall to the same place for a couple, and then placed him to draw for a single. At 84 Bromhead took the ball from T. Hargrave, and with two more added to the score Van Rensselear succumbed to Lane, leaving D. Newhall to carry his bat for an excellent imings of 20, in which there were three 3's, two 2's and singles. Total, 86.

which there were three 3's, two 2's and singles. Total, 86.

This left the Englishmen but 65 to make to win, but as there was was only fifteen minutes before calling time at five o'clock, it was agreed to prolong the game a quarter of an hour longer. head and Lane went first to the bat, against the bowling of Law and C. Newhall, without scoring. Lane hit the ball to Brewster at mid-on. Moeran came next, and after Bromhead had contributed for the former fell to a shooter from C. Newhall. Brooks followed and Law bowled Bromhead with a ripper. Smith joined Brooks and played Law's first ball on the wicket. Pearson filled the vacancy as the sun sank behind the woods, making the light very gray and difficult to play in. Brooks then got C. Newhall to long leg for 3, and Pearson drove him to the ropes for a like amount. The cheers from the English clique were deafening, but changed into a howl of dismay as Law upset Pearson's stumps the next over. The excitement became intense as Tyers partnered Brooks. Five runs more were added to the score, when time was called and the match ended in a draw. In every respect the finish was an exact counterpart of the Canadian match, and the rapid dropping of the Englishmen's wickets can be attributed solely to the fact that it is impossible to play cricket in the dark. Subjoined is the full score :

# Dachting and Boating.

SINGLE HANDED CRUISING.

THERE is a wonderful charm about single-banded sailing, as these who have ventured upon voyages alone are ever ready to resert. The labo of daring and romanew which naturally surrounded states and the property of the laboration of laboration of the laboration of the laboration of laborat THERE is a wonderful charm about single-handed sailing, as

the new cand or a fortuno before venturing around Cape Ced during the madeanimer heighdays. With 2500 and a little grit there is more sport in yachting than with 250,000 and a little grit there is more sport in yachting than with 250,000 and a lindsman spottering in smooth water:

"On my arrival at Cowes, a gentleman, whose acquaintance I then made and am pleased to relain, came alongside the Procyon. He was sailing alone in a little decked yacht of five tons, specially built for the purpose somewhere above bridge in the Thames, which can be also the procession of the purpose somewhere above bridge in the Thames, which clean. In conversation be informed me that he never receipted to turn to windward at sea, now—mentioning names—fild any offer single-handed sailors he knew of. The fact is, that his local, like theirs, had length and breadth with very little immersion, consequently was not adapted to sail to windward in rough water. "The reason for making these comments is, that I wish amateurs endued with the national spirit of adventure, and disposed to exercise proper judgment, not to be deterred from seeking health and pleasure on the sea by us-cless exaggeration of the difficulties to be encountered. If they desire to become prodictent in the art of see-sding, before undertaking long passages, they should perseveringly practices that except cert beam and three or four test dranght and never neglect practicable opportunities of turning to windward is rough water; moreover, the attempt to make them do so, when the foretood and the rudder are alternately "pitched" out of water, besides the discouraging effect of their necessarily leewardly qualities, is extremely dumperous and internal processing because it is also some and manual, by Dana, Jr., which treats only of ships, and not of botte. After the first season, passed in the lower seal has difficult drangling processing and the rudder are alternately "pitched" out of water, besides the discouraging effect of their necessarily leewardly qualities, is extremel

on the contense, in so far as this advice is proffered by way of instruction take his hoat into harbor should contine his sailings to narrow waters.

"That mismanagement, miscalculation, inattention or maxodable accident may render any sailing serious, I shall show by the mishaps that overtake more powerful and better found craft than those of which I am speaking. Every practical man is aware that boats of insufficient draught and power to gain a weather shore or port mader short carvas, in the event of a sudden storm and shirt or wind, and which can neither be trusted to run round a headland before a high sea, nor ride out a breeze at anchor, are exposed to miscar product the content of

mizenmast, in height 13 feet above the gunwale, is stepped just within the transome; thus there is a clear drift of 26 feet between the masts.

"Tersons viewing her suppose that the mast being so far forward must tend to pay her head off when reaching or closechauled; thus the mast sell and the property of the part of the part of the mast feet to herself in a breeze, closechauled, invariably tends to wind, whether the mixen is set or not.

"The mansail—of No. 5 double, 2 feet cauras spill—is a working lug, with an upper tack-tackle hooked into an extra cringle above the time of the part of peaking the sail, and a lower tack-tackle at the foot of the mast for trimming it. When the lower tack is triced up the sail works clear overhead, enabling one to work forward on deck with safety. The length of the yard is 13 feet, the head of the sail 12 feet, and the foot 18½ sets sailwith yard is 29 las. Thus storms and 13½ feet on the foot. The hoids it she same and its weight with yard 50 lbs. It is necessary to state these particulars to account for the time expended in making or taking in sail, and to account for the time expended in making or taking in sail, and to account for one's hands getting into such bad condition after every two or three days' cought encantier with the elements.

"The riding gear consists of 30 fathoms 5-16 chain, a base rope of 40 fathoms, and another of 25, besides sundry pieces of manila, to supply lethicancies and for mooring ropes. There are three anchors—38 lbs., 28 lbs., and 28 lbs., and 28 lbs., and 28 lbs., and 28 lbs., and 28 lbs., and a supple.

"All because in the said continued the said of the boat in larbor; an American chair with arms; a lability to the father platform, and worked out with a zinc hand-pump; filter in basic-work; a two-gallon work tank, of finds—tubber, stowed beneath the after platform, and worked out with a zinc hand-pump; filter in basic-work; a two-gallon boat tank, of finds—tubber, stowed beneath the after platform, and worked out with a zinc hand-pump; filte

coffee I could biy in Lobdon, cane, biscuits, jams, sweethecuts and tobacco.

"What with my wardrobe contained in three sail-bags and a port-manteau, and the handred etceleras, such as coffee-jot, tea-pot, rockery, glass, knives and forks, etc., etc., all of which had a proper place assigned them, without which had the articles connecrated would have been useless; topping all with about 200 lbs. of new rope, sparit takels, strays, etc., sorted and secured with yarms to the fambors along the side of the such content of the fambors along the side. I have been a man less easily satisfied than I am who could have viewed the significant confusion regiming in the domestic department at starting otherwise than as evidence that he was well found, even though champagne and pate de fois gras were not included in the list of necessaries." ----

### THE OTHER SIDE.

Editor Poyest and Stream:
Ever since receiving a patent for my "Light Draught Nonpateh"
model I have persistently advertised in your paper, and therefore
ask that, as a mere act of justice, you publish what little I have
to say entire, or not at all.
With the extreme and utterly untenable position you assume in
your late editorial, "Trimming by our Sally," I have nothing to do;
in fact, "high vaulting, with three turns in the air," has always or
annised me that I have been inclined to excess the late? I dealer of dignity

one fact, "high variting, with three turns in the six," has always as a solid fact, "high variting, with three turns in the six," has always a first of the six of dignity. What, I do find fault with, and sak you to modify, as an unjust and uncalled for fling squarely at my special type of boat, is the "relectibles war" you claim to "wage, without fany qualification, against "light displacement, light draught, entireloard and llat floor," taken by themselves, without fany qualification, against "light displacement, light draught, centreboard and llat floor," taken by themselves, as a solid or course, which is misleading some men, with more money than boating experience, fairly on top of "mud dais," which are, at least, so far under water that bey a light of the side of "mud dais," which are, at least, so far under water that they are the side of "mud dais," which are, at least, so far under water that they are the side of the sid

We seek nothing but the best yacht and the best sailor at her

We add that our remarks never were directed against our corres bordon personally. If we tread on his corns occasionally, it is because they happen to lie in the way, not because we seek them. The boats Mr. Clapham builds have their own special field and can live alongside of the deeper craft. We know his work to be unsur-passed in strength and linish, but we must be allowed our own

Counce Round.—A friend, whem we may call the "sloopiest of sloop men," has repented of his ways. It is not long since he argued ably in our columns on the side of the sloop. He scorned the cutter, langhed at lead, and in his errait wanted big hosts and a broom-stick spiked aloft for a topmast. The rest was English monsenes, so he wrote. This is how he acts: With a match on head with one of the smart ones, the iron pigs have been tessed over the side, lead cast to fit the heats has taken their place, the topmast is a goodly sized stick and fids up aloft in tine weather only, but comes down by the run in a thresh to windward, and beloid! one of the ablest champions of the sloop in her pristine clumsiness, stows his big jib in the loft, sets up a forestay and comes out for a race with double head sails! Well, sloop men, after all, finally become sailors and take to the cutter kindly. In a midd form at first, but step by step the rest follow as they learn. With the new convert on our side, we do not despair of seeing all hands follow in very short time, and the sloop will become a rig of our forefathers even in New York, where light drafts, and pound sailing, and racing machines have so long held sway and crowded out the sailor's yield.

A Brake for Stramers,—The South Boston Inquirer ways that the experiments with the steam launch Aquarium are a success. She stops her way by means of a pair of submerged "winga"— fins seem more appropriate—in less than a quarter of her leight.

ams seem more appropriate—in less toan a quarter of her ringin.

Sourm Boxron Yacure Cun will have a series of six meetings and a fancy dress party at Halleck's Albambra during the winter.

Committee, Messrs. L. F. Pond, R. Diskrow, S. R. Cann, C. T. Haley, J. Winnatt and A. Betton. The club house is to be put in thorough repair.

thorough repair.

MISCHIEF.—A correspondent writes that the original design of the Mischief called for three tons less weight in her construction, and that with this additional amount of ballast she would carry her rig oven better than she does.

PORTLAND YACHT CLUB.—One season ago, fifty-five "foreign" yachts sought Portland harbor as an anchorage during their cruising. This year one hundred and nine put in, many of them of large tomage. This shows how the cruising spirit is developing, and that Portland is becoming a popular port of call.

A SAFETY III.6.—Concerning McLeod's arrangement, whereby the rig and not the hull is capsized in a squall, a series of successful experiments have been made a week ago. A letter to the Seculific American says:

experiments have been made a week age. A letter to the Scientific American says:

"The Jane was an especially dangerous-looking eraft, eighteen or twenty feet long, whose bottom and deck formed the sharp V-shaped edge which proclaim an entire want of bearing power, while her immense sails, main and jib, were ample for a boat of twice her dimensions. Her englaim was a New Zealander, whose motions were the reverse of safety-inspiring. My own conceptions of the care needful under the existing circumstances had no place with him, and, but for entire fault in my ability to swim, I should never have contract.

her dimensions. Her captain was a New Zeatander, whose motions were the reverse of safety-inspiring. All yown conceptions of the care needful under the existing circumstances had no place with him, and, but for entire fant in my ability to swins, I should never her activities that the same and the place had been described by a bload more than the same and the place had been described by a bload more than a strict of the same and the best more than sufficient for instant destruction. In voluntarily I made ready for an impromptu bath, and the bestman tamingly called out, 'What'd I tell ye J but only the mast yielded. The boat came to her bearings and moved on as steadyly as though impelled by the militest zephyr. The trimph was already complete; but more was to come. Presently we were in a large seaway, and, with our good speed, a large indow of sea water over the low and sharp how was a matter of course. In that, also, I was agreeably disappointed. The boat, instead of carrying the weight of the wind and being than forced through the sea, took to it, and yielded to the notion of the foat as easily as before it yielded to the notion of the foat as easily as before it yielded to the notion of the foat as easily as before it yielded to the notion of the foat as easily as before it yielded to the motion of the foat as easily as before it yielded to the motion of the foat as easily as before it yielded to the motion of the foat as easily as before it yielded to the motion of the foat as easily as before it yielded to the body and an making misery for her passengers, was simply spilled 'over the top of the sail. The notion was free from the thumps and jars usual under the same circumstances.

"How all this was accomplished may be difficult of explanation without the aid of an engraving. Instead of being 'stepped' in the usual way, the mast was held in a recking shalt at the deek, and to haked, on either side, springs were strached, having their opposite ends secured under the deek. Thus the mast, in the absence each s

He was fortunate enough to extricate himself, but was exhausted and within an acc of drowning. Moral—Stand clear of running gera and coils.

NEW York CANOR CLUB.—The captain of the Dott, winner of the challenge cap in the September regards, having received many challenges, waived the thirty day himit and smid- for the trophy over the club course of New Frighton, 8. 1., October 9. The critical coils, of the course of New Frighton, 8. 1., October 9. The critical coils, Greeken, 6. Gostendiffer: Psyche, C. H. Montoe; Kuleslah, E. E. Oudin; Queen Mab, C. P. Oudin. Course from club house for red can buoy, off Bay Hölige, thence to Robbis's reef bony and home, about three and three-eighths of a mile. Wind light from south; tide abb. Doit went to the force Chochette, first-then and the Queen following in the order named. Clochette was the first to round the red can, Gretchen second and bott third. Kaloolah capsized, and Queen Mab went to her rescue. By the time the second mark was reached the Dot had spin out a good lead which she maintained to the inish, thereby winning the cup for the second time in attecession.

### PUBLISHERS' DEPARTMENT.

A LARGE STORE—Of all the large gun stores in the West, that of J. Palmor O'Nell, in Pittsburg, will tank with the best. Mr. O'Neil has a very large stock of line guns from the best makers, including the Scott, Greener, Purdy & Dougall, as well as a good line of American guns constantly on hand. His store is large and well arranged for the business.

ranged for the husiness.

### Answers to Correspondents.

### ; " No Notice taken of Anonymous Communications.

E. J. A., Pittsburg, Pa.—See our advertising columns for wild rice for sale.

Brom Bones, New York .- 1. Pack the quail on ice. 2. For wild turkey use BB.

- R. S. D. N., Washington, Pa.—Your inquiry was answered in our game columns, Sept. 30.
- S. S., New York .- When is the law off quail this year in Connecticut? Ans.-Oct. 1.
- H. W. K., Deposit, N. Y .- The Bogardus cartridges are said to be eafe; we have tried them with success.
- M. F .- We have no records of Monarch of the Seas, Apply at office of American Lloyds, 26 Burling Slip.
- M. M. M., Ripley .- Have no records of brig Adelaide. Write to American Lloyds, 26 Burling Slip, N. Y.
- J. W. P., Philadelphia.—The number containing report of archery meeting at Chicago was that of Aug. 8, 1878.
- J. N.. New York,-You will find nothing but barnyard fowl about Locust Valley. See another reply for duck season.
- F. N. B., Columbus, O.—Have written to learn about the pistol. For other inquiry see another answer in this issue.
- A. H., Cuero, Texas .- It is safe to shoot the 5 drs. of the black powder in the gun mentioned, provided the gun is all right.
- C. A. P.-It will not damage the canoe to let her remain in salt water for a long period, but better haul her out. No great job.
- J. G. K., Indianapolis, Ind.—For a 12-bore gun in prairie chicken shooting, use No. 8, 3 drs. to 31/2 drs., according to weight of gun. C. F. N., Woods Corners.—You can clean brass shells by immers-
- ing them in some weak acid—vinegar will answer—and then rubbing ôff
- F., Buffalo.—No new edition yet of "Kemp's Yacht Designing," but only of his yacht and boat sailing, which deals of building small boate
- R. G. C., New York .- The ordinary vascline, if pure, will answer for your gun. It will not injure it, and will prevent rust. Apply
- D. A. C.—For 16ft, yawl boat use lug sail. Hoist, 10ft.; foot 10ft.; head, 7ft., of which 2ft, is forward of mast; peak to yard, about 40 degrees.
- L. F. D., Cohocton.—The expansion of your brass shells is probably due to a fault of the chamber. Take the gun to a gunsmith, and have him examine it.
- . G. B. C., Worcester, Mass.—1. Write to the Secretary of ye state. 2. The regular brands of black powder are all reliable.
- The kind you mention is fair. C.S. G.—Zinc, sheet-lead or tin; or cise lay a coat of asphalt sheeting, and plank over with light stuff. Or simply double-deck with coat of tar between and caulk.
- P., Yalaha.—For boat 19ft.x9½x2½ use cat rig or lug sail. Hoist 2lft., foot 2lft., head 12ft., peak to gaff 40 degrees, if a lug. The head should be 22ft, with 5ft, forward of mast,
- W. B. R., Welland, Ont .- You can use with safety the ordinary length shell, and also the long shell, in a rifle chambered for the extra long, but probably with not such good results.
- R. S.-For photos of American yachts send to Black & Co., 333 Washington st., Boston. We have some assorted English photos of all kinds on hand. Can be forwarded for 50c, a piece.
- X. Y. Z., Lockport, N. Y .-- We cannot tell you where to go within thirty miles of your own town for good quail, partridge and woodtock shooting. Perhaps some of our friends can furnish the information.
- A. L. E., New York,-1, The 16-bore is pretty small; we should refer a 12. 2. See our game reports from Long Island. 3. Long Island is governed by the State game law, with the exception of
- D. W. H., Philadelphia, Pa.—There is no book containing just the information you want. We shall soon publish a series of articles on the subject, with special reference to the wants of just such per bons as you speak of.
- G. H. W.-Small sloops can be sailed from Oceanic to Hayre de Grace by outside passage around Cape May, thence to Delaware rity and through Sassafrass canal to Chesapeake and up the Susquehanna. No inland passage.
- C. M. C., Pittsburg, Pa.—Please inform me through your valuable paper whether woodpeckers do or do not support themselves on trees by means of their tail to some extent? Ans. Yes, the tail is employed as a partial support.
- 8. S., Danbury, Conn.—1. For the general shooting mentioned, should advise a 12-bore. The choice between a 12 and a 10 is largely a matte of taste; the shooting is practically the same. 2. Ve; a satte gun should stand 4 drs. powder.

- H. O., Jr., New York .- 1. To waterproof your shooting-coat, use following mixture : To 6 oz. hard vellow soap add 116 pint water. and when holling add 1 th. patent driers and 5 lbs. boiled linseed oil. 2. The cardboard wad is equally good.
- F. R. D., New York,-There is no law that we are aware of in Westchester County prohibiting the shooting of robins after Oct. The supervisors of that county can inform you. We have applied to them on the point without response.
- G. F. S .- Place your steam yacht on file at Manning's Agency. We do not dead in any property. The road steamer and boat combined would be difficult to place on the market. Doubt if there would be much demand for such a combination.
- J. F. J., Amesbury.-Protest cannot be entertained, as your rules specify that all protests must be made within half an hour after the race. If the judges have the jurisdiction we should anyway counsel waving the protest, as not flying the club colors in no way interfered with the sailing.
- II. A., City.—The New Jersey open seasons begins as follows: Quail and pheasants, Nov. 1: woodoock, Sept. 1; rail, Sept. 1: up-land plot er, Aug. 1: summer duck, Sept. 1: recel birds, Aug. 15; deer, Oct. 15; squirrels, 1; rabbits, Nov. 1; black bass and pickerel are the only fishes to be eanobt now
- F. B. T., Platisburg. -1. Do not know where to refer you for the rates. rates. 2. For pigeon shooting with a 10-bore, 10lbs full choke, and 5 drs. powder, use 1½ oz. No. 7 or No. 8 shot; or No. 7 in one barrel and No. 8 in the other, 3. Wild fowl season in New York is from Sept. 1 to May 1; Long Island waters, Oct. 1 to May 1.

MIVED -One whistle signifies to go to starboard, to do which the usual helm is ported. Two whistles means an intention to pass to port. Then starboard your helm, How your wheel goes has nothing to do with it. Some work with the helm, others opposite to it. Therefore, all signals of the rule of the road refer only to the helm leading forward.

W. G ....Arrow belongs to Mr. Ross Winans. Is now laid up at W. G.—Altrow belongs to Mr. Ross Williams. Is now had up at Baltimore. Was built in 1874 by Kirby, of Kye, Westehoster County, N. Y. Over all, 65½ft.; water-line, 611½; beam, 20ft., 2in. hold, 6ff, 45ft.; draft, without board, 5ft., 4in.; cubic contents to outside of plank, 3.847.51ft.: hoist about 60ft.: boom about 65ft.: gaff about 35ft.; bowsprit, outboard, about 28ft. Mischief has about 61ft, hoist.

- S. S. G .- I want a good, reliable, breech-loading, double-barreled gun, choke-hored, etc., and wish to know if there is any real uitility in the extension rib put upon all lately improved guis? Somo call them only ugly protuberances to knock knuckles against, and the hole into which the rib fastens, a catch-all for dirt, etc. Ans. The extension rib is a most decided advantage. It is simply added
- F. K., Jr., New York, -1. Is shooting allowed Sundays in Rock land county, N. Y? 2. Is there any kind of game to be found in Ramapo, N. J., or in any place along the line of the N. Y. L. E. and W. R. R. no further up than Sloatsburg? 3. Is there any fishing to be had in the Ramapo River? 4. Are small catible caught in ponds eatable? Ans. 1. No. 2. Ruffed grouse and in wet seasons woodcock. 3. A few pickerel and perhaps a very few trout.

Exsign, Bradford, Pa.—In a successful woodcock expedition in Allegheny County, N. Y., last week, we came upon a pair of quail with a brood of young ones that could not have been out of the shell Ans. The latching was a late one; very probably a second brood, or perhaps the first nest was destroyed by some accident. We have, however, seen just hatched quail from New Jersey early in November.

PLUVIER. Boston.-1. Is there any objection to use an ungrewad over the shot in a breech-loader? 2. What is the advantage of greased wads over the powder? I asked you recently what size shot to use for fall ployer at 60 yds., and you said it was impossible to answer such questions; so I experimented, and found that No. was the size to use, No. 8 being a little too small for late birds at that distance. Ans. 1. Better to use an ungreased wad over shot. 2. Lubricates the barrel. Your useful hints about pattern tests will be published next week.

- S. C. P.-Berthon's boats are not to be had in America. are pretty high in first cost, and with duty added would be expensive. They are also heavy for small yaclds. Some of our advertisers make a folding canvas boat, which may suit your purposes. Or else, have light cedar or white pine skiff built, say 8 or 9ft. long, square stern, slight crown fore and aft to bottom, and it with light zinc or galvanized iron air tanks under thwarts, making them life boats, even if filled. Weight, 40 lbs. No special oil stove for yachts made in America.
- P. S., New York .- I have a fine Scott gun, 10 gauge, cylinder bore, chambers a 27, inch shell—The end of the chamber is hardly perceptible to the touch.—On looking through the burrels I can see a fine line. I generally use 21/2 inch paper shell. I have a

number of 2% inch brass shells. Will the use of 2% inch shells in my gun cause poor shooting? Ans. The 2% inch shells will probably give in ferior shooting, but you can try it and may, perhaps, find the contrary to be the fact. It is not always possible to tell just what a gun will do under such circumstances.

Constant Reader. -Is there on record the weight of the largest striped bass that has been caught with a rod and reel? If please what is the weight? How large do these fish run? Ans. It is possible that the Cuttyhnnk Club have such a record, but we have not access to it now. Norris says (p. 82): "They have been taken with a rod and line as high as forty or fifty pounds," but no instance, and other angling books are equally silent. see them in Fulton Market from the middle of May to the last of June, weighing from forty to sixty pounds, and they are said to reach 100. These large fish are always females, and are caught in

A. F. C., Sunbury, Pa.-I notice you mention the Wickersheimer process for preserving fish in connection with the  $8\frac{1}{10}$  pound trout of  $\Lambda$ . B. Shipley & Sons. Will you please describe the process? Ans. It is the invention of Prof. Wickersheimer, of Germany, and consists of a fluid which is injected into the heart of an animal, and so through its circulation. We saw it at the International Fishery Exhibition at Berlin, where he had enormous scrpents which looked to be just dead, but which had been prepared for three years. Skeletons were prepared by immersion and were perfectly flexible, while the lungs of a dog could be inflated and respiration The eyes of the fishes were sunken, but they were perfect so. We learn that it is to be introduced into this country, shown. and it will be invaluable for preserving such objects as crabs, spiders, etc., which after two days immersion remain flexible, so that all natural movements can be made by the limbs and mouth.

H. N. R., Boston.—In August last I spent a week at Webster Lake, Franklin, N. H., and some black bass caught had small black spots in their flesh. Saturday I took a trip again, and in those caught found them full of the specks, and cannot find any one to tell what it is. I send you small pieces in glycerine, and if you will put in "Answers to Correspondents" what they are you will oblige a number of your readers. The lake is made up from Highland Lake Andever and springs; very clear and pure water. I have read Forest and Stream the past five years and have seen everything else about fish but these spots. Ans. We have placed the Ans. We have placed the flesh of the fish containing these spots referred to in the hands of a microscopist, who reports that they are neither clusters of para-sites nor encysted worms, but appear to be a cluster of pigmen cells, and asks if the strips were taken next to the skin or deep the muscular tissues. He finds these clusters to be harder than the surrounding muscle, and about one-sixtieth of an inch in di-ameter, after being shrunken in glycerine. To the eye, the strips of flesh with the black dots resemble the eggs of some batrachian,

REMINGTON'S MILITARY, SPORTING AND HUNTING REPEATING RIFLES.

THE MANUFACTURERS OF THE "FOX" GUN, FEELING THAT DEALERS, as a general thing, have not done justice to the merits of this WONDERFUL.
GUN, are determined to have them placed before sportsmen more generally, that their great merits may become better known and appreciated. It is needless to speek of THE ELEGANT WORKMANSHIP AND WONDERFUL SHOOTING POWERS of these guns. It is a fact well established that they are UNSURPASSED BY ANY IN THE WORLD. these guns. It i

IN THE WORLD.

We propose for alimited period to offer a line of these guns at the following EXRELIELY LOW PRICES, after which the original prices will be restored, our object
being to introduce the guns into sections of the country where dealers have failed to
present them; in the firm belief that where they become known they will be the
established favorite, and we shall reap the benefit in future of this great sacrifice.

Such Inducements Have Never Before Been Offered.

Sportsmen wishing to purchase one of these beautiful guns must respond at once, as the number offered at these prices is limited. FORMER PRICE. NOW.

# FOREST AND STREAM.

NEW YORK, THURSDAY, OCTOBER 21, 1880.

A LIVE PAPER.-In the last numbers of the Forest and STREAM were published communications and notes from more than eighty correspondents: and the "Answers" columns contained replies to forty-six others-a total of more than These writers represented twenty-four different States and Territories, besides two foreign countries. The same issue contained the advertisements of 175 advertisers, representing an aggregate capital of many millions of dollars.

In the number and character of the contributions of its friends the Forest and Strram is altogether unprecedented in American journalism. We are publishing a live paper, every week, and fifty-two weeks in the year.

Appreciating the continued courtesy of our friends, we cordially invite each one who can add to the general store to send in his quota.

FISHING FOR COUNT.-We have spoken in no uncertain tone upon several occasions of the destructive practice of killing small fish for the purpose of swelling the count. We intend to keep at it until the whole body of anglers join in the chorus and cry "shame" on the man who is guilty of it. The review of the report of the New Hampshire Fish Commission, in another column, contains something which all gentlemen anglers should read to every hog fisherman that they may happen to know.

GO AND SEE THEM .- In a little inclosure in front of the Merchant's Hotel in Cortlandt street are to be seen two quails, a sora rail and a gray squirrel. They are all in good condition, fat and lively, and seem to agree together excellently.

HOW THEY DO IT IN BLOOMFIELD

BLOOMFIELD is a little New Jersey village not very far from Newark, and if the reports which reach us are authentic, we do not hesitate to say that it will be a favorite resort for quail from this time forth. Certainly if these birds could read the Forest and Stream they would gather there in great numbers after they learned about Squire Hall and his Daniel-like decisions.

It appears that not long ago a certain Mr. Van Tassel, of the above-mentioned town, discovered not far from the rail-road depot a little bevy of quail. These innocent birds, well knowing that the close time in New Jersey had not yet expired, and on that account suspecting no evil, made no effort at flight or concealment, but quietly went about their ordinary avocations and fed along as usual. The sight of the bevy was too much for Mr. Van Tassel, however. He at once went for his gun, determined to secure those quail. No dog was required. The shooter knew a trick that quite casts in the shade the ordinary methods of sportsmen. He walked up to the unsuspicious birds, quietly herded them until they were well huddled, and then, giving them both barrels, s cured ten.

So far all was well. Matters had gone admirably for Mr. Van Tassel, if not for the birds, and the "sportsman" had already begun to consider the language in which he should announce his fine "sport" to his comrades, when the game constable appeared on the scene. Mr. Van Tassel was at once hauled before Squire Wm. R. Hall, and was promptly fined \$15 per bird and costs. He, however, appealed to the January Term of the Court on the main question, paying the costs then and there. We trust that there is no doubt but the higher Court will confirm the Justice's decision : but even if it should not do so, we presume that Mr. Van Tassel will consider that his fracture of the law has cost him more than it was worth, and that his birds were dear.

Some people in Bloomfield manage to get their birds out of season at a less price than \$15 cach. Thus Mr. Cadmus, going out with a dog, killed a quail, and appearing before Squire Hall complained of himself, paid his fine of \$15 and received the informant's half-\$7.50,

This is the way they do things in Bloomfield, and a most excellent way it is. We wish that a little of the same spirit could be infused into a number of other localities that we could name, and indeed throughout the country.

We are reliably informed that an individual, whose name we have, recently killed two quail near Newark, N. J., and exhibited them to sportsmen of that city. Is not this a case for the Essex Gun Club to take hold of?

### ---THE NEW YORK GAME LAW.

N another page will be found the admirable analysis Of the New York game law, prepared by Abel Crook, Esq., president of the New York State Association for the Protection of Fish and Game, and read before the last meeting of the Long Island Sportsmen's Association. This synopsis was made to show what the provisions of the law areat present, and also to serve as a basis for intelligent work in amending the law where it needs amendment, and of framing it in such a way that every one may understand it. It is published in the For-AND STREAM for these purposes. At the coming session of the Legislature at Albany, the Standing Committee of the State Association propose to present a new game law. and in order to frame one which shall meet the ap proval of sportsmen throughout the State upon every point of its provisions, it is desired to hear the views of all who are interested. The readers of Forest and Stream are called upon to study the law as it now stands, and if they have any suggestions to offer regarding any portion of it they are requested to write the same to the committee in charge at an early day, addressing all communications to Abel Crook, Esq., No. 99 Nassau street, New York city.

It is particularly requested that those who wish changes made should furnish facts to substantiate their arguments. The committee want the actual experience of practical men on these points. Having all the facts before them they can intelligently proceed in their work.

This is a most sensible way of setting about the task. The opportunity is now offered to every man to put in his

views on any particular point of the law. Let each one improve the occasion to speak, or forever after hold his peace. There is no good reason why the New York game law presented at Albany next winter should not embody the collective wisdom of the sportsmen of the whole Empire State. and be therefore free from cavil.

The committee of the Long Island Sportsmen's Association, who will consider the law with reference to Long Island and suggest any needed changes or special provisions required for that section, are Messrs. Geo. A. Chappell, Dr. Henry F. Aten, Dr. Wm. Wynn, Abel Crook, Austin Appleyard, Judge Henry S. Lott, Chas. W. Havemeyer, Sam. S. Conant and Henry Altenbrand. It is hoped that other game protective clubs throughout the State may appoint similar committees to discuss the law and report in the same way.

The Standing Committee of the State Association, who will prepare the law, are : Abel Crook, Robert Robinson and Henry Altenbrand, of Brooklyn; J. H. Williams, Dansville; Jacob Witmer, Niagara Falls; and Henry II. Morse, of Rochester.

Mr. Crook, who has had much experience in framing laws. proposes to make the new game law a model of brevity and clearness. It will be substantially (1st) a legal definition or construction of the words "close season," (2d) the provision of a "close season" for the specific birds, animals and fishes, (3d) the exceptions, (4th) miscellaneous provisions, (5th) uniform penalties, (6th) machinery for prosecution.

The officers of the New York State Association for the Protection of Fish and Game, and the Long Island Sportsmen's Association, who have charge of the next convention, are deserving of the highest commendation for inaugurating a new order of things and making the society what its name implies that it should be. Their course will be cordially indorsed by the sportsmen of the State, and many of those who have lost their interest in the society and held aloof from its conventions will now accord to it their strongest support. Believing that we voice the sentiments of the entire sportsmen's community we hasten to congratulate the promoters of this new movement, and to be neak for them a complete success in their efforts.

### SOUTHWARD

VITH the approach of winter weather those sportsmen who annually spend a winter at the South are already twning their thoughts thither and preparing for the campaign. From our correspondence we infer that Florida will be this year, as heretofore, the resort of the majority of Southern tourists. As is usual at this season of the year the Forest AND STREAM is in receipt of numerous inquiries for the best shooting and fishing localities; inquiries which year by year it is more difficult to answer.

The day has almost passed away-we shall rejoice to see it wholly gone-when game can be butchered from the deck of a river steamer. Every Florida visitor must be familiar with the savages hailing from Northern cities, who stand on the steamer's deck as she makes her way up the stream, and blaze away, right and left, before and behind, at every living creature on the banks—birds, beasts and reptiles. There is less of this digraceful business now than there was once, but this is due rather to a decrease in the supply of game than to any diminishing of the hordes of butchers or abgtement of their murderous craving for blood. And just here we may throw out a hint to the owners of the vast herds of wild cat tle which roam through the Florida woods. Bye-and-bye, when game becomes so scarce that the being clothed in yelveteens and brass buttons, bearing a gun and with it the general appearance of a rowdy, cannot satisfy his appetite for gore in the old way, he will turn his attention to your herds. and shoot down your defenseless cattle, until they too are exterminated. So will the price of Florida beef go up, and the famine thereof be ascribed to the political administration.

The man who seeks in the South pleasure and health, and who is contented with the legitimate pursuit of fish and game will still find abundant shooting territory in Florida, provided he turns aside from the guide book routes and leaves the regular circuit of the multitude. The southern and south-western portions of the State are supplied with a fauna which will well repay the journey thither. We have on hand a variety of letters relating to the different sections of

this sporting country, and these will be published at an early

While Florida stands first as a winter sporting resort, possi bly because it has been so much talked of, there are many other sections equally as attractive and equally rich in game. In the North and South Carolinas, Georgia, Alabama, Arkans Louisiana, Texas and in short throughout the whole South are vast tracts where game is abundant, and where the sports man tourist may find not only the best of sport but a hearty welcome among a hospitable people as well. The rod and gun are passports to good fellowship the world over, and no one feature of a journal like the Forest AND STREAM is more significant than its chronicles of the warm reception accorded by the people of one section to their guests from other sections.

### REPORT OF THE NEW HAMPSHIRE FISH COMMISSION.

THE report of the New Hampshire Fish Commission for 1880 opens with the statement that salmon culture in the Pemigewassett has been a grand success, and that they have taken over 100 000 eggs from tish which had been artificially hatched from eggs taken from the Penobscot River and planted in the Pemigewassett, and which had passed up the fishways over the dams at Lowell, Lawrence and Amoskean This is indeed a grand success, as the fish are proved not only to live, but have returned to their native streams to breed The Commissioners are inclined to think that the twenty-two fish taken at Plymouth represent the planting of three different years—1872, '73 and '75—as their weights varied from to twenty pounds; while one which passed their nets was found below Livermore Falls with several of his ribs crushed in and broken away from the backbone-probably in attempting to ascend the falls -which weighed twenty-eight pounds, and might have been a survivor of earlier attempts at stocking the river.

Brook trout have been distributed to many streams, and an increased number are expected this year. Land-locked sulmon eggs have been received to the number of 67,000 as their share of the crop of the joint stock establishment at Grand Lake Stream, in Maine.

The observations at the Lawrence fishway from May 5 to November 1 are interesting. No fish were seen until May 9, when two "suckers" (\*Cutastonus\*), and one brook trout were noticed; and on the 12th, alewives, suckers and two lampreys were seen, and these increased and decreased each day until June 2, when the record says: "Alewives and suckers run very large; a few lamper-eels and three salmon, ten to twelve pounds." (Why cannot our Commissioners set the angular a proper nomenclature, and not call a lamprey a "lamper-eel, when it is not an eel at all, nor even distantly related to it?) On the 5th "one shad" is added to the previous list, and a black bass also appears; while the alewives, suckers, "chubs," etc., keep right along, interspersed with an occasional salm until the 30th, when no salmon are recorded until August 27. and again on October 3, making about thirty seen during the

Commissioner Powers reports to Mr. Brackett, of Mass that 367,500 California salmon fry were distributed in January as follows: 25,000 to the Contoocook River; 28,000 in Salmon Falls River; and the remainder in the Pemige wassett, and that they could be seen until last August any where in the river near the hatching-house, and were ther from three to five inches long, and very lively and apparently Twenty-two Atlantic salmon (S. salar) were taken during the season, weighing from eight to twenty pounds each, thirteen of them being females, yielding together over 100,000 eggs. Mr. Powers further says: "For over thirty years not a salmon passed up the Pemigewassett. This is the first time -in this country, at least -that any considerable quantity of eggs have been taken from mature salmon caught from a depleted river artificially restocked. The result not fail to be highly gratifying to those who have, or have had, the matter in charge, and has, to a certainty, demonstrated the faith of the few who argued that the rivers could he restocked to advantage was well founded. Those who have believed it impossible must now be convinced that it is not only possible but quite practicable.

Two thousand eggs of the California "mountain trout" (Salmo iridea) were received from Prof. Baird and were hatched. What the Commissioners say about fishing for count is so plain and to the point that we gladly give it en-'They say: "We must repeat what we have said before that the depopulation of our brooks is largely owing to the persistent capture of the yearling fish, from two to three inches long, before they are old enough to reproduce their species, by the cockney fishermen and careless boys, who aim at getting the largest number possible, and either say, 'Every one counts,' or, 'the small fish are the sweetest. they are to any one who is fond of salt pork, for these little yearling trout taste of very little else when cooked, the small proportion of fish flavor being entirely overwhelmed by the larger ratio of the 'essence of hog.' It may be the affinity between the biped and the quadruped which accounts for this

It is interesting to note that attention is being paid to the migration of lampreys, which are largely eaten in New Hampshire and some neighboring. States, but which are rejected as food in New York. The report says that this fish "came up the Merrimack as far as Lowell, and Messrs. George Liddle and J. L. Stevens, of Manchester, made two trips to Lawrence and procured several hundred, which they placed above the Amoskeag dam. They propose to repeat this work next month, so that we may reasonably expect to see these fish back in numbers in a year or two, though nerbans not in such quantities as when they obtained the title of 'Derryfield beef." An appendix contains an address delivered before the Fish and Game League, April 6, 1880, by ex-Gov. B. F. Prescott, in which he advocates fishways and protection. list of the lakes and ponds in the State closes the report.

BILLE-FISHING ABOUT LONG ISLAND -Of all times in the year the bluefishing is usually at its best in October and November, and the present season is as good as in any previous year. Last week the catches were plentiful all are Long Island, and we have no doubt of their being as good in other waters, but we personally know that they were excellent off Fire Island, Gardiner's Island and Long Island Sound, some "fifteen pounders" having been captured in Plum Gut. Not only is this fish, which east of New Jersey is a "blue fish" and south of there a "tailor," exceedingly plentiful now, as it has been all summer, but this is the season for the large ones to come in and they are in the very best condition attained by this excellent and gamy fish. New Yorkers can now take Long Island Railroad at either Flatbush avenue, Brooklyn, via the down-town ferries, or by Thirty-fourth street ferry to Greenpoint, and in a few hours are landed in any part of the Island they may wish to visit, as the road branches in all directions. Smaller fish are found in Great South Bay, but the large ones seldom enter it and are caught just outside the inlet; and as the bay is shallow and full of "weed" those fishing inside must take their fish by chumming, which, by the way, is the most sportsmanlike: but if you prefer the sail with a trolling sould then outside is the proper place. The bluefish is so savage and voracious that the smaller ones never care for the company of their larger relatives, hence a school will usually contain fish of nearly one size, and when taking "three-pounders" it is seldom that one of twice that size is struck. It is a notable fact that while the other food fishes are decreasing in numbers the bluefish. Pomatomus saltateir, is really increas. ing, and fifty years ago it was unknown on our shore:

Pennsylvania Field Trials.—The arrangements for these trials are now completed, they will be run at the terminus of the Quarryville R. R., which is about fifteen miles south-east of Lancaster, in Lancaster County. The grounds have been preserved for several years and quail are very abundant, besides birds will be on hand for stocking should there not be a sufficient number found on the grounds. The entries to the trials made to the sceretary are reported to be nearly full.

# The Sportsman Couris

"NO FOR THE MAGANETTIWAN!"

WE hereabouts are persistent fishermen—not a bass in Fall Creek or White River that is not acquainted with us by sight; but I doubt that Indianapolis will ever become a fishing resort. A year ago I announced that I would never again wet a line in Indiana, of course I have broken the resolution. When my neighbor dous his cordurovs and asks me if I "have any sand," I am likely to say that I have, and in an hour or so I am basking in the sun in the neighborhood of Broad Ripple, hoping for a bass, expecting a goggle-eve and hauling in a small sunfish. Along in the spring my eye was riveted by a well-written advertisement in Forest and Stieran and the stream of the strea

that the hotel is excellent, and 'l know of no place where the summer sunterer gets more for his money. Others have said that the fishing is superb, and I believe that is the word. The fish are not yellow nor striped nor silver, but black bass, and die game. We failed in dy-fishing and fell into the custom of the country and used the old-fashioned, reliable angleworm. It is a trifle nasty, but it does the business. The Toronto worm is the thing. The home crop of worms is scant. Sand and rock is not the proper environment for a worm—he runs too much to skin, although in one corner of Mr. Pratt's garden there is a preserve where the worms are tolerably fat; but digging them by daylight is attended with considerable risk unless in the absence of the proprietor. The fishing (of the kind) leaves nothing to be desired. The boats are excellent, the boatmen expert. There is no use in stating the number There is no use in stating the boatmen expert. There is no use in stating the number of fish that Webster, our boatman, brought in night after night as I desire when I write anything to be believed. There is a variety of lakes to visit, enough to consume the days, and at evening one can sit and hear Angus Morrison, M. P., tell muscalonge stories, see the landlord welcome his guests, and at night sleep untroubled by mosquito or ——.

The weather was perfect—the monotony was broken by The weather was perfect—the monotony was broken by fine thunder-storms—but the aforesaid advertisement, "150 for Maganettiwen property of the formal property of the fine propert

knowledge of the country.

Muskoka is free land given to the settlers by the govern-

Muskoka is free land given to the settlers by the government, untaxable for tventy-one years, and not liable for debt. I am sorry that the land is, so much of it, undissolved rock. The people are poor and kind, hospitable in the extreme, and a little money will go a great ways. Any sportsman not a "tender-foot," cannot fail to remember plectsaulty his sojourn in this region. Depending on chance acquaintance for company, 1-have had remarkable good fortune. Returning to Pratts, at Rosseau, the bass were still biting, but I left J. M. fishing in twenty feet of water for his elegant rod and reel, inadvertently dropped overboard. There was no sport in that. So, Mr. Editor, I am glad on the whole that my eye rested on the "Ho for the Magametikwa!" and can only suggest that the advertisement be made large enough to state that July and August are not the months for trout.

NOTES ON SOME MARINE, INVERTE-BRATES.

TN a recent number of the American Journal of Science, Prof. A. E. Verrill gives us some very interesting notes of his observations on several marine forms, made during the past summer at Newbort, R. I.

Prof. Verrill spent a portion of the summer at Newport in connection with his work on the U.S. Fish Connaission, and the discoveries referred to will, no doubt, be published more in detail in the Fish Commission Report of last summer's work. Perhaps the most interesting of these observations is that of the occurrence at Newport of two littoral species of European shells which have not before been recorded as These are Truncatella truncatula and Assimina American. grayana. During the latter part of July and in August numerous specimens of both species were found living among the decaying seaweed at highwater mark on the docks at Newport. Both young and full grown shells were found The two species were associated with a number of well known North American genera, such as Alexia, Anneida, Cheracs, Ligia, Orchestia and other littoral species. 11 cannot at present be decided whether these shells have been introduced at Newport by shipping, or whether they are really indigenous and have hitherto been overlooked. At all events, the opinion is expressed that they are now well established inhabitants of our shores.

The diffusion of the little shell Littoring littory has been noticed before in these columns, and to what has been said by our correspondents Prof. Verrill adds some interesting facts. It is known that this common European species appeared first on the coast of Maine in 1868, though Dr. Dawson has stated that he had collected it at a much carlier date on the shores of Nova Scotia. In 1873 the United States Fish Commission found it abundant at Saco, Maine, and it was collected sparingly at Peakes Island in Casco Bay. In Provincetown, Mass., but in 1875 had 1872 it was rare at become common. Prof. Verrill found it abundant at Burnstable, on the shores of Cape Cod Bay. At Wood's Hole, on the southern shores of Cape Cod, only two specimens were found in 1875, but in 1876 it was common there, and is now very abundant. During last winter Prof. S. I. Smith found the first specimen detected as far West as New Haven, and since then other specimens have been taken there by Mr. E. A. Andrews and by Mr. J. H. Emerton. It is now very abund. ant at Newport.

Ciona occiliata is another invertebrate which Prof. Verrill found abundant at Newport. This large and beautiful ascidian is to be found on rocks and on the piles of wharves at low water, and on dead shells to a depth of twenty fathoms. It would seem to be very local in its distribution, for Prof. Verrill has never found it at any other locality on our coast. This species grows to a length of four or five inches, and is about an inch in diameter. It is quite translucent, and the internal organs may be seen through the pale greenish or yel-The apertures are surrounded by a circle lowish white test. of bright lemon yellow, and the ocelli are bright red. This species is said by Binney to have been first found by Agassiz at New Bedford, Mass., and by him named Ascidia oscellata. It is figured in Gould's Invert. of Mass., but not described.

TEMPERATURE AND RAINFALL LAWS FOR LONDON .-- An interesting paper, read at the last meeting of the British Association for the Advancement of Science, attempts to answer the question: Is there to be found any definite relation be-tween extremes of rainfall or temperature in any month or season and the weather or temperature of the month or season next following? The author, H. Courtenay Fox, M. R. C. S., bases his conclusions on data obtained from an examination of the observations on monthly temperature and rainfall, as recorded at the Royal Observatory during the sixty-six years from 1815 to 1880. As a result of his investigation he lays down the following definite propositions:

1. A cold spring is very prone to be followed by a cold summer, a cold summer tends to be followed by a cold autumn, and a cold autumn has a slight tendency to be succeeded by a winter of low temperature.

2. Warm summers are generally followed by warm autumns.

3. In no fewer than eight out of the twelve months (that is in every one except February, March, May and October) very low temperature tends to be prolonged into the succeed-

4. If June, July, August or December be warm, the next month will probably be a warm one also.

5. Two months (June and July) tend, when very dry, to he followed by dry ones. On the other hand, a dry August adicates the probability of a wet September.

6. A wet December is apt to be succeeded by a wet Janu-

Besides the foregoing, there are a few instances in which the rainfall of certain months appears to bear a definite rela-

tion to antecedent or subsequent extremes of temperature. 7. If August or September be warm, the ensuing Septem her or October inclines to be wet. If, on the other hand, September or November be cold, the succeeding October or December is likely to be a dry month.

8. If February, June or July be very dry, the next month has a strong tendency to be warm.

9. If January, March or April be wet, we may also expect the next month to be a warm one. But a wet May or July gives a strong probability of cold weather in June or August respectively.

SHARKS SWALLOW THEIR YOUNG .- A short time ago Mr. Blackford of Fulton Market, New York, received a specimen of the "porbeagle," or mackerel shark, *Isutropsis dekayi* which was caught near Great Neck, Long Island, and proved to be a female which measured six feet cleven inches in length. Mr. Blackford said :

"When I received her she had been dead more than sever "When I received her she had been dead more than seven hours. From the immense size of her stomach I thought she must have swallowed a barrel or two of moss bunkers, and to gratify my curiosity I opened her. Imagine my surprise, when instead of moss bunkers I found ten little sharks, evi-dently her offspring, and all just the same size—exactly two feet long. I should say they were about six months old, for a young shark when hatched from the egg measures about four inches. There was no mark upon them as if digestion had begun."

The question was raised whether they were taken in for food or for protection. If, however, they were taken as food one redeeming quality can be placed to the account of

FLINT'S FIELD NOTES,—Warrenton, Va., Oct. 11—Editor Forest and Stream: I give you the following memoranda

Forest and Stream: I give you the following memoranda from my note-book:
1880—April 23. Hunted over our "snipe ground:" no signs; birds all gone.
April 27—Saw Baltimore oriole for first time; saw Aspen offole on 24th inst.
April 28—Reliable informant saw yesterday twelve English mocking-birds in a flock; says they raise there in great num-bers every year, building in large thorn bushes; think they had just returned from South. Saw to-day the first cathird of the season. of the season.

of the season.

Of the season.

Of the season.

Ott. 9—Caught with hook and line, in Rappahannock River, twenty-old "earp" and chub; carp about one-half pound weight and full-roed. Do fish under favorable circumstances—open winter, etc.—spawn twice in twelve months? An "old fisherman" tells me the advanced condition of these spawners indicate an open winter; says "jacfishi" shed their teeth every moon; they bite best on the dark of the moon; has occasionally caught them on the light of the moon, when their gams were red and showed recent shedding of the teeth. In cleaning the "earp" discovered two small parasites clinging to the tongue; thought they were diminutive leeches, until reading Foirst and Stream of 7th inst. What were they?

In July, while fishing in the Shenandoah for bass, took in

leeches, until reading Foiest and Stream of 7th inst. What were they?

In July, while fishing in the Shenardoah for bass, took in a sucker hoating belly up. When unred over back presented appearance of decomposition and escape of gas. Closer inspection showed a multitude of slippery, gelatinous-looking parasites, wrigging about like diminutive crabs; fish was plump and recently dend. What were these wrigglers?

The article in Forest and Stream on "Frogs Capturing German Carp" recalled the fact that when a boy I caught a large water or bull-frog which was in the act of swallowing a smaller "brother." The legs sticking out of the corners of his mouth gave me the idea of his being a "horned frog," of which I had read, but never seen.

In July, 1884, in Diuwiddle County, Virginia, I witnessed the attempt of a black snake to swallow a garter snake of equal size, which he had captured and killed by constriction. I could hear the bones crack in the deally embrace. My companion split fobacce joince in the black snake, smouth and caused him to eject his anticipated bon bonche, and then killed the black snake.

It is doubtful if any individual fish spawns more than once

It is doubtful if any individual fish spawns more than once a year, although some species which spawn in summer are so irregular as to appear to do so. The cyprinoids (carp-like fishes) spawn from May- to September, and even cover a longer period in some localities. It is possible that your fish,

for some reason, did not spawn early, and that, developing so late, it might be checked by cold weather. Carp do not grow in cool weather, and so spawn partly developed might be checked. Your "carp" are probably uncolored gold fish and not the true carp which have lately been brought from Germany and bred in Washington for distribution. It is impossible to say what the parasites were from the description, and if we had them we could perhaps only give you a long technical name of more or less jaw-twisting capacity. The best plan is to study the habits and structure of such parasites, and then you will know all that is known of them. which is very little, except the systematic cognomen,

Experimenting with Snake Poison.—The following dispatch to the Herald contains information which, if authentic, is of very high importance, and further information on the subject will be anxiously looked for

is on very night importance, and turther information on the subject will be anxiously looked for:

\*\*Rio Janeiro\*\*, Sept. 14, 1880.\*\*

There was some excitement and much talk about the scientific enthusiasm of Dr. Stradling, surgeon on beard the Royal Mail Company's steamer Elbe, who had horrified the crew and passengers of that vessel by testing upon himself the efficacy of an autidote for snake bite which he had discovered. At Bahia he succeeded in purchasing a large rattleanake, which he conveyed on board surrepitiously, and, locking himself up in his cabin, deliberately made the snake bite him, with the result that he was found, some twelve hours later, in a state of coma, from which, however, he was recovered without much difficulty, and declares that for many hours the venou had been without effect upon him. Being remonstrated with by the Captain, Dr. Stradling promised "not to do it again." But it was too much for him, and at Rio Janeiro he went ashare one evening, leaving a letter to the effect that he "was going ashore to try his autidote, so as not to break his promise (in the letter, at all events); that he felt confident of success, but that they would know what had become of him in ease he failed to return," etc. Of course this letter caused his friends much anxiety till next morning, when, just as they were sending off to the police, Dr. Stradling himself appeared, "radiant," showing a fresh bite on his arm, and declaring the experiment to be entirely successful, although he would not tell in what consisted the specifies on marvelously effective. Dr. Stradling has been employed as surgeon of Royal mali steamers for some time, and has given particular attention to the study of the various reptiles found in Brazil, but had never pre-Stradling has been employed as surgeon of Royal mail steamers for some time, and has given particular attention to the study of the various repriles found in Brazil, but had never previously carried his devotion to science so far. He is much respected by his shipmates and by passengers on his steamer as a clever and scientific physician, and his loss would have been much regretted. The knowledge gained by him may be very valuable to others, and Dr. Stradling declares his intention of publishing his discovery as soon as he reaches England.

A Tame Deer.—Some quite interesting facts in relation to the domestication of deer have just come under my notice.

The prominent angler of Marinette, Wis., Mr. A. C. Merryman, some two years since secured from an Indian a young doe fawn, which he sent to Mr. J. A. Asher, the Superintendent of the Hamilton & Merryman Co. farm that is located forty-five miles from Marinette, in the forest of the Michigan Peninsula.

The fawn became a great favority, and was allowed full

Peninsula.

The fawn became a great favorite, and was allowed full liberty, notwithstanding the clearing was frequented by wild deer, hunters and Indians. A strap carrying a small bell was attached to her neek, and this fully protected her during the

st season.

She roamed about at will, sometimes absent for days to-

She roamed about at will, sometimes absent for days together, but returning to her civilized, protectors, manifesting great delight for all attention. She is now two years of age, and is the mother of two benutiful fawns.

The bell that has saved her life among the Indians and hunters had no terror for her wild companions, as these fawns were sired by an untanned father. On one occasion an Indian came to the farm bringing a saddle of venison with him to sell, and trotting behind him came the doe from the woods. The Indian had killed the deer while it was in company with the doe, and she had stood by while he was dressing it, and then followed him to the clearing.

followed him to the clearing.

A STRANGE FOSTER MOTHER. -Belleville, Orlober 11.—
Editor Foxed and Stream: Under the heading of "Tame Quail" in your last issue. I notice an article by "Lutron," in which he lells of three quail being found with a flock of tame turkeys. I can tell of a similar incident, perhaps still more remarkable. My brother-in-law, living near Centralia, Ill., had a turkey hen which made her nest in a ravine not far from the house. A very heavy rain having fallen, so thouded the ravine as to wash out the old turkey hen's nest. She wandered about for a day or two disconsolately, and then disappeared altogether, coming back occasionally to feed. The family supposed she had made another nest, and was again laying. What was their astonishment to see her come to the house in her wanderings, and deliberately sat on the eggs and hatched them. The young quait seemed perfectly satisfied, and were getting along very nicely, but were carried off by hawks, one by one, until all were gone.

hawks, one by one, until all were gone.

A Good Word for the Sparkows.—I send you by this mail a lot of leaves of the maple growing in front of my office, which when gathered were literally rovered with lice. What attracted my attention to them was the busy action of some two dozen English sparrows, hopping here and there in the tree, pering under the leaves, and savagely feeding on something. An inspection revealed the cause of their cargeness, and the cause of the early shedding of the leaves. Examine these vermin and tell us what they are. The sparrows were so busy they would scarcely keep out of the reach of my hand. I called the attention of several gentlemen, who watched them for some time. This proves (to me) the insectivorous habits of the English sparrow. In the office yard, every season, a pair of robins (Turdus migratorius), the little brown wreu and at least two dozen pairs of English sparrows build, and raise their broods without any fighting. The only occasions when a "rumpus" is made is between the cocks when the nesting season arrives. I have counted as many as ten occks around a single hen, fussing, fighting and "carrying on" at a rate enough to deafen any one.

Filty.

The insects sent are apparently the ordinary Aphildes, or

The insects sent are apparently the ordinary Aphides, or plant lice," so injurious to green-house plants

Flew Against the Light.—Stopping at our mutual friend, John Krider's, this morning, I was shown a large quantity of warblers and other birds that had been sent him by the light-

house keeper at Atlantie City, N. J. They were found at the base of the tower, having flown against the light in a nightly migration during a late storm. They comprized the following varieties: Blue-winged yellowhacks, indigo birds or blue limets, black-throated blues, red-eyed vireos, red starts, black poll warblers, Connecticut warblers, black and white creepers, olive-black thrushes, Maryland yellow-throats, yellow-rumps and magnoli warblers. This was doubtless the great Southern migration which takes place every antunn. During the fall, about four years since, the wife of the keeper of the same lighthouse caught alive several brant which, during the prevalence of a top, had entangled themselves in the grating protecting the light. These birds are now alive, one of them, I think, having been presented to the Zoological Garden at Philadelphia. Garden at Philadelphia

Romings The Fist Hawk.—Baltimore, Oct. 4, 1880.—While on a fishing trip down the Gunpowder River a few days ago we witnessed an interesting sight. A fish-hawk that was hovering over the water suddenly made a plunge, and arose with a large taylor in his talons. He sailed leisurely over the land toward a dead tree near the shore, doubtless thinking he would have a nice meal. Just as he neared the tree to alight a large eagle came soaring down upon him, and with one swoop made him drop the fish. The eagle darted after the fish and caught it before it reached the ground, and flew away to enjoy his stolen sweets.

### FISHING IN TENNESEE.

FISHING IN TENNESEE.

WHILE the heat in our city was almost intolerable, it took but little persuasion to induce me to accept an invitation to this the loveliest stream in middle Tennesee, watering asit does one of the most fertile and beautiful sections of the State. This charming water-course is supposed to have its source in an under-ground lake in Williamson county. This, added to the fact that at every few hundred yards it is fed by cold springs, many of which burst forth from the solid rocks along its banks, accounts for the coldness of the water and the consequent superiority of the fish found in it. The bass and black perch, even the catfish taken here, have a justly merited renown for their gaminess and excellence as food. When not troubled by freshets, the waters are as clear as crystal, passing over strata of solid rock and gravel, in places forming beautiful cascades, which in turn run into deep pools and eddies in which the finny beauties delight to exist. Big Harpeth is the residuary of the South, las well as several other minor streams which have the same source. In following the winding course of the South Harpeth the readway is about half in the river and half over gravel beds, the narrow valley being occupied by fields, the rich and luxminar crops of which made my eyes glad with the prospect of plenty. Where our road lay in the stream, or at places where it crossed, I was struck with the immense quantities of small fish. As Col. Sellers says, "There are millions in it." In the deep holes and under the ledges of rocks and overhanging stres I could see the great fat bas, lolling about as lazily as the lazzeroni on Chinja at Naples. Oh! how I longed for supper. At a crossing where the water was not more than two or three inches deep, but within a hundred yards of what is known as the Flat Rock, I saw, angling away as ernestly as possible, my young friend "Tom Allison." I halied him, but he was too much occupied to answer at the first call. I was just blowing up to make another when I saw him give order in which they were arranged, that an adept was their

We ate a most hearty meal: fried chicken, clabber, luscious peaches and cream—the latter so rich and thick that no one questioned the dear little "Jersey" which gavoit. I could have

tow.

resigned all desire for any other scenes, and dwelt there complacently with the charming surroundings, if such had been my luck; but unfortunately the abominable "business" compelled me to turn my back on what would have been my greatest pleasure. I could neither follow the hounds than hight, as there was no moon to light our path, nor take a turn at the fine bass in the morning, because 9 a. m. was the hour I was to be at the desk. I was glad to hear from the "Squire" that the forked month sucker was really in the South Harpeth, and in great quantities; also all varieties of fish were rapidly increasing since the protective laws had been enforced. The game laws had effected the same results. Pheasants (grouse), which had become almost extinct, are coming back in great numbers. As for qual, the prospects for next winter are most brilliant. Sitting on the proth, smoking and talking with my good friends, I was constantly interrupted by the melodious song of "Bob White." The "Squire" has a number of pigeous which prefer roosting in the fine beech trees in his yard to the houses built for them. This I found curious, as I had never seen the like before.

In the fall I intend returning to the "Squire's" and have a fair trial at the many kinds of game and fish in the country. A more lively spot for sportsman than near his place I never saw. Trees which keep their foliage all the year to camp under, superb springs of icy cold water at your feet, fire-wood abundant—and all in the hearing of farmers who have plenty, live in style, and would gladly furnish milk, butter, chickens and vegetables for the mere asking. Reluctantly at 4 A. M. I bade farewell to my friends.

### THE DOMINION RIVER FISHERIES.

Concerning the leasing of salmon rivers the Mirimichi Advance says: "The Riparian Rights Case, has been decided by Justice Gwynne in the Exchequer Court, at Ottawa, against the Government. He affirms that the Department of Marine and Fisheries has not the right to lease the fluvial rivers of this Province to any person to fish exclusively in, although it may regulate fisheries in such rivers. His Lordship decides that the owners of the soil have the right of fishing in inland rivers above the ebb and flow of the tide, but the public have the right of fishing in the sea and on the bays and arms of the sea. The Crown Grants of land adjacent to rivers above the ebb and flow of the tide carry the right of fishing in the river, unless specially excepted and, even then it would not be given to the public.

"This decision is in accordance with equity and against the assumptions set up by the first Canadian Minister of Fisheries and persisted in by his successors. An appeal will, it is said, be carried to the Supreme Court of Canada."

AMERICAN SARDINES.—There are several fishes put up as sardines in Maine and New Jersey, but in most cases a foreign label is put on the caus when in fact they are good enough to be sold on their own merits. The "sprat" Olupea sprattiss is largely used in Europe as a "sardine," as is also the herring, or rather the latter portion of it cut off at the dorsal fin. In this country the menhaden or moss bunker is the principal fish so put up, and they are excellent if properly prepared, the main thing being to get a fish with moderately soft bones which are further softened by steaming and then putting them up in good oil. In Maine the business is brisk at present; there are at present eight sardine factories in Eastport, running full blast, night and day, turning out weekly about 3,500 cases ready for market, and giving employment to about 600 hands, male and female. The pay-roll of these factories foot up to some \$6,000 per week. During the past two months there has been an abundant supply of fish, and the prospects are excellent for a good fall's work. In a few weeks there will be three more factories added to the number, which will give employment to about 150 more hands.

Bie Bass from Greenwood Lake.—New York, Oct. 11—At Greenwood lake, N. J., Friday morning, under pilotage of Sam Darrison, Chas. Myers and Chas. Dennis, Jr., took nine Oswego or big mouth bass weighing twenty-seven and a laif (27½) pounds: weights of three largest 6½, 6 and 3½; measurement of first, length 21 in., girth 16 in., mouth open lip to lip 4½ in. On Saturday morning same party caught 11 bass weighing 25 pounds; weights of three largest, 4½, 4½, the second fish having though his lip a hook lost the previous day by Garrison. Yours, Old Subscriber.

Bass Fishing on Sr. Clair Flats.—Detroit, Oct. 11—I had the pleasure last week of a trip to St. Clair Flats with Mr. E. J. Fairfield, of Ohio, and Mr. C. C. Pickering, of the same State, both of whom are enthusiastic fishermen. We had time for only two days' sport, and had the lil luck to have even that short time 'bit-off' at 10 o'clock a. M. of the second day by the loss of our minnow bucket, by the breakage of its fasterning to the boat. We, however, got some 24 or 25 bass, such as does one good to look at, not to speak of the delight of catching. Our string must have weighed 90 pounds. Some splendid strings of bass are now being taken there. The water is cold and clear, and every bass caught fights sufficient to satisfy the fellow at the other end of the line. Host Slocum tells us the Star Island House will be enlarged for next season by the addition of some forty or fifty rooms, and in many ways improved so as to add to the comfort and pleasure of his guests. In fact they are even now at work with a large derelging machine on one side of the hotel. With these additional hotel facilities and the marked improvement in the fishing at the flats another season must make those waters still more famous.

UNO.

FISHING IN THE GUNPOWDER.—We were on our way to what is called the "stone pile" to fish for white perch, and were under the guidance of Mr. Wm. Eccleston (familiarly called "Old Man Eccleston)," the vetern ducker, fisherman and decoy maker of the Gunpowder and Carrol's Island region. He soon put us on the stone pile, and as soon as we got our rods together and our lines rigged, our sport commenced. It was half-past ten when we began fishing, and stopped at four. During that time we caught fish constantly. Large white perch, rock taylors and spots. The writer was unfortunate enough to loose the screw that held the handle of his recl on, and just after doing so struck a large rock fish. Of course he could do nothing but hold on to him, and the strain was so great that the hook tore out of his mouth; the spring of the pole was so strong that the line flew up into the air, and on the upper hook there was a small taylor. The jerk was so violent that it tore the hook out of his mouth also. We were becalmed going home and had to row six

miles, which made us so late that we had not time to count or weigh our fish, which would have more than filled a bushel basket. E. A. R. October 4, 1880.

blasket.

October 4, 1880.

BLADDERS OF FISHES.—In a recent note to the Pari Academy, Prof. Marangoni gives the results he has arrived a in a study of the swimming bladder. He states first, that is in a study of the swimming bladder. He states first, that is the organ which regulates the migration of fishes, thos fishes that are without it not migrating from bottoms of littl depth, where they find tepid water; while fishes which have a bladder are such as live in deep, cold water, and migrate the deposit their ova in warmer water near the surface. Next fishes do not rise like the Cartesian diver (in the well-know experiment), and they have to counteract the influence of their swimming bladder with their fins. If some small dear and living fishes be put in a vessel three-quarters full of water and the air be compressed or rarefied, one finds in the former case the dand fish descend, while the living ones rise head in advance, to the surface. Rarefying has the oppositience. Fishes have reason to fear the passive influences due to bydrostatic pressure; when fished from a great depth their bladder is often found to be ruptured. Thirdly, the swim ming bladder produces in fishes a two-fold instability—one olevel, the other of position. A fish, having once adapted it bladder to live at a certain depth, may, through the slightes variation of pressure, be either forced downward or upward and thus they are in unstable equilibrium as to level. As the position, the bladder being in the ventral region, the centre of gravity is above the centre of pressure, so that fishes are all ways threatened with inversion; and, indeed, they take the inverted position when dead or dying. This double instability forces fishes to a continual gymnastic movement, and doubless helps to render them strong and agile. The mos agile of terrestrial animals are also those which have leas stability.

Fig. Culture in Tennessee.—A correspondent writes u that the protective laws of this State are working wel wherever they have been enforced, and the fish have in creased. Fish Commissioner George F. Akers has planter 500 German earp, received from Prof. Baird, U. S. Fish Commissioner, in ponds near Nashville, and they are now o 23bs. weight. The State has no appropriation for this purpose, and therefore but little can be done in the way of replenishing depleted waters. It is much to be hoped that the next Legislaure will have wisdom enough to remedy this and not by a spirit of false economy allow the people to be deprived of this great food resource. Rivers, streams and ponds should no more be allowed to lie unproductive that the land, and Tennessee should not allow this source o wealth—for certainly it is wealth—to remain in a state o neglect.

Black Bass in New Jersey;—A good chance to get smal black bass for stocking waters in New Jersey is thus show by the Newark Sunday Cull: Small black bass are now being caught in large numbers in the seventeen-mile level of the canal, and it is evident that the water bas in some manne become plentifully stocked with them since spring. It is pity that this is the case, for the annual drawing off of the level will result in their destruction before they have attainer respectable size. By watching for the time when the canal i empited a fine supply can be obtained for stocking privat ponds.

# LIST OF FISH COMMISSIONERS.

THE following is a list of the Commissioners of Fish an Fisheries of the United States and Canada, as far as has been possible to obtain them. It has been corrected t October 1 by correspondence, and there are some changes from that of last year. Arkansas had a commission of three a fe years ago, but never had an appropriation and did no work One member died, one resigned, and last year, after the liwas made up, a letter came from Mr. N. B. Pearce, of Osag Mills, saying that he supposed that he was still a Commissione although there was nothing to do, or if there was anything t be done a lack of the needful prevented it. This year he ha failed to respond, but Texas comes into line instead. The corected list now stands:

CANADA,	
F. Whitcher,	Ottawa, Ontario
Wilmot, Supt. of Fisheries,	Newcastle, "
NEW BRUNSWICK.	
. H. Venning, Inspector of Fisheries,	St. John
NOVA SCOTIA.	
. H. Rogers, Inspector of Fisheries,	Amherst
PRINCE EDWARD ISLAND,	
H. Duvar, Inspector of Fisheries,	Alberton
DRITISH COLUMBIA.	
ex. C. Anderson, Inspector of Fisheries,	Victoria
UNITED STATES.	
of, Spencer F. Baird,	Washington, D. C.
ALABAMA.	
This State had a Commission last year, but w	e have been unable
get a reply to letters addressed to them.

### THE ANISE-BAG HUNT.

Melrose, Jackson Co.

Beetown, Grant Co.

Mark Douglas, John F. Antisdel,

Atlanta.

Christopher Hutchinson,

All glory to man and all glory to woman, Who rode in this hunt; they have cause to be vain; They've shown quite enough of the nature called human, But little enough of the nature humane.

Most glory to him, may his mem'ry be scented,-Perchance 'twas a drug clerk, some pestle-pot runt,— Who cudgelled his brain till at last he invented This glorious sport of the anise-bag hunt

THE NEW YORK GAME LAW.

ANALYSIS OF ITS PROVISIONS.

Brooklyn, October 8, 1880.

Woodcock, Philahela minor.
Black-bellied ployer, ox-eye,
Squatarola helvetica.
Long-biled curlew, Numenius longi-

Turnstone, or called back, Strepsted snipe, dowitcher, hamphus griseus, ted sandpiper, or ox-bird,

To the Long Island Sportsmen's

To the Long Island Sportsneak Association:

GENTLEMEN—The time is approaching when, as the wardens of the interests of the "New York State Association for the Protection of Fish and Game," we shall be required to account for our stewardship. Under our auspices much can and should be accomplished. Carpers have criticized the former action of that Association and dlubbed it a "club of pigeon shooters." It has been asserted, with apparent justification, that its prime objects have been lost sight of in the mercenary contests for prizes at the traps.

The management of each convention is within the control of the cuteristing organization. What can and oneby we to

The management of each convention is within the control of the cultratailing organization. What can and ought we to do to remove the offium and establish the credit of our State Association? The occasion is afforded us to demonstrate our sincerity and unite our local societies in a work of common benefit to the large body of sportsmen throughout the state. No subject is of more immediate importance than the existing legislation for the preservation of minuals, birds and tish of the kinds commonly termed "game." During the interval since our last meeting I have collated the recent statutes upon that subject and, so far as practicable, have analyzed their existing provisions to afford you an intelligible basis for examination and recommendation of amendments.

template decision was a second ments. The special laws for shell-fish, regulating the taking of clams and oysters and the sale of lobsters, seem hardly within our purview; nor have I included the laws establishing fishways, the construction of dams over rivers, those relating to the companies of Fisheries or the incorporation of companies. war purview; nor have 1 included the laws establishing fishways, the construction of dams over rivers, those relating to Commissioners of Fisheries or the incorporation of companies for the protection or propagation of fish and game, those providing for election of bay constables, those conferring powers on Supervisors to legislate, nor the laws regulating shad fishing, except as these subjects are specifically referred to in the laws of 1879 and 1880.

The general laws are Chapter 534 of the Laws of 1879 and Chapters 534, 584 and 591 of the Laws of 1880 may be considered to the law of 1880. They are prohibitory in their nature, and propose to preserve game by punishing those who kill, sell or have it in possession during certain specified periods. They do not provide for propagation in any other manner. While general, the exceptions to their operation in localities are many.

Without strictly following the order or technical verbiage of the acts, the provisions can be better stated by dividing the subjects into:

1st, Animals,
2d. Birds.

7th. Special game officers.

of the acts, the provisions can be better stated by dividing the subjects into:

1st, Animals.

5th. Civil remedy.

2d. Birds.

6th. Criminal proceedings

7th. Special game officers.

4th. Miscellaneous provisions, 8th. Local legislators.

In nearly all the prohibitions as to birds and fish the language used is as follows: "No person shall kill or expose for sale or lave in his or her possession after the same has been killed."

With the exception of the amendments introduced by the Laws of 1880, the violation of the prohibited acts is in terms made a mislemeanor, and a pecuniary penalty is added. In the case of shooting certain birds specified in Chapter 584, Laws 1880, the provision making it a mislemeanor is omitted. These are the "eagle, woodpecker, nighthawk, yellowbird, wren, martin, oriole or any song bird" and the "robin, meadow lark or starding." (Chap. 584, L. 1879.)

Animals, shithely aND FISH PROTECTED.

The animals which by these laws are considered game are "wild deer, moose, hare or rabbit, squirrels, black or gray."

The water or bay birds so declared game are "wild deer, moose, hare or rabbit, squirrels, black or gray."

The water or bay birds so declared game are "wild deer, moose, hare or rabbit, squirrels, black or gray."

The water or bay birds so declared game are "wild deer, moose, hare or gray "The water or bay birds so declared game are "wild deer, moose, hare or gray "The water or bay birds so declared game are "wild deer, moose, hare or gray "The water or bay birds so declared game are "wild deer, moose, hare or gray "The water or bay birds so declared game are "Wild deer, moose, hare or gray "The water or bay birds so declared game are "Wild deer, moose, hare or gray "The water or bay birds so declared game are "Wild deer, moose, hare or gray "The water or bay birds so declared game are "Wild deer, moose, hare or gray "The water or bay birds so declared game are "Wild deer, moose, hare or gray "The water or bay birds so declared game are "Wild deer, moose, hare or gray "The water or

The water or bay birds so declared game are "wild duck, gnose or brant."

The upland birds specified are "qual, woodcock, ruffed grouse, commonly called partridge, pinnated grouse, commonly called prairie chicken, spruce grouse, commonly called Canada partridge."

Also protected are "eagle, woodpecker, night hawk, yellowbird, wren, martin, oriole, song birds, robin, meadow lark and starling."

The specified fish are "speckled trout, salmon trout, lake trout, California trout, black bass, striped bass, Oswego bass, musculonge and salmon." But there is no close season for salmon.

In New York city: District Courts and Marine Court; all Courts of Record in the State. In Kings County: County Court and City Court of Brooklyn in actions by game constables.

Costs and Disbursements.—Recovery under \$50 in Court of Brooklyn. Cost to equal recovery in amount.

In action by The People, commenced by District Attorney at request of the game protectors, if the plaintiff succeeds, to he at rates fixed by \$ 307. Code of Procedure (old Code), besides wirnesses and other fees and disbursements, without regard to awont of recovery. District attorney may discontinue action without costs.

without costs.

Without costs.

Expenses in such actions to be advanced by County Treasurer on requisition of District Attorney. On recovery, expenses to be paid back with all fines to County Treasurer, but

costs to go to District Attorney. County Treasurer to pay

surplus over expenses into State Treasury by Sept. 1. part of the general fund.
Judgments Enforced.—By execution against the person. Imprisenment to be not less than five days, or if the judgment and interest be more than \$5, then at the rate of one day for \$1. Several penalties may be in one suit, but only one imprisonment on the judgment. Imprisonment does not

### OPTMINAT. PROCEEDINGS

Convicted Persons.—Punished by fine not less than \$5 nor more than at the rate of \$1 for every dollar of penalty, when same exceeds \$5.

same exceeds 89.
Or by imprisonment in county jail or penitentiary for not less than five days nor more than one day for every dollar.
Or by both fine and imprisonment.
Courts having Juvisilietion.—In towns and villages—Control Special Sessions. In cities—the courts having jurisdiction

of Special Sessions. In cities—the courts having jurisdiction to try misdemennors.

Finos to be paid within ten days by Court receiving them to the Treasurer of the county where offense committed; except in New York city, to the Chamberlain, to be kept as a fund to enforce the game laws as the County Supervisors or the New York City Aldermen may direct, for special detectives or rewards for detection and arrests.

Arrests without warrant required of sheriff, under sheriff, deputy sheriff, police offier, constable, game constable and bay constable when finding person violating game law, and to bring him before the nearest magistrate having jurisdiction.

Neplect to enforce have by officer or magistrate made a misdemeanor when proper information or complaint is furnished to brim.

demeanor when proper information or configurate is summer to him.

Warrant of arrived to be issued by Justice of Marine or District Court in New York city, or by Justice of the Peace, Police or other magistrate on receiving security for costs and affidavit of violation against non-resident emporarily within jurisdiction, or person whose name and residence are unknown, to be committed or held to bail to answer charge.

Swirch recreate to be issued by same magistrate, authorizing search of house, market, beat, crate, can or driver building, and to break open any apartment, chost, bur, looker, crate or broket and to examine contents, provided proof or probable cause to believe in concentment of game or fish, taken during close season, be furnished, and also security approved by magistrate for damages sustained by defendant, if he be found not to have violated the law.

Sefectal Game officiers.

to have violated the law.

\*\*Game Constables.\*\*—Board of Supervisors at a regular meeting, by majority vote of members, may authorize election by each town or city of one or more game constables, they to be chosen at town meeting for term of one year, to take eath of office and have power to serve process under game laws, like town constables in civil cases.

\*\*In Kings County.\*\*—To be appointed by Board of Supervisors at a regular meeting. Term to expire December 31 after appointment, upon successor qualifying.

\*\*Wryrants of arrest in actions by Kings County game constables, as in cases provided by Section 179 Code of Procedure (old code), except no undertaking is required from plaintiff. Sheriff of Kings not to exact deposit or pay from plaintiff. on such arrest.

iff on such arrest.

Compensation of Game Constable to be same as for services by town constables, and also one-half the penalties recovered

him. Neglect to prosecute by him, on proper information, punished

by him.

\*\*Xightet to prosecute by him, on proper information, punished by forfeiting \$25.

\*\*Failture to Recover by Him.—The costs to be paid to defendant by the county.

\*\*Game and Fish Protectors.—The Governor authorized to appoint eight to enforce the game laws. Actions by them to be in the name of the people. Terms of office to be three years from date of appointment. Yacancies filled by Governor. May arrest without warrant any person violating the game laws. Person to be taken before any magistrate having jurisdiction, who shall proceed without delay to try, determine and enforce judgment. Traveling expenses not exceeding \$230 in any year for each, allowed, besides salary of \$500, payable by State Treasurer.

\*\*The protectors now holding the office are (see Forkest and Steeland, Step 1, 30, 1880); S. V. R. Brayton, 59 Division street, Albany, N. Y.; John Jessup, Hudson, Columbia County, N. Y.; Sylvester J. Palmer, Indian Lake, Hamilton County; John Liberty, Elizabethtown, Essex County; Daniel B. Horton, Ithaca, Tompkins County; G. M. Schwartz, Rochester, Monroe County; William P. Dodge, Prospect, Oneida County; John J. Collett, Cobleskill, Schoharie County.

County.

Local Legislatoris.

Boards of Supervisors at annual meeting may make any regulations or ordinances protecting other birds, fish or game. Also for further protection of those above named, creptivitid deer, and may prohibit hunting or fishing in particular localities, or waters within their counties for limited periods and during certain months. They may prescribe punishments and penalties and adopt measures to enforce and collect same. Such regulations and ordinances to be published in the county papers in which session laws are published. Certified copy to be filed with County Clerk.

Nate.—The annual meeting is in November in each year.

They may ruse by tax, same as other county taxes, an ammount not exceeding \$1,000, in any year, to aid the enforcement of the game laws.

Respectfully submitted,

Area Crook.

# PHILADELPHIA LETTER.

# PHILADELPHIA LETTER. When the subriles an unusual quantity of running quail in the subriles of Philadelphia. At Germantown, Frankford and West Philadelphia, numerous covies have been seen in the yards of the wealthy residents. These birds were not breel here but have migrated from sections where more broods have been reared than can be supported through the white. It is always the case when the quail has enjoyed a favorable breeding season, as the past spring and summer have proven; instinct prompts them to distribute themselves, and search a country where fewer birds have been bred. The average number of bevies to an ordinary farm of seventy-five or one hundred acres is seldom more than three or four, unless a great quantity of grain has been planted, which would then turnish the necessary stubble requisite for feeding grounds and prevent too great a migration. Our season for quall shooting opens next week, and still the foliage remains green. Poor prospect for successful cover work, is it not? November 1 should be the commencement of the open season; by that time the trees would be devoid of a part of their leaves and the growth of the birds as-

sured. A few woodcock are coming in; these from the northern and more elevated sections whither they have winged their ern and more elevated sections whither they have winged their flight to pass their moult, and to remain until driven back again by the early cold snaps of the mountain regions. Here, while on the subject of the migration of birds, let me mention a discovery your correspondent made regarding the flight of the sora rail to our river thats this season. Shooting for rail began Sept. 1. Few birds were at first found, and only those that had been hatched on our marshes; the tides during the beginning of the month furnishing enough water to afford fine sport had a great quantity of rail been present. The cause for this scarcity was evident—the flight had not come on.

It was about the 8th to the 10th of the month, I think, as your It was about the \$\fotnome{\text{to}}\$ the both of the month, I think, as your correspondent was making every effort to go to sleep, having retired about eleven o'clock, innumerable rail were heard passing overhead, and continued so for over an hour. The "crek crek, keet keet," of the sora was plainly distinguishable. Myriadis must have arrived on our shores that night. Curious to know the result of this flight I made inquiry the following evening and learned that every hoat that had gone on the river reported from fifty to seventy-five rail, each "poor little birds in poor condition," evidently owing to their late migratice.

Carrious to Row the result of this magnat man company of collowing evening and learned that every boat that had gone on the river reported from fifty to seventy-five rail, each 'poor little birds in poor condition," evidently owing to their late migration.

About the latter part of August, a similar flight of grass plover was noted by the writer as he sat in his room late one evening, but inquiry was not made as to the shooting which followed. On both occasions the night was a drizzly or hazy one, and I have always noticed birds of all kind, choose such seasons for their migrations, whether it be by day or night.

It may be of interest to your readers to know that Mr. J. Warner Kinsey, of Barnegat, has associated himself with a number of prominent Philadelphia and Canden gentlemen, and the company are about erecting a commodions hotel on the two-nile beach property near the inlet. The building will be large enough to accommodate three or four hundred gnests, and the names of such liberal gentlemen as Gon. Grubb, Allem Middleton, B. F. Archer, W. F. Baily, F. Fenimore and a lost of others gaurantee the success of the enterprise. Burnegat lalet, you know, has long been famous for its fishing, and its waters teem in proper season with the blue fish, bart, black fish, bass and weak fish. A proper legislation will be made for a commod ack fish. A proper legislation will be made for a commod ack fish. A proper legislation will be made for a commod fish and fowd at this point, the good effects of which have already been noticed in the past year.

One damaging kind of shooting followed by the baymen of the Jersey Coast should be stopped—that of night shooting for black duck as they come into the ponds to feed; watching it is called. It has the effect of making the fow extremely wild, and many appear to look with suspicion on any great number of their own kind collected together, evidently suspecting them decoys.

The damaging results of the continued harassing of the canvas back and red head on their feeding grounds in

### THE MINNESOTA DOG POISONING AGAIN

Glen Allen, Va., Oct. 14, 1880.

GLEN ALLEN, Va., Oct. 14, 1880.

1 reached southwest Minnesota on or about the 25th of August last, going direct to Fairmont, where I remained until I left the State about two weeks ago, hence I have no personal knowledge of the Windom people or their dog-poisoning performances. What I learned in regard to that matter was derived partly from members of the St. Louis Kennel Club and partly from editorial articles in the Windom Reporter. The facts then alleged were substantially the same as those detailed in your columns by "Windom Pol Ifunter"—that a number of bird dogs had been poisoned; that the poisoned dogs were owned by both resident and visiting sportsmen, but that the residents were the principal sufferers, and therefore the presumption arose that the visitors were the poisoners. This was the theory advanced at the time by the Windom Reporter, and I see it is now indorsed and re-affirmed by the "Windom Pot Hunter" an injustice in this matter, I will quote his own words: "Hence it will be seen that the Windom sportsmen are the principal losers of dogs, poisoned, as many believe, in the interest of non-residents." And again, "I have no doubt the Memphis dog at the meat that was laid for the Windom og."

Now, we had a different theory on the subject. We were certain the villainy was one committed by Windom sportsmen.

Windom dog."

Now, we had a different theory on the subject. We were certain the villainy was not committed by Windom sportsmen, for sportsmen do not poison dogs. And the same reasoning applies to the visiting sportsmen, now supplemented, if such a thing were necessary, by the additional fact that the visitors did not arrive, according to "Pot Hunter's" own dates, until three days after the work of death had been inaugurated. We believed them as I believed the act believed the deal weed the believed the then not arrive, according to "rot fundres" own takes until three days after the work of death had been inaugurated. We believed then, as I believe now, that the deed was done by the pot hunters of Windom, and we deemed it our duty to throw out a word of warning until such time as the resident sportsmen and better class of citizens should be able to manage the vicious element which was then in manifest ascendancy. How near we were right in our conjecture is sufficiently attested by the limping logic and foolish innendoes which glisten through the bewildered sentences of their chosen clampion and spokesman.

Windom is not the first Minnesota village that has been injured and dishonored by men of this stripe. Four years ago Winnebago was the soat of a nest of dog stealers, but the citizens and press of that town, instead of flippantly surmising that foreign sportsmen were the thieves, promptly took the matter in hand, ferreted the raseals out, and Winnebago speedily became one of the most popular hunting centres in flos State.

Windom takes the other plan. The tone of "Pot Hunter's"

communication is in the very spirit of the Repurter's editor-ials. Its aminus cannot be mistaken. It extends a specious welcome while it breathes a latent menace. There are pow-der and shot for sale, and the wandering sportsman must be cajoled, but the birds, the birds of Windom, are a perquisite second to the alors.

welcome while it breathes a latent menace. There are powder and shot for sale, and the wandering sportsman mist be cajoled, but the birds, the birds of Windom, are a perquisite sacred to the elect.

What are "Pot Hunter's" grievances? He has two: and he dwells on them in pathetic cadence and with "dunmable iteration." Twice he tells us that some visiting hunters sold or tried to sell their birds; and three times, and with three separate and distinct growns, he informs us that "they brought their annumition with them!"

With the former of these charges this controversy has nothing to do. Men who make commodity of their game are not sportsmen but pot-hunters, and they and "Windom Pot hunter" had better settle the matter among themselves in a family way. I will here state, as a matter of fact, that the Eastern and Southern men who take hunting trips to the West rarely, if ever, sell their game. During the past few years I have hunted with some scores of them, and not a single instance of the kind has fallen within my observation. They are guilty, however, of a much graver offense, viewed from the pat-hunter's standpoint. They give away their birds, and thus unterly min a trade which they would otherwise only partially injure.

The other charge carries its own answer. People buy ammultion as they buy everything else—where they can get it most conveniently. Let Western towns keep a reasonable stock of a fair quality, and visiting sportsmen will soon find tout. No nan on a second visit carries ammunition to Albert Lea or Fairmont.

Throwing this question into its briefest form, we find that a sportsman may get quarters at Windom by complying with certain demands, either expressed or implied:

1. He nuxt uses such ammunition as "Pot Hunter" chooses to furnish.

to furnish.

2. If he can kill birds with it he must not sell them. To do so would be an infringement on the pot-hunting mo-

nopoly.

3. For the same, or a yet deeper reason, he must not give

b. For the same of a 1/2 shift bright way.

4. He must neekly endure the wrath of vengeful farmers, whose hemp has been trampled down by the privileged order whose hemp ha

of pot-hinters.

5. Fulling in my of these requirements, his dogs shall be poisoned and himself villified.

I respectfully submit that the demands of "Windom Pot Hunter" are unreasonable.

WANSEL

### MISSISSIPPI TURKEY HUNTING.

A LREADY many of our sportsmen may be seen looking after the condition of their trusty breech-loaders, putting them in order for the grand gala day; for all will go on the 15th—some to enjoy the chase of the fleet-footed deer as he glides gracefully from his long and uninterrupted summer retreat with the bugle notes of the eager pack in full cry at his heels. How, beaufful! how grand! He emerges from the thicket a full quarter in advance of the hounds. He stops and listens. It is the old familiar sound that so often disturbed him the winter before. He does not tarry long, for the restless pack is soon at his heels. He bounds away and is soon far in advance of his eager pursuers and is brought down by the steady aim of some hunter who has taken a stand for him; or, perhaps, he cludes both hunter and hounds to run the gaundlet at snother time.

Many of our sportsmen care very little for deer hunting and

cance of his eager pursuers and is brought down by the steady alm of some lunter who has taken a stand for him; or, perhaps, he laddes both hunter and hounds to run the ganntlet at another time.

Many of our sportsmen care very little for deer hunting and prefer to take their setters and pointers and hunt the quail, of which we have an abundance. There are others who go forth in search of that most beautiful of all game birds in America—the wild turkey. The sportsman who has not hunted this bird has missed the most pleasure-giving excitement of all sport connected with dog and gun. I guarantee that it will cure any man in the world of the most obstinate case of blues. At this season of the year they go in flocks, one or more broods together, with one or two old hens, who keep a sharp lookout for hunters, bawks and other varmints that are likely to disturb the young ones. Upon the approach of danger they give the alarm and away goes the brood to the brush. They are about grown at this season of the year, and the young golbers are in what we call the "Shanghai" state—rather gawky and awkward. The young hens are better developed and are more beautiful.

The first thing we do preparatory to a burkey hunt is to hunt up our turkey caller, clean the dirt-dauber's supply of dirt and spiders out of it, give a yelp or two to see that we have not forgotten how, get our horn, dog and gun, and then we are off for the woods.

After getting to the woods, we drive every part of the country in which we expect to find them, particularly around small fields that have been planted in corn and peas and surrounded by woods. The dogs—usually hounds or setters—being good reliable ones, know what we are hunting, and never a wilmper do you hear from them unless they seem a furkey. When they "strike," if cold, hey circle nauli they strike it fresh and warm, where the turkeys have only a short time before service been planted in corn and peas and surround to see a first them on horseback—if hounds, in tull ery; if setter, never a worl mut

they become thoroughly educated, and when flushed the hunter sometimes has to wait till near sundown or roosting-time before he can get them to unswer; and when they have concluded to come they will slip on you without saying a word. When the hunter finds them so wild as this he has to be very particular, when the game comes in sight, not to move any portion of his body, or the wary bird gives his note of abrun (qut !) and is off like a bullet. If a housquite lights on the hunter's nose he must let him remain and bite, or lose his turkey. I have sometimes found them so wild in the latter part of the day they would pay no attention to a yelp any time during that day. I might catch flush them in the early part of the day they would pay no attention to a yelp any time during that day. I might catch ene slipping on me and kill it, but when I find them so wild as this I quietly leave them and get among them early the next morning, and find no difficulty in killing one or two at that time; but after I have fired my gun once or twice, the others become very shy and are hard to kill.

### A MUD DUCK HUNT.

YEARS ago a half dozen of us college chums used to spend our spring vacation in a crusade against the water-fowl which were so abundant in the marshes along the east bank of the Father of Waters, below Burlington, Iowa. Greek roots and conic sections were banished from our minds, and we at least had a free and easy time, with no learned professor or conceited tutor to spend several hours a day in finding out how little we knew, although there were numerous attendant hardships. We usually camped on an island several miles below the town, to avoid the labor of rowing back every night, and the fickle-minded weather-clerk who was on duty during March or April frequently made it decidedly unconfortable for us. Yet when nature refused to snile we tried the lardler to be merry, and with the assistance of the wit of the college, who was always one of the party, generally succeeded fairly well.

The college, who was always one of the party, generally some caded fairly well.

We picked our company, and were disposed to be anused when "The Duke" proposed to go along. But when he insisted on going, in spile of numerous broad hints that his absence would not be painful to us, it became positively annoying. Jones, our humorist, came to the rescue, and with a sly twinkle that promised fun, said the Duke must go. It was accordingly arranged that he should be one of the party.

The Duke was one of the characters that help make up a variety in the world, though just what he was created for was never clear to me. He was a born and bred dandy, a masculine Flora McFlimey, and only just a trifle less feminine than his fairer sisters. The chief objects of his life were to wear fine clothes, take care of his magnificent whiskers and simper in bad French to girls who were shallow-pated enough to listen. It would be impossible to conceive of any human being farther removed from the typical sportsman, and what simper in bad French to girls who were shallow-pated enough to listen. It would be impossible to conceive of any human being farther removed from the typical sportsman, and what he wanted to go duck duck shooting for we could not guess. Yet when it was arranged that he was to go he zealously began preparations, and when we called for him on our way to the depot he had enough baggang to fill a Saratoga trunk. He had never owned nor handled a gun, but had purchased the best in the market for the occasion. His supply of amnumition was more than the whole party could use, and he had several changes of linen haid out. But the Duke's costume was immense. The day was warm, and he had on a new light suit, flaming neckie, long-legged patent-leather boots, sikk hat and havender kids. We remonstrated in vain, and the Duke started off the best dressed man that ever left home for a week in a swamp.

silk hat and lavender kids. We remonstrated in vain, and the Duke started off the best dressed man that ever left home for a week in a swamp.

When we were fairly off Jones unfolded his plan, which was simply to give the Duke a mud bath. The swamp is full of channels, in which the water is two or three feet deep, and all the soil is soft mud, washed in by the freshets, so that the boats were in constant use. There were eight in the party, and the plan was to take three boats, in one of which should be only the Duke and one other man, and at the first good chance to dump him. It was agreed to, the well-worn cards brought forth, and while the Duke innocently looked on Jones was condemned to put his own plan in execution.

Early next morning we pulled out of East Burlington, and two or three miles below began to reach the feeding-grounds, where the ducks were busy with their morning meal. The boys couldn't resist the temptation for an occasional good shot. The Duke caught the fever, and leaving Jones to manage the boat was soon banging away as fast as he could load and in such a reckless style that he was in more danger of shooting himself or some of the other boys than a duck. Jones watched his chance, and it soon cume. The boat was sou close up to a particularly soft mud bank, and when the excited Duke was standing up in the stern and ready to fire, a quick jerk did the business. The grow went in first, and he followed it as far as his shoulders. The managed to get out slone, and, half strangled, made a dash for the bank to get out of the water. This fairly burled his lower extremities, and he had to be helped out.

out of the water. This fairly buried his lower extremities, and he had to be helped out.

What a spectacle he was! His glory had departed in an instant, and his love for duck hunting had gone with it. All he wanted then was to go home, and we fished out his gun, put bim in the small boat, and started him for Burlington, sadder, wiser and not half so handsome as when he started. In spite of his injunction to secrecy the story leaked out, and in his mortification the Duke went off on a European trip, and failed to return. He has probably been in places since where he had more sport than duck hunting on the Mississippi marshes, but he don't know to this day that his misfortune was not solely the result of an accident.

Corr.

### ECHOES OF THE "DITTMAR SPORTING POWDER."

HANCOCK ON DITTMAR POWDER. -- FOREST AND STREAM (he leading American sporting paper, is making war on the Dit mar powder and says it is not fit for use. — The Hancock (N. Y.) Herald.

Macon, Ga., Oct. 12.

Editor Forest and Stream:
Allow me, as one of your subscribers, to thank you for the entirely convincing articles concerning Ditmar powder. I have frequently used this powder, but you have so clearly demonstrated its danger that henceforth I discard it. J. S. B.

Futton, Ill., Oct. 16.

Editor Forest and Stream . Your writing up the true character of the Dittmar powder as appreciated by many Western readers of the Forest and

Duck shooting has been better here this fall than for many years, but the mallard are not in as good condition as autumn ducks generally are. \* X.Z.

Cricygo III Oct 15 Editor Forest and Stream :

Editor Forest and Stream:

A paper that can give us such clear, intelligent and decisive articles, as was your late treatment of the "Ditmar Sporting Powder," is just the kind of a journal the American sportsmen want. Allow me, and numerous others in this city with me, to thank you for having set at rest, once and forever, the question of the safety of Mr. Ditmar's powder. The average gumer has no time to study these things. You have shown us that hereafter we may rely on the Poiest and Stiegand for just such information and advice.

N. N. J.

Nashville, Tenn., Oct. 12, 1880.

Assiville, Tenn., Oct. 12, 1880.

Editor Forest and Stream:

I have been using the Dittmar powder for the last year and just ordered a box from Mr. D., who failed to send it, his charge d'affairs writing: "Mr. D. has been sick for some time and we are out of powder." But a friend of mine loaned me one of your papers (Sept. 23, 1880) and called my attention to your lengthy article on Dittmar powder, and I must say I am greatly surprised at what I learn. Under the circumstances I of course will discard the use of this powder; and am now annuzed that all these things should have remained hooded until lately. A party lost an arm here some time ago by his gam exploding; it was said the powder was made in St. Louis and was the "noiseless." I suppose it was closely allied to the Dittmar. I have often wondered why some loads were so much more effective than others. I really like to shoot it, as it is clear and free from that "blarsted" cannonading that we have in the black. Editor Forest and Stream

Chechwering Old Brown.—How often do I turn your pages over, and how I long for Saturday to come. I often wish you came twice a week. But sometimes you make me sick and discontented. I know you mean no harm, dear Fonesr, but when I read of the game and fish that others are taking, and sellish I can only steal off a few hours at a time. Once, before my wings were clipped, I too enjoyed my gun and dors.

and dogs.

Two years ago I knew a swamp of about a mile in length where the woodcock just laughed because no one was allowed to shoot in that swamp. It was owned by an old farmer by the name of Brown, a veritable dog-in-the-manger, who would not shoot himself nor allow visitors to shoot. His hired man told me, one time when I ventured on the ground, not in a very mild manner, that Mr. B. did not allow any shooting there, and that I had better leave, and forthwith I left. Years before men had bagged fifty and sixty birds per day in that swamp, and a desire possessed me that I must hunt that swamp.

I feft. Years before men had bagged mty ann siny ortus per day in that swamp, and a desire possessed me that I must hunt that swamp.

I heard of the Dittmar powder, no smoke and very little noise. I went up to the city; saw the gun-dealer; he showed me a sample of the powder, and I ordered a can, thinking all the time of my per swamp of woodcocks. In due time I received the powder, and how well I remember my imaginations as I rode home, thinking of the following day's sport. Already I could see my two setters, Dash on a point, and Dandy backing him up. Then I was looking through the alders to find an opening where I would be the most likely to get a shot. Then I would speak very low to my dozs, "Go on," and Dandy would creep up. "Weeter," would go the bird. Then I would throw up my gun; a puff, a little noise, and, yes, I could see the fine feathers through the top of the alders. Old Brown couldn't hear that—no. "Dead bird." In would come Dash with a fine longbill. But where is Dandy? Stooping down I would see him just a little further on stiff as a poker—and so did my thoughts run.

see him just a little further on stiff as a poker—and so did my thoughts run.

I was home about two o'clock. I loaded up six shells with Dittmar according to the "directions." I knew of a small flock of quail near home, and in less than two hours Dandy and Dash brought up hard on. I always let my dogs stand one or two minutes. While I was waiting I thought it was such a good place to shoot I must have two birds, and so I took the Dittnar carridges from my gun and put in two of Hazard's. I could rely on those, I got one bird with each barrel when they first got up. That's pretty good, I thought. Now for Dittnar. The next was a cross shor. I looked across my old Parker expecting to start the feathers. Well, the gun went off, but not until after the bird had gone before

And with the language of one of old I cried, "Great

it. And with the language of one of old I cried, "Great Ponny, ye are too slow!" I tried another Dittmar cartridge with the same result, and that was enough. I shot two more birds with black powder, and I came home. I fired the four birds with black powder, and I came home. I fired the four they all went off, but some of them hated to, awtully.

But I did not give up about that swamp. You see, dear Forest, old man Brown had a daughter, and she was pretty, too. Well, to make a long story short, I made Miss Mary's acquaintance, and through her good graces I received an invitation to come up and put my horse in her father's barn. She told me that some of the neighbors did not allow hunting on their farms, but that I was welcome to hunt anywhere on their farms, but that I was welcome to hunt anywhere on their farms, I thought to myself, "Biess your heart, I only want to hunt down in your father's swamp; have been trying to get there for two months." Of course I went, and I made the old swamp just ring. The first day I bagged twenty-seven birds, not all longibils, there were three partridges and five quail among them. Dash and Dandy backed up each other, and more than once did I lose them and find them stiff as a poker.

as a poker.

Lake Okeechobee,—Until lately little interest has been manifested regarding Southern Florida. With the indux of settlers and piessure seekers, the region, made of interest by the Seminole war, is attracting more attention. The expedition of the Forest and Streem for the exploration of Lake Okeechobee settled the disputed point about the extent of the lake, and whether it was accessible to anybody but an Everglade roving Indian. Coming down the St. John's River has April, I met a Major Allen, who still owns the little cause, Forest and Streem est of its islan

long and flat and the resort of numerous what lowe, is the largest of its islands.

Since the expedition of the Forest And Stream, the solitudes have been disturbed by a little steamboat, fifty-nine free long, named the Mary Bell. Several times it has made the trip from near Lake Harvey, and second Lake Offeechobee. The excursionist, well provided with sporting materials, leaves the St. John's River steamboat at Tuscawilla, on Lake Harvey, and after a wazon ride of eighteen miles is placed on board the little steamer. Soon he is firing briskly away at alligators, ducks and deer, perchance surprised by the intruder. Plocks of cranes, lose, gunats and curlews rise continually. There is no finer place in Florida for the taxidemist, eager for brillian plannage and snow white plumes, than this newly opened region. When any desired game or bird is winged the rowboats from the steamer act as retrievers.

the infruder. Flocks of cranes, 10es, gunars and currews ruse continually. There is no finer place in Florida for the tax-idermist, eager for brilliant plumage and snow white plumes, than this newly opened region. When any desired game or bird is winged the rowboats from the steamer act as retrievers. As down the river you wind, going four times the distance in a straight line, new objects of interest are continually being disclosed. For ten days or two weeks the excursionist tires, only from the monotony of firing from morning until night. The deer hunting is especially fine. The ranges are through regions seldom hunted, and where the noise of your guns often only awakens curiosity. Last winter, thirty miles from this region, I was surprised one day by a deer walking up to within thirty vards, and there standing looking at me, as much as to say, "Who are you? What are you doing here?" A little later fired several rifle shots at two deer standing at about one hundred and fifty yards, without exciting anything but their peoplexed curiosity.

It is not an unusual occurrence to see fifty or seventy-five deer during a day's ride through this region. Next winter another miniature boat is expected to be launched, so that ripse can be made to Okeechobe twice every month. Okee-hobee secuns to be changed. An enterprising land company, in which some English capitalists are interested, have secured a charter from the State for the drainage of the Lake into the Gulf of Mexico. Between the Lake and the Gulf of Mexico. Between the Lake and the Gulf of Mexico. Between the Lake and the Gulf in length has to be cleared through a sawgrass swamp, and the lake will gradully drain itself. Their object is to gain several millions of acres of rich bottom hands, and after giving the State its portion to sell at reasonable rates alternate sections. This land, it is shoped, will be productive of tropical fruits and early vegetables, which the steamers will transport northward. Whether the scheme will succeed we cannot tell, but we do kn

steamer is not only monotonous but it is disgraceful and abominable. The captains of these boats ought, for the sake of decency, to put some limit to the cruelty of their passen-

gers.

Pennina Game Nores.—Gulf Hammock House, Otter Greek, Leey County, Fla.—Florida, from present indications, will have an abundance of game this fall and winter. We are having fine bagging of quall, curlew and duck right in front of the house, Cluff Hammack House), but Captain Wingate has stopped the shooting of them until more guests arrive at the house. The guests that are here now are having fine sport and delichtful weather for hunting. For our bear hunt the other day we started at 6 o'clock. We had to ride about a mile, and when we got there we found that the bear had left about a mile, and when we got there we found that the bear had left about an hour and a half before; but our dogs were eager for the fray, and so were we (six of us), and off we started. We had a run of some eight miles before the dogs brought him to bay up in the top of a large live oak, and a very bad place for a shot. We concluded to let him have the contents of one of the cartridges out of a Henry rifle, when he came tumbling down like a bag of cours; he no sooner struck the ground than the dogs laid hold of him, and he did the same with them. One man in his excitement ran up and survey by the same with them. One man in his excitement ran up and struck bruin across the head with his fine Scott gun and completely rulned it, which taught him a dear lesson that bruin's head is hard. We had to let the bear baye the contents of one more cartridge out of our Henry, which finished him. When dressed he weighed a trifle over 300 pounds. We also brought in a fine deer with us. The Captain has secured one of the best bear hunters in this country, Mr. Watkins, with his pack of dogs. We will evidently have fine sport fishing and hunting this winter in Gulf Hammock.

Chickens, Ducks and Quali—Milford, Nob., Oct. 8.—I

Chickens, Ducks and Quall.—Milford, Neb., Oct. 8.—I left Boston the last day of August. My first stop was at Worthington, Minn. My party consisted of myself and four dogs, and I had my hands full with the various changes of baggage-cars and baggage-masters. I spent the month of

September in Worthington and vicinity, bagging to my own gun three hundred and fifteen chickens, besides many mallards, teal, golden plover, etc. My shooting was done over puppies, and I land a great deal of bad weather, or my bag would have been larger. When I left Minnesota (Sept. 17) geese and ducks were coming into the prairie sloughs by the thousands, and by this time a lover of that kind of shooting could have all be desired. I arrived here September 29 to attend the field trials of the Nebraska State Association, a report of which has been forwarded to you, and I will make no comment, except that I was fortunate enough to win with my Dorr, a dog that I had not put in trim and had no intention of running.

I am now in a good quail country, making as good a bag as I care to daily. I can easily start ten to twenty coveys a day, but until the leaves fall from the trees in the "draws," very large bags cannot be made. I propose to work eastward in a few weeks, bringing up at Vincennes in season for the trials.

SNARING IN CONNECTICUT.—Tolkind Co., Conn., Oct. 9—Wild pigcons are quite plenty this season; but they are wild, and I have not heard of but one large bag being taken. They feed early, then take the woods during the day. The town of Stafford seems to be their resting-place this year. Woodcock are scarce now—the summer birds gone, and the late birds not yet come. That is, so I have found it to be, the quail scent to be quite plenty but very much scattered, and in small coveys of 6 and 8. Variridges are plenty on the mountains and swamps in mid-day about Mansfeld and Wellington; but they are most awfully snared, and their total extermination is not far distant. The Connecticut law, allows them to be so taken on one's own land, and the law is most terribly shused; almost any furmer allows boys to set snares on his land., but will not let a decent man with a dog "kill all his game," as he says, showing his ignorance on the subject. The truth is, that he and his boys cannot kill a partridge with their old Queen's arms unless they get one sitting on a log. Snared birds are sold here, and in all towns about here, in total violation of the law. If there is a sportsman's club, or any persons in this State interested in this subject who will come here or back me up in this subject will do all I can to stop this mean business of the dealers in purchasing these birds.

Michael Michael Mores—Jan Arbor, Oct. 9—On Thursday last, the 7th inst., Mr. J. Haskell of Bradner, Ohio, and myself met for a little hunting frolic for quail and woodcock and to try the crounds on the Toledo section of the Am Arbor Railroad. Mr. Haskell brought with him his two farbor labek-and-tans Ned and Sue, seven months old, to which he is strongly attached on account of their hunting qualities. The day was pleasant and the birds tolerably plentiful, especially the quail. We found a few woodcock in some of the wet grounds thereabouts, but they were scattered wild. The quail were in fair numbers for this portion of the country. Our best success was in the large beds of rag-weed that skirt the woods on the west of the railroad. The pups behaved beautifully and never have I seen prettier or better work done than was accomplished by those two pups: they countered, backed, dropped and retrieved all by motion of the hand in a style equal to the best trained old dogs that I ever saw. We made a pretty fair bag for this section, eleven quail and four woodcock. My great helight was to watch the movements of these young pups and see the charming work done by them. I was more than pleased at the splendid results achieved by their training, and Mr. H. tells me he has three more of the same litter almost as good. We need a little more rain to make good cock shooting in the swamps and swales about bere. Rabbits and squirrels are thicker than I ever saw them before, and when the first snow falls we shall try our beagles among these frisky little fellows hereabouts, when I will report results.

hereabouts, when I will report results.

Wiscossin.—Fon du Loc., Wis. Oct. 10—The shooting in this vicinity is now quite satisfactory, as ducks in great numbers have filled the marshes, and our sportsmen are improving the time to good advantage.

The deer hunters also are getting in motion for the coming season, that under existing laws closes Nov. 30. The old parties go out as usual, and there seems to be charms in deer studking not to be resisted, as we find them going out with her regularity of the seasons. Messes. Carpenter and Adams will locate in the vicinity of Florence, Wis.; Mr. and Mrs. L. M. Wyatt left the R. R. at Wancedah, Mich., and expected to pitch their tent twenty-five miles away in their favorite location. Mrs. Wyatt accompanies her husband annually to the woods, this being her fourth season. She has all the enthusiasm of an old compaigner and is entirely at home among the wilds of the North.

Messes, S. B. and John Amory and Mr. Carter constitute the veteran organization and expect to locate in the vicinity of Hermansville, Mich.

All these parties go out well equipped and are usually suc-

of Hermansville, Mich.

All these parties go out well equipped and are usually successful, and we expect a satisfactory report at the close of the

cessin, and we cape a surface of this epistle as it is written on a tin plate twenty-five miles from any place.

Am in the wood and camp, am having fine days, good fare and plenty of game.

fare and plenty of game.

Arkansas.—A correspondent of the Germantown Telegraph writing from White County, Ark., says of the game of there:

"As this State contains much land which, on account of its swampy or its rocky or hilly surface, cannot be cultivated, the larger animals confine themselves mostly to these uninhabited districts, from which they make accasional raids into the settlements and make sad havoe among the farmers' calves and pigs.

"The deer and turkey have more impudence and refuse to quit the land of their nativity. They still occupy the fields, and even sometimes the gardens of the settlers. They being very fond of stock peas, the farmers must be very vigilant both might and day to protect their crops. Many are shot near by, and frequently several deer are taken almost within the suburbles of towns containing two thousand inhabitants.

"During the game season the boats navigating the White, Arkansas and other smaller streams, are loaded with such game se deer, bear, turkey, rabbits and prairie chickens, which serve to feed the citizens of the cities and towns ulong the Missouri river."

the Missouri river.

A HINT FOR PATTERN TRIALS .- Boston-I wish to call attention to one thing that has no doubt caused many runners to be dissatisfied at certain times with their guns. I saw a young man targeting his gun at 40 yards on pieces of paper 30 tuches square and he was very much dissatisfied with it, say-

ing the choke was shot out, and blaming the gunsmith for deceiving him about the pattern, and vowing that he was going to get a new gun at once, etc. Having had considerable experience at targeting guns, I went and got some sheets of paper 4ft. square, and asked him to try his gun at then: which, after asking if I supposed he could not hold a gun on to the "side of a house," etc., he reluctantly did; when to his surprise he found that the gun made a first class pattern, drawing a 30 inch circle from the centre of the charge, which, however, was not in the centre of the target by considerable. I speak of this, as I have often seen old gunners stick up a piece of board or a small piece of paper to test the pattern of their guns, and judge accordingly, no matter whether they held on or not; and many good guns have been hastily condemned on this account.

BUNCHED Short,—Neepart, Ky.,—As I consider chilled shot, especially Tathani's, to be superior to any shot made, I feel a lively interest in knowing how you can account for the wonderful performance recorded in you paper of Sept. 16, under heading "Bunched Shots." I have used this shot for some time and am at a loss to understand how any loose shot can perform such feats. I have tested this shot in choke and cylinder bores and consider it but justice to the manufacturers to have this matter explained, as to me it—seems impossible. C. J. S.

The fault is not with the shot but with the gun. less reason for the bunching of chilled shot than of the ordinary shot, but some guns do nut the pellets into a bunch. In the 1875 London Field Gun Trial one of the guns was barred out

on just this account.

Pennsylvania—Pottstown, Oct. 12.—Dear Sir: Our guinning season opens here on the 15th October. Partridges and rabbits are more plentiful this season then they have been for several years, and we expect lots of sport. Woodcock are scaree in our section of the country; squirrels more plentiful this season then they were last, as are also plover and pheasant. We have some very fine dogs here and plenty of sportsmen, but we have some very inconsiderate straggling hunters here, as they are not sportsmen noreven port-hunters, for I heard of some that had been killing partridges last week, and have no doubt the same parties have been shooting the poor, skinny rabbits. There is a spotter looking after them, and if they are anglithey will get the full extent of the law. Those when the season opens the hunters will not go out and see who can kill the largest amount of game. As long as the weather is warm game is not in condition to kill, and if it is slaughtered up to the full during the first weeks, till the thus comes thar it would be in condition, you can scarcely find any. So a word of advice: Don't kill the half-grown birds or rabbits, as one a month later is worth a half dozen now.

Tennessee.—Savannah, Oct. 12.—Although the shooting season has nominally begun but little has yet been done in that line. I have been out several times, but merely to train a promising young dog, several times leaving the gun at home. Many of the bevies I have found were too small to shoot, and the rank weeds will prevent anything like sport until a heavy frost comes to our relief. Birds are plentiful, thanks to a dry June. The farmers have an adage that a dry June always presages a good crop. I can't say about that, but know we always have more quall when there are no heavy June rains to drown the young birds and "break up" the sitting hens. There is an unusually plentiful crop of mast of all kinds this fall, and in all probability pigeons and ducks will be here in unusual numbers. The weather is tow warm for any sport yet a while. for any sport yet a while.

Western New York,—Ostrego, Octobr 11.—Season mild and flock-duck slow in arriving. The Ontario Hunting and Fishing Society have had some shooting upon their preserve. Red-head and black duck, and a few birds are killed along the coast. Within ten days game will be prime and hunting ditto. Squirrels abound in all the timber along the line of the lake (Ontario); the open winter of '79 and '80, and the abundance of nuts accounting for the same. Partridges moderately plenty. Within ten miles of this city, from 3 until 6 p. m., October 8, I killed two fine black squirrels and a cock partridge. Rabbits and foxes are in unusual numbers. Shooting grounds both for water and wood sport easy of access. F. E. H.

California.—Elk Groce, Oct. 3.—We are too far from you for information as to plenty or scarcity of game to be of much interest to your readers, but if you will give us a call you will find such acres of ducks and geese of all varieties, Canada geese, brant,—as can only be seen elsewhere in some of the Southern States, and I will insure you a hearty welcome from our sportsmen. Deer are very plenty in the hills this fall, and with an occasional grizzly or California lion thrown in, a sportsman must be hard to suit who cannot find enough to content him.

Weight of Ruffed Grouse.—Syracuse, N. Y., Oct. 18.—
I give below the weight of four ruffed grouse, the heaviest
we have any record of in this part of the State: One, 1
11-16lb., killed by M. Knapp; one, 1
123-16lb., killed by M. A. Hudson; one, 1
133-16lb., killed by M. Nicholson.
We hope that sportsmen will send us through the fall the

weight of their heaviest birds killed. Such a record would not be without value. The four grouse referred to by our correspondent were very heavy birds.

MIGRATORY QUALI—Boston, Oct. 11.—As regards the return of the birds, I say that many of my neighbors claim to have seen them this summer and fall, but they are hardly competent to judge, so I don't feel sure of it. The quali law is off on the 15th, and if they are here the gumers will soon find them, and probably shoot some before noticing the difference. A flock (hevy) was seen about twenty miles below my town a fortnight ago. Probably some of those imported by Mr. Downer three years ago, and released them. H. P. T.

INDIANA—Oct. 14.—Editor Forest and Stream: The following leave for the Michigan Peninsula, on a deer hunt, the 21st inst: W. L. Gregery, A. Wysong, R. W. Matthews, Jos. S. Stephenson, J. C. Kerns, J. Swope, R. O. Brown, Riggins and myself, of Lebanon, Ind.; and B. M. Gregory, Zionsrille, and D. C. Burgendthal, of Indianapolis. L. M. Cox, L. Rains, 8. Dougherty, E. Reynolds, A. D. McCormack

S. Daily and O. C. Witt expect to go a few weeks later will give you some notes of our hunt. W. C. C.

FOREST AND STEERM GENERAL PASSENGER DEPARTMENT.—Chicago, Ill., Oct. 14.—The following parties have passed through here since Monday on route to the hunting grounds: C. Langdon, and party of four, from Ohio, going to Quin nisec, Mich.; Dr. C. Gifford, and party of four, from Indiana, going to Poiring, Wis.; Isaac Cuse, and party of eight, from Illinois, going to Quinnisec, Mich.; Whetstone and Fisher, and party of twelve, from Indiana, going to Menemony, Mich.

Shooting at the St. Clair Flats.—Our correspondent, W. B. Wills, Jr., writes as follows about the shooting at this flavorite resort. He says: "I had a good day's sport last Friday (Oct. 8) at the Club. Killed forty-seven ducks in the morning, and on my way home jumped into a corticled with Star, Mack and Kink, and picked up fourteen quait after 4:30."

Ontario.—Belleville, Oct. 13.—Yacht owners now use their craft for conveying them to the marshes, a few mile distant, for the purpose of duck shooting, of which there has been but little as yet, the birds being scarce. Snipe and plover are, however, tolerably plentiful. In the woods game is fairly a undant. Some sportsmen have met with good success among the deer, and a considerable number of partridges (ruffed grouse) have been shot.

ALL AROUND NOTES.— Yellow Bud, Ohio, Oct. 13.—Just returned from an extensive rip through Kentucky, Tennessee, Arkansas, Missouri, Illinois and Indiana. Hunted some, but found game scarce. Killed some chickens—sport hard to equal, when one has (as I have) a first class dog.

S. L. N. F.

Ohio Quali. Law.—Columbus, Ohio, Oct. 16.—You are mistaken when you say law on quali in Ohio is out Nov. 15, as it was changed last year to Nov. 1 to Jan'y 1. I give you this, as some may be able to come and have first of it.

F. F.

ROBINS IN WESTCHESTER.—Supervisors' Office, Town of Westchester, Oct. 16.—A law was passed Feb. 6, 1878, by the Board of Supervisors of this county, which prohibits the killing of robins during the month of October. JAS. HENDERSON, JR.

### SHOOTING MATCHES.

### SPARTANBURG TOURNAMENT.

SPARTANGURO, S. C.

Team match, from Card rotary trap, arranged to throw in any direction, 50 balls, 18 yards risc. Entrance, \$12.50, \$50 added by citizens of Spartanburg. First team to receive 50 per cent., second team 30 per cent., third team 20 per cent., after paying fourth team entrance fee and deducting cost of balls used:

NEWTOWN L. I - October 18 - The Anduhon Red and Gan Club of Brooklyn, E. D., which was organized a few weeks ago, and o which a notice was published in the Forest and Stream, held their first regular monthly shoot on Saturday last for a handsome badge, furnished by the club. It is the intention of the club to have a shoot once a month, and the person winning the badge the most times during the year it becomes his property. Bogardus

### MODERN COCKER SPANIELS.

S there has been so much dissatisfaction felt and ex-A S there has been so much dissatisfaction felt and expressed with the judgments in the cocker and field spaniel classes lately, and as the breed is the most useful all around one existing, and consequently worthy of as much fostering and care as is given to setters and pointers, I have taken upon myself to try and settle a definite standard. To do this I have written to all the breeders of cockers that I knew, inviting them to send me photographs, measurements, descriptions, etc., of their best dogs, and their general opinions on

the breed.

The various information thus obtained will, through your kindness, appear in your columns, and will thus be open to the criticism of the public generally; and I, on the part of those who are assisting me in my task, invite all interested to give vent to their opinions and criticisms through the same valuable medium.

give yent to their opinions and Graces.

valuable medium.

I give you below a letter from Mr. A. C. Waddell, of Topeka, Kansas, a gentleman well known as a breeder and owner of fine dogs. This will be followed by letters from other breeders, and I, with your good permission, will bring Gro. D. Macdougall.

Growth appelled as follows:

other offecters, and t, with your good perfinsion, will bring up the rear.

Mr. Waddell says of the cocker or field spaniel as follows: "Time has revolutionized very many things so as to conform to the desire, if not actually the demands, of sportsmen; for, be it known, history tells us the same sports were indulged in hundreds of years ago. But it must be acknowledged we have advanced wonderfully in bringing beauty to join hands with utility—this with all our domestic animals, until at the present time it is a rare thing to find one so ignorant that he does not know what beauty in an animal is; but the differences of opinion are merely based upon what should be a standard, and the true one will surely be the one, for there is a general idea that all innately drift to, and the dissenters will naturally be crowded back, to disappear eventually.

art that he does not know what beauty in an animal is; but the differences of opinion are merely based upon what skould be a standard, and the true one will surely be the one, for there is a general idea that all innately drift to, and the dissenters will naturally be crowded back, to disappear eventually.

"The spaniel, of whatever strain, is one of, if not the bandsomest of all the breeds of dogs. The beautiful expression of face, the speaking eyes—for they almost talk—the long, gracefully falling ears, and compact, evenly balanced body, all go to make up the most agreeable house pets as well ong, gracefully falling ears, and compact, evenly balanced body, all go to make up the most agreeable house pets as well as deld companions. But the usefulness of the dog overhalances all other attainments, for his intelligence is natural, and a mere association with his owner brings the dog to understand his desires. I am now speaking more particularly of the spaniel known as the cooker or field spaniel. Its creation as a breed has originated from the crossing of the larger varieties with the smaller, until a medium-sized dog has been obtained, of different colors, but not varying very much in formation; and yet, as with all other breeds of dogs, there are many specimens that are unworthy of promotion, and the judges—who are the breeders, as a whole—do mot acknowledge them as true types of what breeders call field spaniels. At the present time more interest is being taken in field spaniels in America than ever before; and as there has been some controversy in regard to what a cocker spaniel should be to be distinct from the other breeds it is well that some standard should be made. The most numerous, as regards color, are the liver and white, the breath of the dogs, yet certainly each one has a right to his choice, as with a dogs, and the black and tan. In Wales they have a beautiful little field spaniel, orange and think they have a beautiful little field spaniel, orange and white in color—the breeds of dogs that are j

meadows or wood. He comes next to a human companion, for he is ever near you, and will seek you out; you need not hunt him. I entered my Josie at St. Louis as a King Charles, she was not grown, and I knew there would not be any full-bred King Charles. Here; so I entered Josie and she took first prize, but they said, "Not a good specimen." Of course not! head too much like the setter, and that is the difference—head between the setter and the King Charles. The King Charles cocker is a dog of many years ago, and the best and handsomest of the cockers as they should be. Not the King Charles of the present day—oh no!—but a much larger dog like the pure Burdettes of to-day, and they are rare. To call such dogs as Whitman's cockers is a farce, they are merely handsome English spanicls, and all the spaniel family are handsome; but that does not make them cockers, and until they establish a standard based upon the reat thing without toadying to any man's idea, why they will fail in making the cocker the best, the prettiest and most useful little dog extant. adows or wood. He comes next to a human companion

extant.

"Mr. O. A. Hubbell, of Stratford, Conn., imported Beau and Blanche, the sire and dam of my old Belle (dam of Josic). He gave \$900 for the pair, and they were the handsomest pair I ever saw or ever expect to see.

"A. C. Waddell."

# THE CARE OF DOGS.

BY EVERETT VON CULIN.

THERE is nothing easier in the world, unless it is cutting coupons off of Government bonds which are your own, than keeping one or two dogs in good health and condition all the year round; but when it comes to the matter of kenneling properly, safely and with regard to health, from sixteen to twenty dogs of various ages, breeds, sexes, temperaments and conditions, nothing under the sun will enable you to succeed but experience. Not the mental experience gained from reading the great authorities—they are helps on the way, and no wise man will pass them unsearched; but the practical kennelman must study nature face to tace. He must become thoroughly acquainted with the individual constitutions, habits and neculiarities of his charges, he must learn to decome thoroughly acquainted with the individual constitutions, habits and peculiarities of his charges; he must learn to detect the slightest change in spirits, appetite, coat, temperature of body, cars and legs; increase or decrease of temperature and moisture of nose; attitude while at rest; gait and carriage; condition of bowels; odor of the breath before eating, etc., etc.; for they all have their several distinct meanings, and the old proverh about "an ounce of prevention" was never more truthful than when applied to the care of dogs.

The first thing in order is a suitable beautiful and the constraints.

dogs.

The first thing in order is a suitable kennel upon a desirable site. As I have carried out my idea of such a kennel at Lakeview, it may serve our purpose to describe it:
Lakeview stands upon an elevation on the western border of an irregular lake two miles long, and varying in width from one hundred yards to somewhat more than a quarter of a mile, and skirted by trees, bushes and a sandy beach. Bounded on the south by corn-fields and clover, on the west by a public road to Dover, and on the north by a convertey whose northern and eastern boundaries are waters of the lake. This, you will observe, gives it the desirable isolation and privacy.

In the centre of the farm is the main kennel, a frame build-

This, you will observe, gives it the desirable isolation and privacy.

In the centre of the farm is the main kennel, a frame building with peaked roof, built upon a brick foundation 3 feet above the ground, and having beneath a besement cellar of feet deep. The building is 30 feet long by 123 feet wide, and 16 feet to the caves of the roof; over the sleeping rooms and running the entire length of the kennel is a loft for bedding and apparatus used in training, etc. The sleeping apartment is provided with a slatted beach, ten inches above the floor, for each dog. These benches are kept supplied with more or less fresh straw to suit the seasons, but are kept entirely bare in very hot weather or when fleas attempt an invasion. Two large doors (one on either side) and a trap-door in the ceiling through which air is conducted to the loft window, are ample means of ventilation.

Next to the sleeping apartment is a close room ventilated by a crossed-barred door on one side and a fort space open between partition and ceiling and into an entry on the other side for bitches in season. Wires, of which I shall speak further on, are used for exercising these bitches.

On the south side is a yard 50ft, by 34ft, Inclosed by a 5ft, fence, from the top rail of which, leaning to upon an angle of 45 deg., and supported at the upper end by shingle lath stringers and posts, is built another fence of plastering laths, 4ft, long. This fence is advanted by a program of the steps leads to the sleeping apartment, another to the sand floored by a horizontal covering of wire net. A flight of five steps leads to the sleeping apartment, another to the sand floored basement, where the dogs are admitted at will in very hot weather. A stout gate with chain and clasp fastening, leads out to another large yard in which stands the cook-house, a frame building 10ft, by 8ft, and 8ft, topeak of roof, and a large cast-iron kettle used in open air for boiling soup, mush, etc. On a terrace in this yard, which is 150ft, by 130l; in size, is built the dw

size, is built the dwelling-house of the kennelmen; and running at liberty in the inclosure are puppies which cannot learning at liberty in the inclosure are puppies which cannot learning the refuger of the property of the continuous products of the continuous products are wires (some single and some double, to suit the strength of the doy), fastened at one end to a wicket made by setting two posts in the ground far enough apart to prevent the dog from going around them, and nailing slats between, and at the other end to a deep set post, beside which stands the individual kennel. A ring is slipped over the end of the wire before fastening, and into this ring is fastened one end of the chair; the chain is snapped into the ring of the collar and the dog has a free run the length of the wire with the collar and the dog has a free run the length of the wires are 3ft. from the ground.

These individual kennels or boxes will perhaps merit a description. They are made amply large and with a double pitched roof and a portchike roof over the opening in front. The box is cut in two, horizontally, a little above the middle, and made to slide the upper part forward to admit any degree of ventilation, and to shut perfectly close in wet or cold weather. The bottom is made separate, and may be removed for cleaning by lifting off the top. It is mounted on two pieces of 4x4 in, timber which keeps it dry and prevenus is rotting. The whole arrangement is exceedingly simple and can be made by any person who is "handy with tools:" besides it is so convenient to take apart, nothing being fastened by nail, screw, both or peg, and scrubbed and whitewashed inside and out.

Romoved at a safe distance are other "private boxes" to be used for sick, exceedingly quarrelsome or ferree dogs. All

Removed at a safe distance are other "private boxes" to be used for sick, exceedingly quarrelsome or fierce dogs. All

are within sight and sound of the kennelman on duty, and are visited at least once each hour during the day and until ten or eleven o'clock at night.

A sloping path leads down to the shore of the lake, where hitching-posts stand for holding dogs while washing, and a flat-botton boat is kept to aid in teaching dogs to swin. Open fields on three sides give plenty room for more exciting exercises, and the surrounding country for real work on game. The dogs are shifted about from general kennel and dyard to small kennel and wire, private box or puppy yard, to smit the different circumstances and the objects and desires of the kennelman.

### TREATMENT IN CASES OF POISONING.

Editor Forest and Stream .

Erry are meaning Kentucky

ELIZABETHTOWS, Kentucky.

Editor Forest and Stream:

In No. 1, vol. 15, in kennel column, under head of "Treatment in Cases of Poisoning," after your good advice as to demuleents, emetics, etc., you specify the poisons and their autidotes, first naming arsenie and give its proper antidote; but would it not have been better to describe the quick method of making sessqui oxide of from, as in some country towns the process is strange to the druggists. But my object in writing is to give you my experiments upon dogs poisoned by strichnia the most common mode of the degroisoner. I will give you one case I had hast week that is fresh, and it will serve to show the whole process. A friend called on me to ask if I could do anything to relieve his black-and-tan bitch that had got a dose of something. It being back of my office in the same yard, I examined her and found she had taken strychnine. I mixed up sixty grains of hydrate of chloral in milk and forced it down her. She had been in convulsions for ten minutes and looked as if dying. We scalled out and returned in an hour. She still had convulsions, but seemed better. Gave sixty grains more of the chloral hydrate, and then, as I had nothing else to do, sat down and watched her. In a short time she appeared to grow worse, and was in such agony I gave her chloroform, which at once rehaved her and stopped the convulsions. It was then I first saw the effect of the enormous doses of chloral I had given. She shivered as if cold and lapsed into profound stupor. I then applied warm wraps to antagonize the effect of the antidote, and after getting her warmed up she began to get better. After watching her form hour longer I left her askeep, and next morning found her well and hungry.

I have had several other cases similar, and bave never failed to antagonize the poison with this antidote: but I would advise any one not thoroughly acquainted with both the poison and the antidote to consult a physician (I mean one who wowships the healing art sufficient to include the brute cr

The treatment of your bitch, suffering from strychnine poisoning, by chloroform, and hydrate of chloral was eminently proper to relieve tetanic rigidity and possibly lessen the number and force of the convulsions, which are so exboosting in their nature that the fatal result is likely to be in proportion to their frequency, beyond this we do not think these agents serve any specific purpose as antidotes. Bromide of potash, in large doses, is often given with the same end in view. In the treatment of poisoning by phosphorus we should have said to use sulphate of copper as an emetic freely. Oil of turpentine, to which you refer, is said to be very good, if old. Oils in general are bad, as they are solvents of phos phorus. In the treatment of arsenical poisoning the antidote hydrated sesqui oxide of iron can be extemporaneously prepared by adding aqua ammonia to dilute tincture of the chloride of iron.

Working Dogs on Rail. - We wish to express our hearty concurrence in the views expressed by "Homo" in our issi of last week on this subject.

We presume that all sportsmen who do much snipe shooting on the tidewater meadows of the Atlantic Coast have been annoyed by having their dogs point rails. These birds during the last of September and first of October are often extremely abundant on the meadows, and, as they give out a strong scent, attract a dog's notice at once. As rail refuse to rise until they are almost trodden on, they make the shooter a great deal of trouble, and confuse to the last degree a dog that is not accustomed to them.

We would never allow our dogs, especially if they are young, to stop ou rail; they can easily be broken from this tendency if taken in time.

A Lost Dog Restourd—Boston, Oct. 15.—Editor Forest and 8tream: 1 am happy to say that the notice of my dog having been stolen that you were kind enough to publish for me, has borne fruit, and I have recovered her. By good luck she lad within a few days falken into the hands of a Mr. Bruce, of Providence, R. L., a fellow sportsanan and a gentleman, who, on reading the notice of her description, recognized her and telegraphed to me at once. Why would not such notices form a leginate and a very useful source of income to your paper as advertisements? Everybody night not be as lucky as I have been, but if any dog, a sporting one especially, that had been stolen, were advertised by you, the chances of dog thieves selling their prey would be greatly lessened, and they might find the business less profitable.

We commend the wisdom of our correspondent's course in advertising his lost dog in the FOREST AND STREAM, and congratulate him upon the happy result. For the present we will gladly publish notices of lost sporting dogs free of charge.

Pope as a Canne Acthority—Washington, Oct. 11, 1880.

—Editor Forest and Stream: In the Forest and Stream of last week, reprinted from advance sheets of Vero Shaw's "Ilmstrated Book of the Dog," is the following: "In spite, however, of the numerous families into which the setter is now divided, there can be no doubt that the origin of each was the spaniel, and it is a curious subject for contemplation that Spain (as will be seen in the chapter on pointers) should have the credit of supplying us with three breeds of sporting degs—spaniels, setters and pointers—npon which we English so pride ourselves."

The use of the spaniel as a setting dog (ride Nicholas Cox) seems to have been understood by Pope. In his poem, "Windsor Forest," the following passage occurs:

"When milder automa numbers, best speceeds."

dusor Forest, the thorowing passage occurs:

"When nollder antunns numers' heat anceseds,
And in the new shorn field the partitige feeds,
Before his load the ready spanie bound,
Panting with hope, he tries the furrow'd grounds;
But when the tainted gales the game befray,
Cronched close he lies, and meditates the prey;
Secure they trust it' unfaitful held base!

"Till how'ring o'er them sweeps the swelling net."

This method of netting birds is still employed in England by the poachers, who use the setter, however, instead of the spaniel. Possibly Pope availed himself of the poetic license to secure rhythm rather than canine accuracy.

Libbir Water Spaniel Kennel.—Messrs Whitman & Olcott, with a desire to maintain the best kennel of Irish where
spaniels in this country, have purchased the noted dog Barney for their stock dog. Barney was said by J. S. Skidhore,
the celebrated breeder of this strain in England, to be the
best dog of the breed ever sent to America. This is a valuable addition to their already fine kennel, which contains
imported Bridget; her daughter Lady, of the noted Sibbad
blood; Barney IL, with a fine litter of puppies by Barney
out of Lady. A litter by Barney out of imported Bridget is
soon expected.

A Common Experience.—Granby, Conn., Oct. 18.—Editor Forest and Stream: The few times I advertised in the Forest and Stream: The few times I advertised in the Forest and Stream brought me in so many customers that I sold out everything I had to sell, and asked you to publish that I had sold all my dog pups, which you did. But that did not seem to do any good, for I had letters by the dozen since, and only a few days ago had calls for five dozs.

N. Elmore.

—Mr. Christopher H. Burrowes is the owner of a half bloodbound, which, to say the least, is quite sagacious. Last week his adopted daughter (to whom the dog had always been a pet) visited Palmer, and while she was there his boy took the dog our hunting on Wilbraham mountain. The dog disappeared and the lad, supposing he was lost, returned home, without him, trusting to the brute's instinct to guide him home. But instead of being lost he had made for Palmer, where he found his former mistress that evening. Instead of receiving him cordially, she whipped him and told him to go home, which he dutifully did, traveling all night and arriving in this city early the following morning, wel, and dripping from the heavy dew.—Springfield (Mass.) Homestead!

IMPORTED Dogs.—In the steamship Wilton, from West Hartlepool to New York, October 10, 1880, a grand pointer bitch, by Win. R. B. Summerson's champion Shot, and a Bedhington terrier puppy, by the champion Piper, were shipped for the Westminster Kennel Club. The pointer Polly is thoroughly broken and is a very handsome lemon and white. The Bedhington terrier is of the purest strain, with a pedigree through her sire Piper, and also through her dam, Nancy Lee, traceable back to the year 1792. These dogs were selected for the club by Mr. Hugh Dalziel.

EASTERN FIELD TRIAIS.—The Judges appointed for the field trials are Mr. James Gordon, of Pontotoc Co., Miss: Dr. Rawlins Young, of Corinth, Miss; Mr. R. J. Hewitt, of South Weatherfield, Conn.; Paymaster L. H. Billings, U. S. N., Annapolis, Md.; Mr. Von Lengerke, West Hoboken, N. J., and Pr. J. C. Monroe, Brooklyn, N. Y.

STEAVED OF STOLEN.—Dr. J. W. S. Arnold, 739 Lexington avenue, New York city, writes us that his cocker blich, Flora, liver and white, about six years old, has been spirited away from the above address. Any information concerning the dog will be appreciated by the owner.

ERIN AND BIDDY,—Mr. Tracy's painting of these famous Irish setters received the first prize, a bandsome gold medal, at the Art Exhibition recently held at St. Louis, Mo. Mr. Tracy has had the painting photographed, and copies of same can be had of Messrs. Schuyler and Duane, No. 188 Broadway, New York city. The picture is a very beautiful one, and is a companion to those of Faust and Bow, and Keswick and Jessamine.

NOTICE FROM MR. HOLLIS.—Hornellesville, N. Y., Oct. 19—Editor Forest and Stream: I have this day withdrawn the services of my cocker stud dog Wildair from the Hornell Cocker Kenuel Club, and henceforth all connounciations must be addressed to me for service in the future. BURR HOLLIS

NATIONAL AMERICAN KENNEL CLUB.—The annual meeting of this organization will be held in University Hall, Vincennes, Ind., on Monday evening, November 15, at 8 o'clock.

### KENNEL NOTES.

NAMES CLAIMED—North.—Mr. T. T. Phlegar claims the name of North for English hare beagle birch, whelped June 11, 1880, out of Latey by Victor. Yarrow.—Mrs. I. Lindsay, of Jersey City, claims the name of Yarrow for rough-coated Scotch colle yuppy, out of W. Lindsay's imported Queenie by champion flex. Winnig.—Mr. N. Elmore, of Granby, Cr., claims the name of Winnig for English hare beagle bitch puppy, out of J. N. Dodge's Belle by Hattler.

SALES -Belle II.—Mr. Fred H. London, of Rock Hill, S. C., has purchased bitch puppy black and tan, by Dr. Aten's Glen out of Belle, and claims for her the name of Belle II.

Belle, and caims for act the intend of Belle II.

PRESENTATION—Lucy-Victor Whelp.—Mr. N. Elmore, Granby,
Ct., hus presented to Mr. T. T. Phlegar, Pearisburg, Va., a fine
English half beagle blich puppy out of Lucy by Victor.

Wurntrss—Di.—Mr. Gratton's pointer bitch Di, Senastino-May,
whelped Oct. 9, 1830, nine pupples, four dogs and vice cyrpt, by
owner's white and black pointer dog Ned, Gratton's Jim-Wrisley,
Ned is litter borther to Mr. Howe's champion Rex. Det.—Mr.
Frank B. Fay's pug bitch Dot whelped Sept. 25, six pupples, three

dogs and three bitches, by his Druid. Tort.—Mr. Frank B. Fay's fox terrier bitch Tort whelped Sept. 27, three pupples, one dog and two bitches, by his Sam Patch.

BRED—Countess Gay-Coin.—Mr. Frank B. Fay's Countess Gay (Drake-Countess Vesla) to his Coin. Countess Mand-Coin.—Mr. Frank B. Fay's Countess Mand (Dash III-Opal) to his Coin.—Mr. His Coin.—Mr. Frank B. Fay's Juditi (Rob Roy-Belle) to his Coin. Belle-Robekt.—Mr. Orgill's Belle (Fishe-Lilly) to owners Rocket.

AMATEUR RIFLEMEN.

THE Board of Directors of the National Ride Association have I finally worked out their purpose on what they considered to be the stapendous evil of professionalism in rifle shooting. After all it seems that they have been examining the subject through the wrong end of the microscope, and have been nipping at what they considered a bud, but which was never anything but a minor affair, and one which had small likelihood of growing to any greater dimensions. Of course the resolutions hit where they were intended to, personally and particularly, but then the N. R. A. managers should recall that they are legislating for the whole country, and to impose even one additional rule into what should be the single code of rifle shooting is to be avoided by all means. We would recommend to all donors of prizes to the N. R. A., that the provision "open to all comers" be attached to all gifts. It is certain that the merits and claims of this, that and the other rifle will be conspic-nously and flauntingly pushed, all the resolves and definitions to the contrary notwithstanding.

The action of the Board was taken at a meeting held on Tuesday

week, when the following were adopted:

An Amateur Rifleman is one who has never entered into a competition for gate money, or who has never pursued match shooting with the rifle, kept a shooting gallery, or manufactured rifles as a means of livelihood, or who has never been paid by any manufac-turing firm or dealer in rifles, to use said weapons in matches for the purpose of advertising or selling them."

the purpose of advertising of seiling triem.
"Resolved, that on and after January 1, 1881, all matches of this
Association shall be open only to amateur ridemen as defined above, Association shall be open only a matter and archive specified, and excepting in matches open to teams representing regularly organized military or naval organizations; and amatuers only shall be allowed to serve, or to compete for places, upon any American Inter-state or International Rifle Teams to be organized by this association."

How the rule is to be applied in case of those professionals who are members of the National Guard does not appear. In matches thrown open to the National Guard, as the majority of them are, it will be a very risky thing for the N. R. A. officers to "go behind is will be a very lossy fining for the N. E. A. Doctors of go seemed the returns," as it were, and sit in judgment upon the qualifica-tions of guardsmen. Such a course might raise a serious conflict between the Creedmoor managers and some influential militia body. The following protest comes from a gentleman whose record as a

prize winner is second to none at Creedmoor:

NEW YORK, Oct. 16, 1880. Editor Forest and Stream:

Editor Forest that Stream:

The action of the Directors of the N. R. A. in dubbing certain members of the Association "professionals," and excluding them from the matches at Creedmoor, is questionable, if the motive that prompts the action is to benefit the art of rifle shooting. The gun firms and rifle gallerys have, 1 may say, been the making of at least two-thirds of the off-hand shorters that visit the range. How many men can be picked out from the off-hand clubs that can say they owe nothing of their knowledge of the art of ride shooting to the shooting galleries or gun men? Even the two or three gentlemen who are leading the N. R. A. Directors by the nose cannot dispute this point. And now to shut out these gun and gallery men from the matches, for fear they may win a few paltry prizes, shows the lack of judgment and of even the first business principles, which accessitates the advertisement by printed circulars to feam captains and others the fact that the directors are being led into error to please a certain few. No one will dispute but a long array of eash prizes, if properly advertised, will bring strangers to the range.

If the N. R. A. was a truly national association—that is, the directors elected by all the State associations—their resolution would have some weight with other associations; but their action first, and then advertising for information after, stamps the resolution as the reflex of certain members of one of the prominent clubs in New York City that at present have the ear of the executive.

### AN OLD RIFLEMAN SPEAKS.

Hupson, N. Y., October 4.

Editor Forest and Stream:

For the last two years my health has not been such as to allow me the use of my rifle successfully. But that doesn't debar me from reading your columns, and I do enjoy reading them as much

In looking over last number I again find that fault-finding and grumbling, in relation to off-hand shooting, is quite strong; and as more or less has been said about that graceful off-hand positiou, I thought I would give my views of it. The Shrewsbury Ridle Association accepts the rules and regulations of the Massachusetts Rifle Association, but objects to that fearful "elbow rest," and hopes to see it abolished. Now, it is really wonderful how some men will make themselves miserable while others are happy. They will never see this elbow shooting abolished. Their idea is no more popular than Dittmar powder at present. In Creedmoor's early days these arbitrary rules were more or less enforced, but they have ceased to exist, except in the minds of new begin and old eccentries. Men have come to the conclusion to let little matters drop and get the ball on the bull the best way they can, and keep within reasonable rules. I mean to be understood that I do not speak in self-defense, for my shooting is done in either position.

Now, I would really like to know what difference it makes to any one whether he gets beaten by Farrow's little elbow or Jackson's big extended arm. It don't help your shooting to handicap others.

To become a good shot you must practice, hold and pull steady, keep seasonable hours, let tobacco and lager alone, and mind your business at all times. If you want to establish a reputation for

yourself in rifle shooting, you must meddle with others, find fault yourself in rule shooling, you must meade with others, and naturating with everybody and overything that is done, but never with your-self. Then you may turn out a brilliant shot. And even then you may get beaten if you don't know coough to withdraw when you find your score is going to be low. Be very careful about going into team matches, because then you will have to shoot your score through. And if you have bad luck you may yet spoil your reputation, as it has been demonstrated this year in England, and also at Creedmoor in the inter-State long-range match.

Now, Mr. Editor, the above is good advice to badly-used riflemen.

I will now proceed to something else. I am informed that some find fault with Mr. Gerrish because he (G.) tied Partello's big score with ammunition that had been carried across the Atlantic and back. I don't think it fair for any one to grumble at that. Supposing Partollo's ammunition had been soaked in salt water, I doubt his making another point and making a full score. I think both gentlemen excellent shots, and never find fault with their

Mr. Gerrish has given valuable information of his fine shooting, and new beginners would do well to study all he says. But to me his letter is of little value. I am at the half-centre post, my eyes has letter as of little value. I show at the matterenter post, in yees are getting dim, and the bullsey at 1,000 yards don't look distinct any more. If Gerrish or any one else could tell me how I could bring out that bullseye once more jet black and distinct, he would do me and perhaps others a favor that would be appreciated.

L. Geiger.

Shooting with Glasses, -Philadelphia, Aug. 30, -Editor Forcet and Stream: I write you to see if you, or some of the numerous readers of your paper, can give the information I seek. I am very fond of hunting and anything that pertains to it, including shooting mark, but I'm what is termed near-sighted. I can't see plainly a bullseye the size of a Bland dollar at seventy-five yards distance. In order to remedy this defect I purchased a pair of eye-glasses, but, on trying them, found to my astonishment that they caused but, on frying them, found to my astonishment that they eaused me to short high. I got three other pairs of speciacles, and with the same result. I use a Winehester ribe, and at 50 or 125 yards distance, by aiming fair at the bullseye, the ball will average five inches above it in line. The ocults of whom I bought the glasses is unable to account for the displacement of the mark, or, I might say, the cause of the mirage. The only way I can see out of the difficulty is to get the rear sight lowered, but I don't care about doing so if I can avoid it, as it makes the opposite difficulty in shooting with the naked eye. If you or some of your readers can shooting with the naked eye. If you or some of your reads suggest some plan to remedy the trouble I will be thankful.

Bostov Mass October 16 .- The fall meeting closed to-day, after Boston, Mass., ortown to.—The far meeting closed forday, and a successful run, with a large number of spectators and ridemen. The morning opened with an overeast sky, producing a perfect light. The wind vacillated from north to south, and remained steady during the major part of the shooting at 6 o'clock south, of decided "fish-tail" character. In the afternoon slight showers mingled with the other changes; the smoke from the many rifles at short range assimilated with those of the long range, and hung to the ground, effecting good sighting for the long-range partici-The plan of the meeting was to have the individual matches run for the three days, and a great deal of firing was accordingly done. The following gives the scores made on this last day, and

### A POETICAL WAIL.

The Hyde-Halford fiasco, about which we have not been at all backward in echoing the opinion of every riflemen of prominence and the general feeling of the rifle world, has almost passed into a mere recollection. The indignation is simmering away as it comes to be understood that Englishmen gradually understand the situation. Up from the pleasant village of Flushing, on Long Island, where Hyde has a residence, comes to us the following effusion. Its pleasant irony is a relief after the bitter flings from the same source, and we print it as a pleasant finale to this unfortunate match:

THE MUG-HUNTERS' DETECTIVE.

"As finally made up, the Hyde team included Jackson, Laird, Scott, Brown, Hyde, Dudley, Gerrish and Rockwell. The 'representative American gentlemen,' as they were proud to style themselves, have become a more party of mug-hunters."—Editorial FOREST AND STREAM, July 29, 1830.

Forest AND STREAM, July 29, 1990.

Creedmoor "will be no place for mug-hunters, orthose who shoot for the ducats."—Bditorial Forest AND STREAM, Aug. 26, 1880.

Mentor of marksmen! Sporting sage!

We know it would be meet

That every rifleman should bring His trophies to thy feet.

Thou searcher into heart of man. Though young, so wondrous wis The hidden motive thou canst scan

Of each who seeks a prize, Avaunt! ye jugs, ye silver mugs,

Medallions gold and bright, Ye ducats roll, ye tempt the se

Heigh! presto! take your flight! Jackson, forbear! Scott, do not dare More than one prize to take !

Oh, Sumner, fly! Brown, do not try Too many "bulls" to make! Dread W-y sits, with boding glance,

Mug-hunter to descry. And who that wins would dare advance Beneath his scatching eve?

No miss your targets, burst your guns. Hit markers in the chin.

'Twere better far, the sage hath said, Than silver mugs to win.

# Archern.

HIGHLAND PARK, Ill., Oct. 11 .- Arrangements have been made for shooting three matches, each of 96 arrows at 60 yards, between the Oakland Bow Club of California and the Highland Park Archers. Each club shoots on its own range and reports scores by mail.

The following scores were made in the first match, Oct. 2:

HIMMIN	iu rark Ai			
N. F. Swartwout21-99	23-119	23 - 131	22-100	89-149
	23-109	24-114	22-106	59-412
Mr. Taylor	22 - 100	21-103	21- 91	81-371
C. G. Hammond 22-88	21-109	19— 89	20- 78	82-564

Highland Park won by 45-219.

### NEW YORK ARCHERY OT UP

HIS club has now been organized one year, and in order to celebrate the event the first annual full prize field meeting vas held at the Archery Lawn, in Central Park, Friday, Oct. 15. Everything combined to make the event one to be long remembered. The weather was delightful, enabling the spectators to enjoy sitting in the shade of the club's tents, from which point they could witness the shooting the entire length of the field. There were twenty targets placed at sixty yards apart and the gentlemen shot the usual American Round, while the ladies shot the Columbia

Everything passed off pleasantly, and the club, having prepared a good list of prizes for their visitors, made the occasion of more interest to those who came from a distance.

Invitations were sent to all the clubs in this vicinity, and repre

sentatives were present from the Brooklyn club, Nottingham Archers, Elizabeth: Toxophilite Club, Newark; Spuyten Duyvil Club; Riverside Archery Club, Chicago; Oritani Archers, Hackensack; Cedarwood Archers, Poughkeepsie, and Robin Hood Archers, Nyack.

Miss E. T. Morton, of the New York Club, made one of the best scores recorded in this country, at the Columbia Round—viz., 337. After the shooting was over, the president presented the prizes to the successful visitors, as follows:

Mrs. Gibbs, Toxophilite Club, Newark, scored 281, and won a royalwood express rawhide-backed bow; Miss Brandegee, Nottingham Club, Elizabeth, scored 266, and won half a dozen prize arrows; Mrs. Rutter, Toxophilite Club, scored 227, and received third, and Mrs. Dr. Bailey, of the Nottingham Club, took fourth and last prize, of an arm guard and tassel, with a score of 190.

The prizes for gentlemen visitors were distributed as follows: Mr. Nash, Brooklyn Club, prize lancewood bow, score 418; Mr. Pettinghaus, Brooklyn Club, half a dozen Granger's special arrows.

score 408; Mr. Hayden, Spuyten Duyvel Club, target and stand, score 393; E. L. Morse, Cedarwood Archers, score 381. In the evening the prizes worn by the club members were distributed, and the club enjoyed a re-union. Mr. Frazer took a spit bamboo bow, score 294; Dr. McLean, half-dozen Horsman's arrows, score, 274; Mr. Anten, lemonwood bow, score 258; Mr. Roper,

rows, score, 214; A17. Antent, remounded now, score 235; A17. Roper, half-dozen arrows, score 242; Dr. Elliof, Horsman's patent handle gem bow, score 242; Mr. French, two bow-strings, score 228; Mr. Pond, score 207, and Dr. DeLuna, tassel and score book, score 186. Miss Morton won the Columbia Badge, to be worn until lost, and also took a fancy table lamp with the score of 337; Mrs. Dr. DeLuna took rawhide-backed bow, score 230; Miss Howell took a beefwood bow, score 111; Miss Wren, half-dozen arrows, score 111; Mrs. Auten, half-dozen arrows, score 105; Mrs. Hill, pair of vases, score 102. The special prizes at 30 yards were won as follows:

Miss Manger, rawhide-backed bow, score 32; Miss Bailey, score ook and string, score 17. The annual meeting of the club will take place Wednesday, October 27, when new officers will be elected.

-We know Hop Bitters are above and beyond all as a nutritions tonic and curative.

### THE AUSTRALIAN CRICKETERS

FTER four months of severe work, which would have thorough-A FTER four months of severe work, which would have the constitution by incapacitated a less muscular team, the Australians have brought their second trip to England to a successful termination. It has been argued by some critics that their form during the last month was inferior to that shown during the earlier part of the stay, but it would be difficult to sustain this argument; and, indeed, when it is considered that the Colonials have not only been reduced to play without two of their very best all-round representa-tives, but on several occasions to bat with only ten men; and, further, when the amount of traveling they have done since the match at the Oval is taken into computation, it must be admitted that the show they have made in their later matches has only inthat the show have hade a hader along the constant of the cons worthy of note that until their twenty-seventh engagement at Scarborough against a local eighteen, when they lost by ninety runs and Spofforth unfortunately received an injury to his hand which incapacitated him for the rest of the tour, they had never been defeated. In some cases they had to meet strong eighteens, but of the twenty-six matches they were only defeated twice, at Scarborough and Spockport, and against these were victorious at Southampton, Longsight, Rochdale, Burnley, Malton, Belfast, Birming-ham, Northampton, Harrogate, Middlesborough, Oldham, Crystal Palace, Hunslet, Bradford, Sunderland and Yeadon, and drawn games at Keighley, Newcastle-on-Tyne, Broughton, Hull, Crewe, Hastings, Dublin and Glasgow. The eleven a-side matches were against Derbyshire, Yorkshire (2), Leicestershire, Gloucestershire, England, Sussex; Players (2), Notts and Gentlemen of Scotland and of these Derbyshire, Yorkshire (at Dewsbury), Gloucestershire, Players (at Crystal Palace), Leicestershire, and Gentlemen of Scotland were one; those against Yorkshire (at Huddersfield), Players (at Bradford), and Sussex, drawn; and those against England and The matches against odds have little real interest, but a few statistics regarding the chief members of the team and their performance will be useful. Murdoch, McDonnell, Groube and Palmer were the only four who took part in every one of the thirtyseven matches played; but, in addition, Boyle, Blackham and Bonseven materias player; out, in admining topes, blackmain and nonme were present in every cleven a-side match. In the latter Murdoch headed the batting average with 465 runs for nineteen innings
(over 25.15); McDonnell was second, with 418 for the same number
of imnings (over 22.4); and Doyle third, of those who played on
ground man Glies has no equal in this country, and his wickets are
spoken of far and wide as where cricket can be played.

every occasion, with 195 for fifteen innings (over 15). Bannerman owing to an injured hand, was unable to take part in several of the later contests, and he only figured in seven first-class matches, though his average (17.9) was a very creditable one. Groube, who had a great home reputation, and who was accredited with an extraordinary Colonial average, neither showed style nor effect to warrant any great belief in him, and his sixty-one against Yorkshire was his only score of any note. Blackham, toward the close of the tour, was also suffering from a bad hand, and this will to of the four, was also suffering from a fact haird, and this will to some extent account for the fact that, though in all matches be has an average of 16.33 with eleven a-side, he falls to 13.10 runs for eleven innings. Spefforth's accident prevented his appearance in unest of the principal engagements; and, consequently, in eleven a-side matches he only bowled 248 overs; taking forty-six wickets at an average of 8.28, while Palmer's eighty wickets were got at a cost of 11.14, and Boyle's thirty were for 15.31 ruins per wicket.

The tables appended give the batting and bowling averages of the

various members of the parties in all matches. Taking into account the immense amount of work that they have done it must be admitted that the form shown by this second Australian team has been exceedingly creditable. That they were able to beat the strength of England no one believed for a moment, but none the less the brilliant show they made at the Oval spoke very highly for their pluck, and were Spofforth able to help them they would have made a good fight at least at any time. Every one will be gratified that what fight at least at any time. Every one will be gratified that what threatened to be a rupture between English and Australian cricket was happily averted, and though the Colonials have even yet apparently failed to master some of the lessons necessary for a proper conduct of the game, it must be conceded that the general manage-ment of this trip was in every way superior to its predecessor. On Oct. 4 they dined with the Lord Mayor at the Mansion House and before eight o'clock on the following morning they left London for Brindisi, on their homeward journey. There is every chance, we understand, of another visit to England in 1882, and should some interestand, of sucher visit to England in 1882, and should some of the weak spots in the present team be filled by the substitution of men like Evans, of New South Wales; Massey, Horan and Garrett, the next lot will be sure to render a good account of them selves. By that time, too, perhaps cricket will have advanced sufficiently in the Colonies to permit the collection of an eleven able to play for their expenses only, if there should still exist the disinclination evinced by those who have already been over here to be regarded as professional cricketers. It is to their assumption of amateurism, accompanied with their exceeding keemness for moneymaking, that the Colonials owe the feeling that has been evinced against them in England.

W. L. Murdoch bowled in one match only -0 overs, 3 maidens, 13 runs, 1 wicket.

-One of the most remarkably inaccurate cricket sketches ever published appeared recently in the London Illustrated News, subject was the match between the English and Australian crick-eters. The artist was evidently totally unacquainted with the game, as the position of the fielders was absurd. One of the umpires was represented as standing between the wickets and almost all the men had their hands in their pockets,

-The mild autumnal weather has favored the cricketers in the East during the past month.

-Now that benefit matches are the rage it would be well for the St. Georges Club to remember that Giles should have his turn before the winter sets m

GILES' COMPLIMENTARY TESTIMONIAL.-George Giles has been tendered a complimentary testimonial subscription, and we trust that all those that remember the record of this excellent player and man during the past seven years will give the St. George's list a hearly indorsement. As a cricketer, although no chicken, he is cock of the heap this season, heading the club's batting averages.

... The Manhattan Cricket Club are to be congratulated in having secured the services of Arthur Smith, late professional of the Peninsular Club, of Detroit. In addition, the president, Mr. James Ponnsanar Citto, or betroit. In admitting the president, and sames White, or the M. C. C., pleased with the success and increase of the organization under his fostering care, has promised to engage at his private expense, a second professional to instruct the junior members of the club. At the annual meeting held on Oct. 12, the following officers were elected for the ensuing year: President Mr. James White; First Vice-President, Mr. Mackenzie; Second Vice-President, Mr. Matthews; Third Vice-President, Mr. Kerby Fourth Vice-President, Mr. North; Secretary, Mr. L. Love; Treas urer and Assistant Secretary, Mr. S. Hosford ; Committee, Mesers urer and Assistant Secretary, Mr. S. Hostord; Commutee, Messrs. Jackson and Jenkins; Match Committee, Messrs. White, Love, Hosford, Jenkins and Jackson. It was resolved that any member of the club who should play against his club, except in college, school or commercial elevens, should case to be a member. The Manhattans will close this season's play November 2.

-George Lane, professional of the Staten Island Club, will take his annual benefit on Saturday, the match being the Young Americas vs. Staten Islanders.

UNLAWFUL BATS-St. Louis, Sept. 10.-1 have lately been meas uring the bats of our cricket club, and I find they are all too wide. The laws of the Marylebone Cricket Club distinctly states that the width of the bat "shall not exceed four and one-quarter inches. have measured the width of a number of Corbett bats and every one was of excessive width; one Cobbett bat, "made expressly for an American dealer." is fully four and one-half inches in width, and very few of his bats fall below four and three-eighths. I do not wonder that the Cobbett has been a very popular bat: I wonder whose make will be most popular and for what reason. The impropriety of such bats being admitted is obvious. I venture to say that were the blades of any club challenged that not one of those intended for full-sized bats could be admitted to a match; some boys' bats could perhaps be found, but no mous' sizes. If some action is not taken by the cricket clubs and associations concerning the legal dimensions of the pods of bats, they will soon grow to be even wider than they are now. A player can have made for himself a bat that shall be six inches wide and play a defensive game simply, or compel his opponents to have their blades conform to the rule, for his bat would no more illegal"than one which is an eighth of an inch over width. Will you please call attention to this matter in your columns, and in so doing assist in making the game more uniform than is now the

[We take pleasure in publishing the above communication because we know the statement it contains to be a correct one. We have measured a number of bata recently, both in New York and Philadelphia, and found that many of them were much too wide. An extra quarter of an inch, whether on the end of a man's nose or added to the proscribed width of a cricket bat, is a matter for serious Let the American Association look into this, if it wishes to be considered a power in the land. Later on we may publish some remarkable facts, from which the cricketing public may draw their own deductions.

COLUMBUS VS. CINCINNATI.—These two clubs of the Buckeye State met at Columbus, Ohio, and played their first match of the season, on Sept. 18, which resulted in favor of the home organiza-CINCINNATI.

Two Celebrated Chicketers.—The White Star steamer Celtic, which arrived in this port on Friday last, had on board two of England's most famous cricketers, Messrs. R. D. and I. D Walker. On their arrival they went to the Brunswick Hotel, where they stopped until Tuesday. Before leaving New York we had a pleasant chat with the former, whom we found in his room suffering from a had attack of gout. Although this is the first visit of the brothers Walker to America, they were only prevented by sickness in 1872, from being members of the English visiting team of that year which came out under the captaincy of Mr. Fitzgerald. It will be remembered that E. Lubbock and Pickering at the last moment filled their places. The Messrs. Walker are on a tour

of pleasure with New Zealand as their destination. They will visit Niagara, Chicago, Salt Lake City, sailing from San Francisco in about two weeks time.

-Parents, do not use vile drugs or nostrums in your families, but use pure Hop Bitters.

THE SHUFELDT CUP.

Land inclosed a photograph of the "Shufeldt Cup," presented by Henry It. Shufeldt, Esq., Vice-Commodore Oconomowoe Yacht Charles of Commodore Oconomowo (National Commodore Oconomowo)

HENRY H. SHUFELDY, V. C. O. Y. C. September, 1880.

On the starboard side the following :

On the starboard side the following:

This Cup
Is to be Sailed for Monthly,
The Winning Yacht at each
Regatta
Shall faster to it a Silver Coin,
Engraved with name and date.
It shall become the property of the Yacht winning it for the
fifth time.

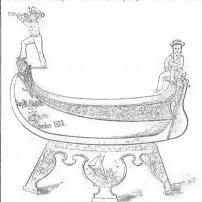

Along the side of the cup holes have been drilled to hang the

coins from.

The first regatta for the cup was sailed Sopt. 14. Yachts of tered: Buda, Sunbeam, Sortio, Magic and Annie, all of them sloop. The Buda, owned by Ferd. W. Peek, Ess., of Chicago, won, wi Sortie second, Magic third and Sunbeam fourth. The Buda Itol cup till the June Regatta of 1881.

W. B. E. S.

The yachtsmen of the lakes exhibit so much spirit in adopting all the various phases of racing that the stronghold the sport has taken in the West argues well for its rapid growth in the future.

Eastern men are hardly aware of the large number of clubs and the Eastern men are hardy sware or in earge mulmor or cross and the numerous races established during the past few years on the fresh water seas. In some respects we might profit by their example. Measurement by all three dimensions, mixed rig races, and above all, free entry for all comers, whether flying the club burgee or not; flying starts and valuable prizes are now predominent feetures of the sport in the West. The amount of cruising done in open water is more extensive than with us in proportion to the number of craft in commission, and is already exercising an influence upon the build of Western boats, and both cutter and yawl rig find favor in consequence.

### REGINA-FANITA.

REGINA-FANITA.

IT was unlucky that the match between these two sloops, sailed over the A. Y. C. course Oct. 15, should have come to naught on each of the fail. It was a mere matter of the the latter of the fail. It was a mere matter of the the all day, and the race was not even finished in the stipulated sight hours. There was not even fails were matter of the sail day, and the race was not even fails bed in the stipulated sight hours. There was not even a chance to compare the sailing of the craft with a view to drawing some sort of conclusions between the two. The match was governed by the rules of the Atlantic Y. C., with owners at the wheel, and mean length for measurement; the latter of course very much in favor of Fanita, giving her 3m. 12s. allowance, though on the more equitable basis of size they would have met on even terms. Virtually, then, Mr. Stewart was imposing a handicap upon his yacht of over 3m, without any just cause—a striking example of the falsey of length measurement. Had the race been close, within Fanita, though in common justice both would have belonged to Regina. In other words, while the former was receiving an allowance from the latter for her excess in length, Fanita was paying nothing for bringing to the line an excess of beam and depth. In this particular match Mr. Stewart may have had so much faith in his fine vessel that, in order to bring about a contest, he was willing to abide by the handicap imposed by a faulty rule; but had there been any wind, he might have had to pay dearly for so obligingly sceepting an Illogical and very mislending mode of measuring size. It is in races between yachts dosely mated as to performance and tomage that the false logic of the length standard is most and tomage that the false logic of the length standard is most and tomage that the false logic of the length standard is most and tomage that the false logic of the length standard is most and tomage that the false logic of the length standard is most and tomage that the false logic of the hengt

ceptive measure of size. Commodoro L. A. Fish and Messrs, J. L. Marcellus and E. A. Willard acted as judges for the day. Mr John G. Prague tooled Pauita, and Mr. W. A. W. Stewart the Hegina. The former measures 44ft. mean length, and the Hegina. The former measures 44ft. mean length, and the latter 48ft. Both had been put in the finest trim, and cam out in muslin from Sawver's famous loft. Fanita lad wiselenged to double head sail and lead ballast, but the change wa made so late that her best trim under the new "quasi-cutter" order of things could hardly have been fairly got, nor were crew and owner as familiar with the fine points of trimming the "two jibs" as the older hands aboard her rival. The course was from Bay Ridge, around southwest Spit and light-ship and home by the same course. Prize, a cup, value \$500. Then of race, eight hours. Mr. Stewart put his ship over the line of the side o

### A 'COON AS A SAILOR.

A "COON AS A SAILOR.

A WAY back in the early fifties the nondescript yacht Decoy, as also was then called from her peculiar shape, startled the old stereotyped fogies by her speed, stability and comfort. She was subscupently admited to be at least ten years in advance of her time. Her crew consisted of twelve young men, all of them increhants' clerks, their average weight being 125 pounds, slippery as eels, and when stripped for a boat-race showing the unmistakable signs of the gymnasium. To see them slip over to windward with a forty-pound sand-bag would have delighted a circus actor. Discipline and a never-failing consciousness of their ability added to the breeding of gentlemen made them real boat sailers. They were called "quill drivers," "tape measurers," by the old boaters of those days; yet how humiliating to old sailors to be always beaten by squirts. I had been told by a noted military man that gentlemen made the best solders, and I selected my crow from that element, beheving that the pride and spirit of a right meaning man gives him superior power in any condition of life. That I was correct was then demonstrated, that little crow. Most of them are still living, and some of them locat here. This is sure to meet their eye, as no one of them seemed to have forgotten their early training, or the hard pressure of business to have obliterated their taste for yaching. They are Fonest AND STREAM men, and somehow their sons take after them. Naturalists of the present day seem to think that instinct in the animal creation amounts to reason. One of the Decoy crew was a pet 'coon, raised from a baby in the boat-house, and he could talk, and intelligently too, as I will be a second to the surface of the present day seem to think that instinct in the animal creation amounts to reason. son. One of the Decoy crew was a pet 'coon, raised from a baby in the boat-house, and he could talk, and intelligently too, as I will

seem to think that there is a service of the Decoy crew was a pet 'coon, raised from a baby in the boat-house, and he could talk, and intelligently too, as I will show that he were saided eithout him, he was (as we term if here) "forward man." Often when the sea was heavy it would wash him from the deck into the boiling foam, but in an instant he was again at his post, and gave us all to under-tand by a peculiar guitural sound that he meant business. He delighted to sit on the end of the bow-sprit, and when we would cross a boat's bow, or take the wind out of her stall he talked. Sometimes a combing sea would chase him up the jibistay a foot or two, but he never failed to regain his old position. In moderate weather, and the water smooth, he would come aft, and looking at me knowingly, would mount the tiller, and, with one paw placed afrectionately on my arm, would sail the boat for miles. Then he did talk. He had been allowed the did talk. The had been allowed the did to the was badly hurt, and falling from the end of the bowsprit into the water, I picked him up as he drifted by. The ball had passed through his intestines. He was a sick coon, almost unto death. We ran into Gloucester were a surgeon, a friend of ours, carefully attended to his wound. How often he thanked that man for his kindness the God that has given hite to all only can tell, for he was then to weak to talk. We all loved him, and it was reciprocated. How our hearts warmed and throthed in sympathy for has water how weak to talk. We all loved him, and it was reciprocated. How our hearts warmed and throthed in sympathy for that innocent, unoffending atom of the great creation. He get well, but he never ventured out on the bowsprit any more. Quite aftermoons in the boat-louise he would climb up assess, and beriah the flies away until I snored, then be knew I was dead to all earthly things, and in a minute be would have my watch and money down to

### LIGHT DRAUGHT THEORIES.

Editor Forest and Stream:

I searce know which astonishes me most, the neat manner in which Mr. Clapham advertises his business in your columns or his apparent want of logic deduced from passing events. His style of boat, without he shapparent want of logic deduced from passing events. His style of boat, without he same plan, which apparent was present to the properties of the cold Ladery, littly-old feet long, was built by Fish on much the same plan, with a long stem. With wind free she was very fast, but to windward absolutely good for nothing, since on a sea, Lord help her! she would kincek your teeth out. I saw the Richmond go about off Fort Lafayette and make one tack up to Hoboken, where the race ended at that time: Lucky made six tacks to reach the same place and "Bob" Fish was at the tiller. Take the common run of builders—what does there experience always lead to? George Steers ended in the deep America; Fish in the Euchantress, with 16ft, draught; Rirby in the Arrow, with heavy bullast and heavy draught for that day. Even 28ft, sand-bag boats are nearly twice as deep as they used to be and carry more than twice the weight. I remember when twenty bags was a set of bullast for a 28ft, boat; then thirty was used; then Kirby used forty. Now fley use seventy and eighty, and I believe a boat light displacement. If we to to the the convenience of all as a general guide, it will be found to lead steadily to larger draft and displacement, easier form and saugger rig; and Fonest AND STREAD is doing nobly in advancing the cause of houset beats and classing machines where they belong. The snack which Ellsworth built at the same time Fanita was on the stocks, capsized not long ago in South Bay and her crew came near drowing. Doubtfull principles, indeed, to build yearbts on. I notice the Fatim has come out with double head sail, but both lead to the hounds instead of carrying the jib laff way up the masthead. The attempt at copying by men who would scout the lead of not being "practical," is hardly a success.

### HOW THE TIDE IS SETTING.

Editor Forest and Stream:

Let me say that though I first bought your paper some two years ago, as the one from which to procure reliable yachting news, and was not interested in any other kind of sport, yet in a very short time I ceased to put the paper away as soon as the yachting columns had been digically, and now rend it through from end to cad. From its Natural History items I have learned much that was new and very interesting, and from ifs account of sporting trips much of the nature of the different parts of this country that can be found mowhere less. As a devoted lover of a yacht, I have made in the found mowhere less. As a devoted lover of a yacht, I have made and accords to the hungey of his keel friends, then with thought myon the points so persistently made, and have finally graduated a deep-keel man in every sense of the word; and after this summer's experience, I want to thank you for your agency in up conversion. I sold my little yacht three years ago, and have since limited my boating to a cruise each year down the Chesapeake in a working stoop, chartered for the occasion. This year I horrified my yachting friends by hunting up the only small heel sloop in these waters, persistently hunder, and heel sloop in these waters, personal a good boat, and I tried her, in spite of the prediction that her keel would lay me up some time day for a prolonged stay on a mud bank. The channel of this river does not average more than three hundred yards in width for twenty miles from the city, and a boat drawing four feet of water was therefore in close quarters. I was not some three weeks, and her stiffness, ease in the city, and a load drawing four feet of water was therefore in close quarters. I was not some three weeks, and her stiffness, ease in the city, and a load crawing four feet of water was therefore in close quarters. I was not some three weeks, and her stiffness, ease in the city, and a load or a heavy sea, and the way in which she rode out a fearful storm in the lower flower of the production of

### A CAPSIZING RIG.

Eddor Forest and Stream:
Concerning my capsizable rig you noted in your last issue, let me add that I have fitted up my patent in the yacht Jane Hill, which was on exhibition for a number of drys at Frank Bates', at Short Banelb. She worked automateally and to perfection, is a great success in speed and safety. Many captains have saide her, and she is the admiration of all who have seen her at work.

JOHN MOLEOU.

### - 101 -VACHTING NEWS.

The Pacific Fleer.—An idea of the prevailing customs among Pacific yachtsmen can be gathered from the following details of the new sloop Stone has finished for Messrs, Buckingham and Wort Length of keel, 31/34t.; over all, 34t.; beam, 19/24t.; cabin, 11 by 54t., and 6tt. from floor to ecling. Forward of the main cabin is a state-room and galley. Longth of mast, 94t., main boom, 35tt.; gad, 12tt., and bowspril, 12tt. outward; from control-board, 5/2 by 6tt.

board, 8½ by 6ft.

INTRIPH,—This schooner, now cruising in European waters, habeen much admired by English critics, and her speed and weatherly qualities are extolled by all who have had a run in her from port to port on her recent trip to Scotch waters. Mr. Lloyd Phoenix has a long cruise in the Mediterranean in contemplation, for which the Interpel has been throughly overhauded in a Cowes yar.

trepad has been thoroughly overhauled in a Cowes yard.

Lasr of THE ANTHRACTHE.—The "eminent" Delaware shipbuilders
did not bite at the Ferkins boiler, and so Major Deane has returned
to England, leaving the agency in the bands of a New Haven man,
as we glean from an ungrammatical card in one of the smuller sheets.
The attempts to deceive the puble with the alburing bail of one
pound of coal per H. P. per hour have furned out a dead failure, to
the credit of American engineers Le it said.

pound of coar per in 1. F. per in a law unine one a tecan name; to the credit of American engineers be it said.

New Relies or run Boan.—An important question sometimes grises, be the rules indeed sury duty on a love-to vessel by night arises, be the rules indeed sury duty on a love-to vessel by night sidered by those in charge to be a vessel not nuder command, and therefore prescribed for in Article 5, viz., that she, as "not making any way through the water, shall not carry the side-lights?" A smillar question arises in regard to vessels becalmed.—Are they to exhibit their side-lights?

To avory approaching vessel the vessel becalmed is an overtaken ship, and as such is provided for, whatever be the direction of ap-proach; for which becalined the distinction between head and stern is seen to be approaching would be readily understood in this case, but a love-to ship ought to be otherwise distinguished.—Xvadical Maquatine, London.

Broomlay Yagart Clare,—The name of one B. S. Osbon has crooned

Magazine, London.

Brooden's Yacir Club,—The name of one B. S. Osbon has cropped out in print as a self-constituted "candidate" for the secretaryship of the Brooklyn Y. C. As a general election does not take place till January, the members have ample time to make inquiries of the polece courts of Bridgeport, Conn., and of the business community down town concerning the character of the man who proposes to use the fair name of the club as a handle to his own operations. Such impairies may also afford a clue to the declining popularity of the club.

A Yacur was "New Young to the second property of the club."

lons. Shell impartes may asso anoth a crue to the deciming popularity of the club.

A Yacht for Farace,—Mr. Verbrugghe, of Paris, is now in this city, about to have a 28ft, cabin sloop built for shipment to the river Scine, to race with the French boats, which have reached a very fair development for speed, both in hull and sails. Owing to the control of the statement of the st

CANDERS AS AN EXERCISE.—McGregor (Rob Roy) writes about canoning as compared to rowing in the following strain: "Canoning is maneasurably to be preterred to rowing. As it canoning is maneasurably to be preterred to rowing. As it canoning is maneasurably to be preterred to rowing. As it canoning is maneasurably to be preterred to the property of the canoning to the preterred to the property of the canoning to the spine on which fatygue tells, the one bone which supports the whole fabric: and it is precisely the spine which canonit be rested while rowing. What is the restful attitude of an oarsman? Covering over his oar—about as comfortless at kind of repose as you can imagine. In the canoe, on the contrary, one is perfectly at case all the while, and the low position in the boat gives numeries confort and power. Rowing, I grant, is swifter for a day or two, but it cannot be practiced on strange waters alone; and the sense of freedom depends on this independence of aid from a coxwain."

but it cannot be practiced on strange waters more and resease of freedom depends on this independence of aid from a consensit.

A GILMINE OF HEAVEN.—In a letter to the Toronto Mail, a correspondent who witnessed "regatat week" at Cowes, has this to say: "Well, you see where I am! Dear me, what yachting! It would make you leap into the Solent if you were here. I have been quite off my balance since my arrival—in a sort of a bewidered state of mistification with the whole roadstead manned with the finest yachts in Great Britain. And then the racing! In three days they have been during at it in superb skyle—these magnificent schooners's, cutters, and yawfs, with their immense spreads of canvas. You cannot fancy what a spread—spinankers, and every stitch they could possibly pale on. As you cross over from Sonthamption, the first thing that strikes the cyo is the club house of the Royal Yacht Squadron. It is, as you know, a castle; the building is of stone and not large, but pretry, and overgrown with iv, At the corner is a tower with no opening at the top. At one side is a pleasant little law.

The stratation is beautiful. In fact Cowes itself is a most delightful little place to a yachting man. Here you have yachting in all the

perfection to which it can be brought—suchting gure, yachting sublame, Almost every shop and building has something to do with yachtine, There is not a groce-building has something to do with yachting. There is not a groce-building has something to do with yachting. There is not a groce-building has sign up for supplying yachts. The island itself is most charming, Alter service on Sunday I took a walk to the westward, with a beautiful sea view all the time, then back to East Cowes, across the Medina, a, little river which runs between East and West Cowes. After landing, and having secured lodgings, I hurried back to the splanade in time to see the yachts returning to the winning buoy in the second day's race for £150, given for cutters and yaasis of 40 tons and upward. The Latona, a magnificent yaul of 163 tons, looked spleadid, bowling along with the wind abeam from the St. W. Then the Florinda, Sameona (the new Lyaington eutter), the old Arrows, and the Yandmara hast. The lat animud as a new Scotch people, as I heard every one dead against the r. Yacong the Cower yachting cuthadasan in England works up to fever heat, and even the people along the short sometimes get quife wild wild recitiment. In Scotland they run along the edge of the Clyde and cheer the competing yachts. A good pace of saling draws forth rounds of applance, while a mistake is marked with grouns, or if a competitor is unpopular, the spectators don't hesitate to left the unfortunate vessel know it. Next norming the harbor appeared even more full than ever of yachts (now a perfect forest of mast), and with the top of the tower of East Cowes castle and park to the right, and the shore of the maintain, four or ire miles opposite, made up a glorious picture. Again I hurried down to See the start or the cup for the competition of the marked with ground and the large was from the steamer's dock as they we had to fell in a group of the start of the start of the start of the start of the start of the start of the start of the start of the start of th

### PUBLISHER'S DEPARTMENT

-Another Discovery .- Prof. Swift, Astronomer of the Warner —ANOTHER DISCOVERY.—Prof. Switt, Astronomer of the Weffer Observatory, at Rochester, N. Y., discovered another large comet on the evening of October 10. The fact was noted in the associated press dispatches, but some important and interesting details which could not be telegraphed are herewith given. The new celestial visitor is in the Constellation of Pegasus, right ascension, 21 hours, 30 minutes, declination north 17 degrees, 80 minutes. Its rate of motion is slow, being in a northwesterly direction, so that it is ap-Its rate of proaching the sun. It has a very strong condensation on one side of the centre, in addition to a star-like nucleus, which indicates that it is throwing off an extended tail. From the fact of its extraor-dinary size we are warranted in presuming that it will be very brilliant, and the additional fact that it is coming almost directly toward the earth, gives promise that it will be one of the most retoward the earth, gives promise that it was beened in a most re-remarkable connets of the present century. This is the fifth comet which Prof. Swift has discovered, and the increased facilities which Mr. H. H. Warner, the popular and wealthy medicine man, has given him, by erecting a magnificent observatory for his benefit, promise much more for the future. There is a possibility that further developments may prove this to be the great conet of 1812, which is being constantly expected, in which event astronomers will have an unusual opportunity to test the spectroscope for the first time upon these eccentric bodies, and ascertain certainly what they are,

-Mr. B. O'Grady, cor. 123d st. and 1st ave., New York, has still on hand some of those choice Cocker Pups which were advertised in our issue of Sept. 9.

is well recommended by Tallucan, who broke him.

The Brankyrors Ritz-R.—We are of the opinion that the "Remington Keene" little can be fired rapidly with accuracy and effect; that as a magazine gun it is strong, simple, and can be readly comprehended by the ordinary men of the Naval Service.

It is well adapted for putting into the hands of inexperienced persons, owing to the improvements in the bolt mechanism, consisting of the hammer and can, the latter always bringing the piece at half eoch, thus looking the parts and preventing premature firing. The additional motion of ording the jeece, we believe, takes but little, if any, from the rapidity of the fire.

Respectfully submitted,

G. W. Collant, Capitain, U. S. N.

J. R. SELFRIDDE, Licut, U. S. N.

At present site seems to have a great weakness in her hind quarters. She is eight months old. Ans. Give one-eighth of a grain of nux vomica and two grains of quinine in a pill, three times a day. Keep her out in the open air. Give plenty of exercise.

J. L. V., Nashville, Tenn.-My bitch has running sores in both ears, and it seems to grow worse. They seem to be far back into the head. I can see some of the ulcers very plainly. What shall I do? Ans. Your dog has internal canker of the ear. See treatment

recommended "H. W. H." and "C. B. D." in Answers to Correspondents in Forest and Stream, Oct. 7, 1880.

F. H. L., Rock Hill .- 1. What can I give my three-months old puppy to produce an appetite? 2. How many inches at fore-shoulpuppy to produce an appetite? 2. How many incress as to resum-der ought my puppy to measure? Ans. 1. Exercise and good plain food, given at regular hours—presuming, of course, your dog is in health. 2. There is no standard by which the height of a growing dog can be regulated, any more than there is for a threeyear old child.

W. S. S., Cauton, Mass .- A few days ago I was shooting du from a boat with a friend, and had my pointer dog with me. We fired several times, and when we came off the pond my dog was tune deaf. Can anything be done for the dog? will probably regain his hearing—that is, if he had it when taken in the You neglect to state whether your dog was allowed to boat. retrieve or not. Pointers are apt to become deaf from exposure and cold

S. T. R. Circleville, O .- 1. Where can I obtain the best and purest strains of Blenheim and King Charles spaniels, and Maltese and Mexican lap dog? 2. What do you consider the best work on the dog, embracing natural history, breeding and training? Ans. 1. For the first three varieties you had better send to England; the "Mexican lap dog" we have never heard of. 2. Vero Shaw's "Hustrated Book of the Dog," published monthly by Cassell, Petter, Galpin & Co., 596 Broadway, New York City.

W. G., Medford, Mass.—I send you an insect that I found among ne feathers of a barred owl. While searching for more, one flew the feathers of a barred owl. from the breast feathers and struck my cheek like a No. 8 shot. Another flew away and could not be captured. Can you give me Another new away and count of be captured. Can by give include the name of it; also, some particulars? Ans. The insect which you send is the partridge fly (Offersia americana), of which so much has been written in our columns. We should be glad to give you particulars, but through lack of space must refer you to files

W. S., Waterbury, Conn.-I want to get a good gun, and want it mostly to shoot with in the Adirondack mountains-one that will it mostly to shoot with in the Adrondack modulatins—one that will kill a deer at a reasonable distance, and also be good for shooting around home. 1. What gauge, length of barrels, weight, etc., would you advise? 2. Is the shooting quality of a \$75 gun any better than those of a \$60 one, or is the difference of price in the finish of the gun? Ans. 1. We would recommend for general shooting a 10-gauge, 8 to 9 lb. gun, with 30-inch barrels. 2. The two may differ only in finish.

M. H. B., Passaic, N. J.-Will you please inform me what is the best food for dogs two weeks preparatory and during the shooting season, to give them good, solid endurance? Also, whether crackseason, to give them good, solid endurancer area, whereas every every steamed and mixed with table scraps is good for reginar food? Is it a good plan to put emders in the kennel yard to barden the dogs feet? In my inquiry I wish to except prepared food. Ans. Mush cooked hard is better than crackers to mix with table scraps. A dog being worked requires meat, and he should have larger feeds than when lying idle. Regular exercise is necessary for both man and dog before taking the field. The cinders are very good, if not sharp enough to cut the dogs' feet.

Anxious, Baltimore,-Always unstep mast and unship bowsprit if possible. White lead both, trice up in loft for their whole length or lay on a floor, so that they will not lose shape. Protect partners, steps, etc., from weather. Stow sails away, after thoroughly drying, where rats will not get at them. Take out ballast, clean and whitewash hold. Block up clear of mud, protect all hardwood and deck fittings, and cover sunny side with burlap or matting, allowing for free circulation of air. Shore up well all around, and under counter, if long. Tally all gear and blocks. Slush all iron work, pins, etc., to preserve from rust, and lime down all bright wood. Finally, visit often during the winter, and give an airing; sweep off snow, if not under cover; allow no leaks, if the seams

A. D. E., Irvington, N. Y .- 1. What is the size of the 200 vard range target at Creedmoor? 2. Is the plover a species of snipe? 3. Is it shot on wet, marshy meadows? 4. Do you think it would be

safe for me to purchase a broken setter at the auction sale of dogs sair for me to purchase a broken series at the action across toos advertised in your columns, i. e.; "Hitchcock & Hellyar's keunel draft, to be sold Oct, 27? b. Is the duck shooting on Long Island good now? 6. Do they shoot them from batteries? Ans. 1. All distances up to and including 300 yds.—bullseye, circular, 8 in. diam.; centre, 26 in. diam.; inner 46 in. diam. 2. It belongs to the spine family 3 Some species are shot on wet meadows, others on the upland and others on both. 4. We cannot recommend you either way. Some of the dogs to be sold are extremely good ones, but about others we know nothing. 5. Better later. 6. See game

NIANTIC. Niantic, Conn.—Having for some years been an attentive and interested reader of the Forest and Stream, I will take the liberty of asking you a few questions. When I first came up here striped bass were plenty, but, owing to a multitude of nets set by Long Island fishermen, they are yearly growing scarcer.

Among the native fishermen but little can be done, but if one only knew how to set about it, perhaps our sport with rod and reel would not be entirely abolished. I therefore throw myself on your generosity, and ask for advice. A few good fish have been caught from the toll bridge, but so few and far between that it is rather discouraging business. I would also like to know why the tish take live bait up here when about New York waters shedder crab and lobster seem to be their favorite diet? I have heard many discussions on this subject, but desire some authentic information. Ans. We hardly know what advice to give you in reply to your first question, as you do not say whether the law allows such nots or not. The fish probably take shedder crab about New York in pre-ference to live bart, because that is the food they are seeking; but when they reach your place they find more live food, and so take are accustomed to or learn by practice what food is in store for them.

THE MANUFACTURERS OF THE "FOX" GUN, FEELING THAT DEALERS, as a general thing, have not done justice to the merits of this WONDERFUL. GUN, are decremined to have them placed before sportsmen more generally, that they great merits may be one better known and appreciated. It is needless to speak of THE ELEGANT WORKMANSHIP AND WONDERFUL SHOOTING POWERS of these guns. It is a fact well established that they are UNSURPASSED BY ANY IN THE WORLD.

THE ELEGANT Workship and the stabilished that they are UNSURPASSED BY ANY IN THE WORLD.

We propose for a limited period to offer a line of these gnus at the following EXTREMELY LOW PRICES, after which the original prices will be restored, our object being to introduce the gnus into sections of the country where dealers have failed to present them; in the firm belief that where they become known they will be the established favorite, and we shall reap the benefit in future of this great sacrifice.

Such Inducements Have Never Before Been Offered. Sportsmen wishing to purchase one of these beautiful guns must respond at once, as the number offered at these prices is limited.

Answers to Correspondents.... 

#### FOREST AND STREAM.

NEW YORK, THURSDAY, OCTOBER 28, 1880.

\*\* The Forest and Stream goes to press Wednesdays. Correspondents are requested to mail their communications that they may reach us before that day.

A BOOK FOR EVERY SPORTSMAN. - We cannot too highly commend to the attention of all those readers of this paper, who (or "which," if you please) have no thorough knowledge of explosive compounds, the purchase and reading of Prof. J. P. Cooke's "The New Chemistry," (Appleton & Co., New York, \$2; or sent post-paid by us for the same price). We happen to know that many of our subscribers, among them the Fire Marshal of the city of New York, have upon our former recommendation, read the book with interest and profit. It is an admirably clear presentation of principles with which every man who uses a gun should be familiar.

PROF. MAYER'S EXPERIMENTS.—We take much pleasure in publishing to-day the first and only correct report of Professor Mayer's experiments to determine the volocity of shot. A garbled report was published by a Boston paper, and has been extensively copied, absurd typographical blunders and all, and many criticisms have been offered respecting statements that Prof. Mayer was alleged to have made, when in reality he had never said anything of the kind. The Forest AND STERIM has received the article directly from its author's own hands, and the proofs have been submitted to him.

We need not dwell upon the practical value of these experiments, nor to the thoroughly able manner in which they were conducted. The article deserves and will receive careful study

-The number of correspondents who contributed to our columns last week, including, also, those whose inquiries were answered, aggregated a total of more than 120, and represented twenty-six different States and Territories.

THEY FAIL TO BEPLY THERE was received at this office, September 29, the following communication;

New York, Sept. 29, 1880. To the Editor of Forest and Stream:

Your article in the last number of your paper has been called to our attention, and upon persung it, we find that you propose in your issue of this week to publish a further exhibit of matter of alleged affiliation, as a sequel to the interesting contribution to the literature concerning the Dittmar Sporting powder, which appeared in your issue above quoted.

We suppose that a sense of insecurity impelled you to intimate in

the article that the columns of your paper, which theretofore (as you say) were open to us for explanations, would be henceforward closed, but being nevertheless convinced that, notwithstanding your enmity to our company, for reasons which we shall at length here-after explain, you will not defy public opinion by permitting an invention of great public utility to be libelled and defamed in your issue, without giving us an opportunity to reply,

We shall reserve our answer to both your article and to Mr. Squires' lctter, until the full extent of your charges are made known as cromised. We desire however in order to avoid all misconceptions to unqualifiedly deny in advance of our extended answer, each and every statement in substance made in the article above referred to derogatory to the Dittmar Sporting powder.

Very respectfully yours

DITTMAR POWDER MEG. Co.

This letter could be only one of two things. It was either what it purported to be, a notice given us in good faith by the Dittmar Powder Manufacturing Company (No. 2) that they had a genuine extended reply which they were really about to send 'to us, or else, having no such reply and being in desperate straits, they put forth this flat denial hoping that it might produce whatever effect attaches to bravado and bluff.

We accepted the more charitable of the two admissible constructions; and awaited the promised reply.

The occasion certainly called for an immediate and explicit answer from the manufacturers of the "Dittmar Sporting The "full extent of our charges" respecting that compound, as published September 23 and supplemented the week following by "a further exhibit" of most decided and unmistakable "affiliation," were of the gravest possible nature. They directly affected the public estimation of the powder, and unless contradicted at once, must, as the event has proved, seriously injure the sale of that product. The business interests of the Dittmar company were at stake. To preserve those interests a satisfactory and immediate reply was imperatively demanded. Under such circumstances it is incredible that, if anything could be adduced by them to disprove or offset our statements, it should be withheld from the public a single day.

We have waited five weeks. The "extended answer" has

Instead of furnishing within this time any reply at all, the Dittmar Powder Manufacturing Company (No. 2) have, at so late a date as October 22, published their letter of September 29, prefacing it in a New York paper with the remarkable explanation that it had been sent to

the Editor of Forest and Stream as a preliminary answer to the hodge-podge literature on Dittmar powder published in their columns, which is the outgrowth of spite, revenge and ignorance, and intended to scare all those readers which  $^*$  [sic] have no thorough knowledge of different explosive compounds.

We submit that a full month was sufficient time for a more adequate answer to "the hodge-podge literature" which "the outgrowth of ignorance."

With the exception of this exhibition of pitiable bravado, the Dittmar Powder Manufacturing Company (No. 2) have given to the public not one single syllable of reply to the facts and logic presented by the Forest and Stream. Their silence can be construed only as the unwilling confession that they have absolutely nothing to say.

The letter of September 29, we are forced to conclude, was not sent to us in good faith as a notice of a forthcoming explicit reply. It was bluff.

As such, it was a fitting sequel to the long story of previous

\* Each of these communications contains the best of internal ovidence to conclusively prove that it was written in haste, if not in a passion. Upon no other theory can we account for a failure to emerge from the mazes of the second sentence of the Sept. 29 letter; nor for the extraordinary use here of the neuter pronoun.

denial and evasion already recounted by us, and as such it certainly calls for no extended consideration here.

We do not wish to prolong the discussion of the "Dittmar Sporting Powder;" the Forest and Stream is not warranted in taxing the patience of its readers by dwelling upon dead issues.

In closing the subject we submit the following propositions made with all possible brevity and clearness :

- 1. The question of the safety of the nitro-cellulose explosive compound styled "Dittmar Sporting Powder," is one which directly concerns the life of every man who may be induced by the representations of its manufacturers to use it. That each man so concerned may draw his own conclusions it is necessary that he should have the facts in the case, and all the
- 2. The Forest and Stream has presented the facts. The public, from Maine to Mexico, has from these facts drawn its conclusions. The evidence has been submitted. The verdict has been passed.
- 3. Wholesale denials, unsupported by facts, cannot alter that verdict.
- 4. One of "the statements in substance \* \* derogatory to the Dittmar Sporting Powder," was that of Mr. Carl Dittmar himself, and was made under oath. Something more than the unqualified denial of the Dittmar Powder Manufacturing Company (No. 2) will be required to induce the public to believe that Mr. Carl Dittmar under oath perjured himself.
- 5. We did not say, nor intimate, that our columns would be henceforward closed to reasonable explanations from the Dittmar company. We reserve the right at all times to decide what shall, and what shall not be printed in the For-EST AND STREAM, and we will never knowingly permit anything to appear in these columns which is intended to deceive our readers or to conceal from them the truth.
- 6. The editor of this paper has never had the slightest acquaintance, good, bad nor indifferent, with any one of the present manufacturers of the "Dittmar Sporting Powder." In writing and publishing the articles on the powder he distinctly disclaims having been influenced by any other motive than a determined resolution to get to the bottom of the subject, and then to publish the truth, fully, clearly and without fear. The charge that any one of these articles, or any single sentence in them, was inspired by "enmity" is ridiculously and maliciously false.
- 7. If an invention has been libelled and the libel can be proved there are certain well-recognized and approved courses of action whereby redress may be had for injury sustained.

Good Words in Harper's.—The November Harper's contains a very readable along-the-shore article, entitled "Saline Types," which treats of people and things about which little is known by the general reader. It winds up with a few telling sentences on the rapid destruction and driving away of the water-fowl of the south shore of Long Island, and urges that steps be taken to protect these birds. The importance of some such action is becoming each your more pressing, and thoughtful sportsmen should turn their attention to this subject before it is too late.

In a revision of the New York game laws, such as is proposed by Mr. Crook, provisions protecting ducks and geese on their feeding-grounds and limiting the shooting to certain days of the week would, we think, receive the approval of most far-seeing men. Harper's says:

All along the Atlantic Coast the modern sportsman has intro duced vicious methods. He is rather a persecutor than a hunter of wild fowl. His decoys lure the bird by day, and they are used to such an extent that the duck and wild goose with difficulty tind a "sanctuary." At night the persecutor pursues his illegitimate sport under cover of darkness. "Blinds" also are resorted to in the daylight. In consequence of this devastation (in defiance of the game laws) the wild fowl is fast disappearing.

A WORD TO OUR READERS .- Every reader of the Forest AND STREAM is requested to send us the names and adresses of such of his friends as are interested in field sports, but who are not among our subscribers. To all such we will send free specimen copies.

THE GAME LAW .- We hope that all who are interested in the New York Game Law will give the digest published in our columns last week their immediate attention, and communicate any suggestions they may have to offer to Mr. Crook

### The Sportsman Tourist.

A TRAMP AFTER TROUT IN COLORADO.

A TRAMP AFTER TROUT IN COLORADO.

The Doctor was in eamp in Estabrook Park on the Denver and South Park Railroad, which, at prosent, runs from Denver to Leadville. The small station-house is lifty-two miles west of Denver and stands near the north fork of the Platte. The north fork and the south fork of the Platte form a junction with each other ten miles below Estabrook, at a station called Buffalo, constituting quite a mountain stream, which, after dashing headdong over and around immense boulders, forming many charming pools and foaming cascades, and forcing its way for ten miles through the picturesque canno of the Platte, emerges upon the plain thirty miles above Denver and, after flowing northward and irrigating the numerous ranches or route, furnishes water to that thriving, bustling, heautiful young city. The Denver and South Park milroad follows the banks of the Platte to its source, taking up the north fork after reaching the junction. The secnery through which it passes, especially from the point where it enters the mountains to Estabrook Park, is perhaps equal in beauty and interest to any of the far-funct secnery of Colondo. The Platte canon is decidedly attractive. The only drawback to a delight ful ride through it is the fact that the road, following the various and often sudden crooks and turns of the river, keep the cars continually on the swing, and fully one-half of the passengers, especially on the downward trip, get seasiek. In many places the mountains come down abruptly to the very brink of the river and the road bed has been blasted out of the solid rock, Half of the time it appears that the road terminated within a hundred yards both behind and before you, so very crooked and merow is the gorge.

One Soutday norming carly in Angust last the Radian and I boarded the regular train for Leadville, taking with us the five-ran of the regular train for Leadville, taking with us the five-ran day and the regular train for Leadville, taking with us the five-ran day and the regular train for Leadv

there after the train romes in and fix a place to sleep before night. What do you say to it but promise to join them at the appointed time? So, after receiving a few small commissions to fill, such as buying a few files, some canned goods and laying in a supply of worms (the latter of which can be had in all Colorado only in Denver), the Madam, the five-year old and Honarded the down train at seven o'clock and were soon turning and twisting and grinding our way down the fortuous road, and before we reached the plain two-thirds of the passengers were sick. The Madam had taken charge of the five-year-old, who soon startled us with the remark, "Ma, my head feels so funny." and directly afterward found relief in slumber. It was not long thereafter when the Madam hards who stricken. Turning to me with a look with which I became haviliar in a rough ocean voyage not a thousand years ago, she said, rather sorrowfully, looking down at the little sleeper, "You'll have to take her. But raise the window first. I'm so sick!" None of the sick ones found relief till we got out upon the level plain and sped away smoothly and rapidly for Denver, which we reached at half past past ten that high.

At noon on the appointed day I strpped off the train at Estabrook Park and was greeted by the smiling face of the Doctor. "We are all ready," said he, while shaking me cordially by the hand. "Over yonder by that slab-house you will find Mr. Higginson waiting for you with his wagon. Mr. Holme and his brother have gone on in the dog eart, and the Dean and I will ride horseback." On my way over to the slab-house I fell in with the Dean, who had been somewhere down in southern Colorado attending to the interests of his Church and who had come up from Denver on the same train with me. Higginson and I were urged to lunch with him before starting on our journey, an invitation quite acceptable to me, as my appetite was afready beginning to get the better of me. What they termed lunch proved a real good dinner. As soon as it was dispatched we pa

tainly comfortably situated, but not greatly troubled with neighbors or visitors. After a slight rest, and partaking of a goodly supply of ice-cold fresh buttermilk, we contigued our journey five miles further to Mr. Webster's runch, where both road and civilization terminated. It was then five o'clock. After unloading our traps, Higginson returned to his home. Webster unloading our traps, Higginson returned to his home. Webster unloading our traps, Higginson returned to his home. Of the house and did the cooking, were at home. Webster offered us shelter for ourselves and grazing for our animals, advising our remaining with him over night, saying there was no special trail over to Goose Creek, and that we might not find it alone, but that if we would defer our journey till morning he would escort us part of the way. He said the distance was five or six miles. So we voied to stay there all night and make an early start in the morning. After broiling our meat and making some coffee on the stove, and chatting with Webster till far into the night on the chances, among other things, of the success of our expedition—of which he was by no means sanguine—we all piled down on the floor, and soon fell askep. Twoof our host's herdsmental come in after a long trapp "rounding up" cuttle, each bringing with him a large supply of blankets and buffalo robes packed on horses, separate from those they rode, and this bedding they turned over to us, which, added to our own stock, made the night on the floor fairly comfortable. The Dean found the naked McCleel lan saddle rather hard for a pillow, but a pair of nex, soft tainly comfortably situated, but not greatly troubled with

to us, which, added to our own stock, made the night on the floor fairly comfortable. The Dean found the naked McClellan saddle rather hard for a pillow, but a pair of new, soft overalls, belonging to one of the herdsmen, when rolled up, served my purpose admirably.

We were up betines next morning, and got our simple breakfast. The Dean and I started out afoot and in advance. He carried a carbine in the hope of seeing a deer, but came no nearer a shot than seeing some fresh tracks. Such a walker! He kept me at the top of my speed all the time, my wind about exhausted, and the perspiration rolling off me. When I would beseech him to moderate his gait, he would declare he thought he was walking very slowly. I had seen Englishmen trudging up and down the mountains of Switzerland, and was aware they were good on foot, but I had never had such men trudging up and down the modultans of switzerland, and was aware they were good on foot, but I had never had such a realizing sense of it before. The horsemen soon overtook us, accompanied by Mr. Webster. We went down this gulch and up that one, crossed spurs of mountains here and there, until, a mile and a half out, we came to a great ridge over-looking a vast stretch of mountain ranges beyond, with Pike's

iss, accompanied by Mr. Webster. We went down this gulch and up that one, crossed spurs of mountain ranges beyond, with Pike's Peak sixty miles south of us, but really appearing ten or twelve miles at farthest.

"We will stop here," said Webster, "and I can point out the way. Make for those naked bluffs you see youder. That dark line you see below us is Wigwam Creek. This valley to the left leads to it, and you cross it. After crossing, bear off to your left at an angle of about twenty degrees, and go upon the ridge; follow the ridge, and you will stone to the head of Sand Gulch; turn to your right and go down that about half a mile, and you will stike a beaver dam on Goose Creek about half a mile and you will stike a beaver dam on Goose Creek about half a mile from its mouth. But—"

"Hold on, Mr. Webster," cried the Doctor, who had been so enchanted with the panorama spread out before us that he had not heard a word of the directions, "yo over that again, so we may all understand it. We don't want to go meandering about these mountains and get lost."

And Webster curefully detailed the route, so it was plain to all of us, and then bid us good norming. We had no trouble in following his directions, but found the distance at least eight miles instead of six. We reached Goose Creek at half-past eight o'clock, and the first signs of life, save an occasional grasshopper, that greefed our vision were some king-fishers fithing up and down the little stream.

"They are here! There are here?" I exclaimed, overjoyed that the iresome journey was ended, and feeling sure these birds would not be about unless fish were present.

By nine o'clock we had the horses picketed out on the grass in the narrow valley, and were trying our hands with the trout. The bean and the elder Mr. Holme were both expert fishermen, and turned up their noses at worms. They used all flies, of course. The Doctor and I compromised by putting worms on the lower hook and a brown hackle or other dark ity above. We all starred down stream, the dider Hol

to prepare camp for the night, and bringing with us, as the result of the afternoon's work, 144 trout. We were all very to prepare camp for the night, and bringing with us, as the result of the afternoon's work, 144 trout. We were all very tired. The work was the hardest, and nothing but its excitement kept us on foot. The banks of the creek were precipitous, often with great boulders as large as a house, and as none of us had wading boots, we were frequently compelled to leave the stream and make our way along the rugged mountain side in order to reach it in another place. That night we made our bed down on the sand, under a big plac, with a roaring fire at our feet, which was kept going by Holme, who, sleeping on the outskirts, got cold every hour, and was compelled to get up and thaw out over the fire.

The next morning Holme, the inexpert fisherman, started alone at five o'clock to make the railroad at moon to meet some friends on route for Leadville. We filled him before he started with a nice hot breakfast, loaded his horse down with two big baskets of trout, and gave him our benediction. Som after this the others were devoting their attention to the trout. This attention was continued fill near nine o'clock, when we all returned to camp to prepare for the return trip, bringing in

This attention was continued in near min or coocs, when we all returned to samp to prepare for the return trip, bringing in this time 103 from. The entire lime devoted to fishing was a little over the rime hours, the total result being 355 from. Of these the writer led with 97, followed by the Doctor. I am certain the writer led with 97, followed by the Doctor. I am certain the Boctor and I would have done better if toward to certain that the Doctor and I would have done better it toward the close our worms had not given out and driven us to rely solely upon llies. During the use of worms we captured one trout with the fly to about seven or eight with the hook baired with the worm. It was an unprofessional way of fishing, but these silly mountain fish seemed to like it, and we were dis-posed to humor them.

As I had to foot it back to Webster's, and the Dean was too much for me on an even race. I concluded to start ahead, and go it alone and take my time. I had marked my bearings pretty closely the day before, and felt I could make it. I did well enough up the Sand Gulch and along the ridge, but I lost the turning-off place to go down through the pines to Wigwam Creek, and became confused over certain peaks I had marked in my mind the day before. I had gone so far I was fearful the horsemen behind me would not pass that way, and I made for the creek at a venture. I struck it in a strange and wild looking place, without anything to indicate whether I was above or below the crossing of the day before, which I had marked by thoroughly blazing with a batchet a young aspen tree. I wasked up the bank of the creek where walking was specially had half a mile, and finding the country growing wilder, reinaced my steps and went down, growing hore nervous and uneasy every moment. I was without a cost and without matches, and feared a night in the mountains. Once or twice I caught myself nearly in a run. But finally I saw the blazed tree, though it looked like some other tree, and I could barely believe my own marks. But here were the prints of the horses feet at the crossing, and I plunged over, and from that on I stuck to the fresh tracks like an Indian. I was particular to step right in them, and I would not deviate from them two feet, even to cut across a sharp turn. Even when I reached the branch that I knew flowed by Webster's house I could not feel sure of it, and the sight of his house across the green pasture, as I emerged from the pines, was extrainly very grafilying to use. I got in an hour ahead of the rest of the party, about exhausted. When they can, the proper was low. At Higginson's we took on some more butternilk and borrowed another horse. From that on to the railreap were thying, arriving at dark and finding a nice warm supper waiting us at Mr. Holme's tent, presided over by his accomplished daughter.

I thi

### PANAMA-"THE PLACE OF MANY FISH "

If I have not been misinformed, the old Indian word Pana-ma means "The Place of Many Fish," and for once an appropriate name has been given. Had it embraced the word "educated" perhaps it would have been better, for of all fish Panamanians are by far the best calculated to make a man curso education in the abstract. Of course there are the

man curse education in the abstract. Of course there are the usual exceptions.

Fancy, if you please, casting your well-haited hook in the midst of a dozen or so of magnificent corhenoes, averaging ten pounds each, with half a dozen skip-jacks of good size loitering about on the outside, and witness the manner in which they receive your attentions. In the first place they will dart at the hook in a manner to make your heart jump, but as they appear just ready to strike, a slight movement of the tail swerves them aside, when they lazily examine and investigate; then they quietly sail in a circle around the bait, until they feel the line touch their backs, and then it is good morning to corbenoes. You may coax and play sweet on them, but they graduated some time before you came into the country.

morning to corneces. For may cota and pany sweet on them, but they graduated some time before you came into the country.

And what a beautiful fish they are! as red as a goldfish, or dark brown, according whether they be the red or black variety, and several inches across—in fact, they frequently appear disproportionately broad. When served on the table the firsh is white, and as solid as a Columbia River salmon.

With skip-jacks you can enter the plea of "sour grapes," for they are scarcely worth the trouble of eatching, as they are only good for chowder. Should you want fun you would get plenty, providing, of course, you hooked one, for they make a hard fight and are game to the last. Both the corbeno and skip-jack are game fish, and as ravenous as our Xorthern bluefish.

The natives are generally too tired to fish, although big prices are obtained in the market for all kinds, I witnessed a singular scene not long since. For some time I had noticed a boat cruising about in the harbor, which finally stop-ped, and while one man attended to holding it steady by means of the puddle, the other was basily engaged in throwing out something from a bucket. Som the mystery was explained,

tieed a boat cruising about in the harbor, which finally stopped, and while one man attended to holding it steady by means of the paddle, the other was busily engaged in throwing out something from a bucket. Soon the mystery was explained, He was making a "slick," as the Enstern bluefshermen say; and after a little I saw enough commotion about his boat to satisfy me the fish had risen. Carefully he rose to an erect position and poised a harpoon, the while intently watching the water just off his port bow. Suddenly he let loose, and as suddenly went, reverse side up, into the hotton of the boat, which boat began a series of gyrations through the water, first to the right, then to the left and finally in a circle, gradually nearling the vessed on which I stoudily in a circle, gradually nearling the vessed on which I stoudiling his boat. The native who sat in the stern with the paddle had just all he cared to contract for to come in on the short turns, and the way that boat walked through the water was an interesting lesson to steam yachts. After traveling about the bay for about ten minutes, the line was bauled short, and the death stroke given with a lance, and as handsom a corbenowas handed into the boat as I ever saw. He must have weighed nearly forty pounds. I did not suppose they grew to such a size, but was assured that even larger ones had been captured. The harpoon used was a two-pronced barbed instrument, the wooden handle fitting into an iron socket, and just at the socket the line was attached to the iron. When the blow was delivered the handle became detached and floated away, the line leading directly to the fish. This sish was struck immediately behind the pectoral fins, which is the objective point, I believe.

We are lying about two miles off shore to-night, and just now, while writing this, I was disturbed by a noise, and for a moment thought one of the eartie had by some means got overhoard, for it sounded exactly like an exhausted antinal puffing and blowing; it proved to be a large school of p

less than seventy mullets while fishing off the steamer's deck. These fish run in schools, and will average two and a balf pounds each in some schools and in others they are smaller. Generally they are equal in size throughout the entire school. We fish for them with trout hooks, baited with dough mixed with enough cotton to toughen it. The fish sucks the bait, not striking it as in the manner of gamelish, but they make an interesting play after being hooked, for they are extremely rapid in their movements, and a man with a good, light rod could elke out a pleasant hour or two. As the fish remain very near the surface and their motions are at all times visible, a person gets very much interested in winessing the way in which they hook themselves; and yet it soon grows thresome, for the story gets old and excitement cannot be maintained for the average fisherman. I have seen corbenoes caught, but never except by throwing over a lot of waste meat, bread,

for the story gets old and excitement cannot be maintained for the average fisherman. I have seen corbenous caught, but never except by throwing over a lot of waste meat, bread, etc., and casting in their midst.

One would suppose the fish would diminish in numbers owing to the immense number of sharks and pelicans. The latter, in flocks of from a dozen to a hundred, go out to sea each morning and return just before sundown to their roosts on the islands in the bay; or, when the fish are inside the reef, these birds can be seen gorging themselves for hours together. How they utilize the numbers eaten would puzzle a philosopher. I saw one bird devour twenty-seven millet, by actual count, and it wasn't a very good day for pelicanscibler. It seems like a singular statement, but the jumping and splashing of the fish about, the vessel during the night quite frequently keep me awake, the water scening to be fairly alive with them. They evidently come in on the flood tide, and perhaps seek the surface in such vast numbers owing to the absence of their natural enemies, the pelican and the man-of-war hawk.

of-war hawk

of-war nawk.

Should you desire to take a trip into the swamp with me after monkeys, parrots, snipe, toueans, duck, tigers and deer, I may accommodate you in another letter.

### Matural History.

THE QUESTION OF SHARKS SWALLOWING THEIR YOUNG.

IN a recent issue of Forest and Stream an account of the finding of several young sharks in the stomach of a large female by Mr. E. G. Blackford, of Fulton market, was given. This article was extensively copied, and the general impression seemed to be that the young had been taken in for protection.

Knowing how little is known about sharks in general except stories of their voracity by sailors and details of their structure by zoologists, and that, although they bring forth their young alive, their character for gluttony was such as to make it appear strange that they should care for any living thing which they could either swallow or bite in two, we were interested in this incident. Awaiting a favorable opportunity we interviewed Mr. Blackford, who told us that he bought the shark because it looked big and strange, and that he had no use for such a beast except the interest which he always takes in all such creatures, that is, to learn their habits and find out how they live and what they eat. He ordered a man to open it and if anything unusual was found to bring it to him. The fish was the "mackerel shark," Isuropis elekuyi, Gill, and contained ten young ones, each two feet long.

Our informant understood that they were in the stomach of the fish, but to make sure of this we now have the facts from Mr. Blackford, who says that the man only brought him the young and said they were from the stomach, but that he did not believe he could tell the difference between the stomach and the womb, and that, as the young sharks appeared fresher than the old one, he thinks that they had never been born. This certainly seems to be the most reasonable to any one who knows anything of the habits of sharks, or of the swift action of their digestive apparatus, and, as we before stated, there was no mark upon the little ones to show that digestion had begun, even to the removal of the mucus upon their skins. So for this case does not prove that sharks swallow their young for protection.

THE MOLLUSCA OF RIVERDALE, NEW YORK CITY

WITH NOTES.

Third portion of the Twenty-fourth Ward of New York city in which the following shells were collected is bounded: North, by the south line of the city of Yorkers; South, by Spuyten Duyvel and Kingsbridge; West by the Hudson River, and East by Central avenue, covering in all an area of about four square miles, and is a rough and rocky district. There is one large pond (Yan Courtland Lake) and several smaller ones; several brooks, of which Tibhet's is the largest. A few empty into the Hudson, but the greater number into Tibbet's Brook, that into Van Courtland Lake, that again by a continuation of Tibbet's Brook into Spuyten Duyvel Creek. The shores of the Hudson River adjoining this district are usually sandy beach; beyond, and and stony bottrick are usually sandy beach; beyond, mud and stony bottom, with occasional eel grass.

Mpu archaria, Linn.—Very abundant in the Hudson between tide-marks; young are taken from early spring till

oven tide-marks; young are taken from early spring in last of June. Mactra lateralis, Say.—A very common shell in the Hudson between tides. Our specimens are much smaller than those taken on Long Island or in the Harlem River. Telling Jussey, Phil.—Very common in the Hudson between tide-marks, but small, the pink variety not so common

Spharium partumeium, Say.-In all still water ponds very commor

Spharium sulcatum, Lam.—Found in Van Courtland Lake and Tibbet's Brook. Of specimens collected in August few were adults. Very common. Pisudum abatum, Hald.—Rather common in Odell's Pond. Often found attached to leaves of water plants and floating sticks.

Pisidium aquilaterale, Prime.—Found in small mud holes.

ry rare.

Pisidium compressum, Prime.—Odell's Pond, common.

Unio complandus, Sol'd.—Small in Tüblet's Brook, with

uish white narce. In Van Courtland Lake large, with

uish, salmon, blue and white narce. Very abundant in both

localities. Mythus plicatulus, Desh.—One-half valve only found on the Hudson, at Thorn's Dock. No doubt carried from Spuyten Duyvel Creek, where it is common.

Ostrea bovealis, Lam., and var. costata.—In Hudson very common, but small.

Object borders, Lain, and var. Oscar.—If Theoson Common, but Small.

Hyathia arborea, Say.—Side hills in shady woods under sticks, and bark: also on the borders of swamps, under sticks, etc. Very abundant.

Hyathia indentata, Say.—On side hills in woods only, under stones and leaves. Not so abundant as the last.

Pseudobjachea neanusemita, Binn.—In rotten stumps, generally near streams. Not rare.

Commun. Paten. Department of the stumps, under leaves, etc., in shady places. Rather rare.

Helicodosus lineata, Say.—Generally in rotten wood near water, but have taken it in dry situations. Moderately abundant.

undant. Limax agrestis, Linn.—Under bark of logs near water.

Limax agreetis, Liun.—Under bark of logs near waver. Very common and of large size.

Limax campestris, Binney.—Very common in fields, on paths and on road sides; generally observed in early morning.

Limax glarus, Linn.—Taken in greenhouses. Rather com-

mon.

Linax maximus, Linn.—Found in mushroom beds. The mushroom spawn was received from France. At one time quite abundant.

Angulspira alternata, Say.—Found at roots of willows in sandy soil near water and also in moist places in woods.

sandy soil near water and also have year common.

Patria striatella, Anil.—Under stones and sticks at edges of woods bordering fields. Rather rare.

Stroklit happrindized, Say.—Found almost everywhere, but more common and larger on sticks near water's edge.

Stenotrena hissarta, Say.—On side hills under stones in dry

Section renal arrand, Say.—On side hills under stones in dry places. Very common.

Stenotrema monodon, Rackett.—On side hills in dry places, and in moist woods, have taken this species on trees several feet from the ground. Common.

Monodon var. fraterna.—Same station as the last. Not so

common. common. Triodopsis tridentata, Say.—Very common in woods near water and dry bill sides, a beautiful pink lipped variety is sometimes found. I have taken specimens without any teeth, others without teeth on outer lip, and others with the parie-

Mesodon thyroides, Say.—Very common in woods both in dry and moist situations. Have taken this on trees four feet

Pupa pentodon, Say.—Rare; found under logs with vertigo ovata in damp woods.

and in damp woods.

Pupa contracta, Say.—Very common near water, but rare dry woods. Have taken three hundred at one time in one

vertigo ovala, Say.—Very common under leaves, sticks, etc., in damp woods Vertigo simplex, Gould.—Taken in company with ocuta.

winea avara, Say .- On dry hill sides under stones. Com-

Succinea acara, Say.—On dry min successions.

Succinea acara, Say.—On dry min succession borders of succession acadis, Gould.—Taken on salt grass on borders of salt water pond. Not so abundant as acara.

Telennophorus Carolinensis, Bosc.—Very abundant under logs in woods, also under the bark of chestnut trees, and in holes in trees half filled with water.

Pullifera dorealis, Binn.—Not so abundant as the above, but not by any means rare. Taken under logs and in stumps. Carychina erigium, Say.—Under bark and sticks near water. Very common.

but not by any means rare. Taken under logs and in stumps. Carychium exignum, Say.—Under bark and sticks near water. Very common.

Limacophysa certerate, Say.—Common.

Limacophysa desidiuse, Say.—Common, but not so common as some two years ago, in small running streams.

Limacophysa pubustris, Mull.—Common, but not so common as some two years ago, in small running streams.

Limacophysa hamils, Say.—Common in stagnant pools.

Radiz cobunctla, Say.—Common in several localities.

Var macrostoma.—In mud-hole, dry in midsummer. Some five years ago this form was very abundant, but has now entirely disappeared, a much smaller form of Columella having taken its place.

ken its place.

Physa heterostropha, Say,—Common in every pond and

stream.

Physic Primeana(?), Tryon.—Some time ago took large numbers of a form which I refer to this species in one location only. They have since entirely disappeared.

Helisman bearinatus, Say.—Very common in Tibliet's locals.

ook. Helisoma tricolcis, Say.—Van Courtland Lake. Rather rare, Gynaulus parcus.—Tibbet's brook. Common. Planorbulu arnigerus, Say.—Common in several ponds, Aneglus fuscus, C. B. Adams.—Tibbet's brook. Rare. Aneglus paradletis, Illal.—In one pond. Very common. Risson minuta, Stimp.—Very abundant on drift in salt water and near the Hudson

### FOOD OF MARINE ANIMALS.

A T the recent meeting of the Association of German Nat-uralists and Physicians, held at Danzig in September last, a number of papers relating to all branches of science were read. One of the most interesting of all these was by Prof. Moebius, of Kiel, whose investigations into the nature of Eczoon have recently attracted so much attention in the scientitic world. An abstract of his paper "On the Food of Ma- 1

rine Animals," is given in Nature, and we here reproduce it:

rine Animals," is given in Nature, and we here reproduce it:

In the sea, therefore, is generated by far the greater number of minial types, and these again in quantity and in bulk are throughout regulated by the existing supply of nourishment. This in its turn depends upon the organic matter of plants which in the sea also supply nourishment to its inhabitants. In our own seas, the North Sea and the Baltie, marine grasses are discoverable near the coast, while twenty to fifty meres lower are other kinds of plants; deeper still if we search we shall find few or none. Loose strips of plants that have been torn away from their roots have been brought up from a depth of some hundred metres; in the Baltic and North Sea these form a durk, soft, spongy mass. Nothing living is visible in this if placed in a tub; but if strained through a sieve tipy mussels, snails and crustacea become visible. In the depths of the sea-mud lining the bottom are countless worms, unuseds and little animals which feed upon the spongy mass. Flounders and other fish penetrate into these mud-depths and devour the animals that are there. When the sea-bottom, however, is formed of soft clay, nothing beyond a few worms here and there will be found. Thus in the deeper portions of the Mediterranean, otherwise so rich in animal life, nothing at all is discoverable. The Professor, in the course of his renarks, went on to show that the supply of nourishment to the inhabitants of the sea was now and would be hereafter undininished; and that the propagation of animal life in the sea self-should last.

FASCINATION.—The phenomenon of snake fascination has never been satisfactorily explained though many explanations of it have been attempted. One of the most recent and most plausible of these has just appeared in Nature and is given The writer says:

of it have been attempted. One of the most recent and most plausible of these has just appeared in Nature and is given below. The writer says:

In 1859 (21 years ago) I followed in the rocks of Avon, close by the park of Fontainehleau, the fairy paths of Denecourt, when the approach of a storm induced me to leave the blue arrows, indicating the right path, for a short cut. I soon lost my way, and found myself in a maze of braubles and rocks, when I was startled by seeing on my left hand, at a distance of about ten yands, a snake, whose body, lifted up from the ground at a height of about a yand, was swinging to and fro. I remained motionless, besitating whether to advance or to retreat, but soon perceived that the snake did not mind me, but kept on maintaining its swinging motion, and some plaintive shrieks attracted my attention to a greenfinch perched on a branch of a young pine overhanging the snake, with his feathers ruffled, following by a und of his head on each side of the branch the motions of the snake. He tottered, spread his wings, alighted on a lower branch, and so on until the last branch was reached. I then flung my stick at the snake, but the point of a rock broke it and the snake disappeared with the rapidity of an arrow. On approaching the spot—a real abode of vipers—which I did with the greatest precaution, knowing by observation that death may be the result of the bite of a viper, I saw the greenfinch on the ground agitated by convulsive and spasmodic motion, opening and shutting his eyes. I put him in my bosom to try the effect of heat, and hastened to reach the park of Fontaine-bleau. The little claws of the bird, opening and shutting, perhaps as an effect of heat, made net hink that he might perhaps be able to stand on my finger, and he did clutch it, and held on with spasmodic squezzes. In the park I got some water, and made him drink it. In short, he revived, and finally flew off in the line-trees of the park. Now, while following the motions of the snake and bird, I experienced a singul

ANCIENT HUNTING GROUNDS OF LOUISIANA.-The following extracts are from "An Account of the Red River (Louisiana) and Country Adjacent." To Gen. Henry Dearborn, Sec. of War. By John Sibley, Natchitoches, April 10, 1805. They were printed in the American Register for 1808, and are certainly worth reproducing for the benefit of our readers:

Near Natchitoches there are two large lakes, one within a mile, the other six miles to the nearest parts. One of them is fifty or sixty miles in circumference, the other upward of thirty. These lakes rise and fall with the river. thirty.

Tis almost incredible the quantity of fish and fowl these lakes supply. It is not uncommon in winter for a single man to kill from two to four hundred fowl in one evening. They lift between sundown and dark. The air is filled with them. They load and fire as fast as they can, without taking any particular aim, continuing at the same stand till they think they have killed enough, and then pick up what they have killed enough, not then pick up what they have killed. They consist of several kinds of duck, geese, brant and swan. In summer the quantities of fish are nearly in proportion. One Indian with a bow and arrow sometimes will kill them faster than another with two borses can bring them in. They weigh, some of them, thirty or forty pounds.—American Register, p. 55.

The accounts given by Mr. Brevel. Mr. Grappe and all other lunters with whom I have conversed of the immense droves of animals that at the beginning of winter descend from the mountains southwardly into the timbered country, is almost incredible. They say the buffulo and bear particularly are in droves of many thousands together, that blacken the whole surface of the earth, and continue passing without

the whole surface of the earth, and continue passing without intermission for weeks together, so that the whole surface of

the country is for many miles in breadth trodden like a large

THE PAPPABOTTE-Rutland, Vt. Oct. 15 -Edior Forest THE PAPPAROTE—TAXABLE, Vol. 10.—PRIOR EVEN and Stream: Now won't you please to inform an anxious public what the deuce a Pappabotic is? We have heard a great deal of this thing in your columns, but whether it is fish, flesh or fowl, or hard-shell we don't know. Please explain. VERDE MONTE.

We will, we will. The strain shall be forthwith taken off the mind of "Verde Monte" and others, and their anxiety and that of the public shall be in a measure relieved. Know then, Oh anxious public, that a Pappabotte is neither fish, flesh nor hard-shell, but fowl. In fact, not to put too fine a point on it, a bird. Pappabotte is the Creole French name given in Louisiana and some of the Gulf States to the gray plover, or Bartram's sandpiper (Actiturus bartramius). name is referred to by Andubon in his biography of this species. Other names applied to it are upland ployer and field ployer.

### Mish Gulture.

THE ALABAMA FISH COMMISSION. - In our list of Fish Commissioners published last week we left out this State because we failed to hear from them, and as in no case did we use any information at second hand we were obliged to leave Alabama out. We are sorry now that we did not wait one week more, as we have just heard from them; but beginning on the 1st of September we thought that all not heard from by the middle of October must certainly have disbanded or ceased to exist. Few know how much labor it involves to get up the annual list, for although many respond promptly, others are absent, and it takes several letters to find them and get a re-There are changes every year, and as the Forest AND STREAM is the organ of communication between all fish culturists in the civilized world, it is a matter of public necessity as well as convenience to have such a list. To complete it we now print :

### THE FISHWAY QUESTION IN IOWA.

#### A MILLER PROTESTS.

Oxford Mills, September 20, 1880.

Oxford Mills, September 20, 1880.

Editor Euroka.—You will oblige me much if you will give me spare to express my views in relation to a law passed by the Eighteenth General Assembly of the State of Iowa.

Chapter 128, Section 3, of said law reads: "If, within sixty days after the service of a notice by the sheriff of the county, the owner, agent, or party in charge shall fail to construct and attach a fishway to such dam, as required by the Commissioner, then the county Board of Supervisors shall immediately proceed to construct and attach the same; and when so constructed, the original cost, and twenty per cent. thereon, as a penalty, shall be entered upon the tax book of the county, and shall be a lien on said property, to be collected in the same manner as provided by law for the collection of other taxes." tion of other taxes.

tion of other taxes."

Section 4 reads: "To carry out any of the provisions of this act, the county Board of Supervisors may issue county warrants for the payment of such expenses, and when the taxes are paid, the warrants and all accrued interest thereon shall be refunded to the county, and the balance, after paying the Clerk and State Commissioner and Board of Superior the Clerk and State Commissioner and Board of Superior visors for their services etc., and proceeds to be paid over to the county treasurer, and will become a part of the school

To this the Fish Commissioner adds, on his own responsi-

the county treasurer, and will become a part of the school fund."

To this the Fish Commissioner adds, on his own responsibility, with all the dignity that belongs to his office, in his notice to mill owners: "No temporary gork will do, as it will be at the mill owner's expense, as the law requires him to keep it in constant repair."

Are Editor, I am a citizen of these United States and desirous of showing willing obedelence to the laws thereof. I derived my title to my land from the United States government, clear of any and all encumbrance, without any reservation of erecting or upholding fishways for the benefit of other parties. Therefore I claim protection from the United States from imposition and unjust laws. Neither the State of lown nor any other State has any right to pass any law that will amony, hamper, endanger or depreciate the value of any man's property, without paying him in full for all damages he may sustain. If the people of the State of Iown want to preserve the fish, what claims have they on the mill owners to comyel them to be at all the expense? Does it benefit the miller more than the farmer, or any one else? Do they consider the mill owner an intruder? Do they prefer cat-fish and wall-eyed pike to the manufacturing interests of the State? If so, why don't they pass a law that will give then the power to destroy all the mill-dams in the State, and give the fish a chance? They have just as much right to pass a law of this kind as they have to pass the other.

What benefit does the miller derive from this heavy expenditure of money? You rarely find the miller with a fishpole in bis land. It is not this class of men who reap the benefits from the fish law. For my own part I would give considerable money if there were not a fish in our rivers. They are the cause of bringing a parcel of lazy loafers to our fishing grounds, from the country and the towns, who destroy the surrounding property, tearing down and burning fences and descerating the Sabbath day, to the annoyance of quiet, peaceabl

this that the millers are required to be at from \$300 to \$500 expense in erecting a fishway to preserve the fish and contribute to their pleasure; not alone this amount of expenditure, but they are required to keep this annoyance and encumbrance in perpetual repair, no matter whether it is carried out by any flow of ice and logs that passes over the dam—which will be the case nine times out of tem—or whether it carried out the total pass of the dam is a considerable to the dam is well as the case in the dam is a considerable to the dam is set to the dam is the dam i

carries out the dam as well.

Heretofore the nill owners of the State of Iowa have been well protected in their rights by the enactment of good sound laws on water privileges; and for this reason Iowa stands

second to no grain manufacturing State in our Union—as the reports from the late Miller's Convention at Cincinnati will show. Is it possible that all the protection we have hereto-fore enjoyed is to be destroyed by some wild lish fanatic who cares more for a wall-eyed pike or a sun-fish than he does for all the manufacturing interests of the State? Let the millers of the State rise in their might and defend themselves against such unjust and arbitrary laws, as they have done heretofore in such cases of imposition, and they will undoubtedly come out victorius

If this fish law can be enforced, then the next law I expect If this fish law can be enforced, then the next law I expect to see enacted will be one requiring every farmer who owns 160 acres of land on the line of any railroad throughout the State of fowa to build, grade and lay a track the entire length of his farm at his own expense. Not only this, but the law will require him to keep it in constant repair, at the risk of losing the balance of his farm if he does not comply with all the requirements of the law, whether from unwillingness or inability. All these benefits he is expected to donate to the travel of the general public. Why not enact and enforce a law of this kind? One can be as easily enforced as another. see no difference

I can see no difference.

If the people of the State of Iowa want to stock their rivers with fish, why not levy a general state tax for the purpose of erecting these fishways and keeping them in repair, at the same time giving the mill owner a guarantee that any damages he may sustain from the erection of such fishway danages he may sustain from the erection of such fishway will be promptly paid by the State, or the county in which the mill dam is located. The State has no more claim on the mill owner in this respect than it has on the farmer, mechanic or any other class of men. I think it is the duty of the press throughout the State to come out boldly and denounce all such unjust laws.

#### REPLY BY COMMISSIONER SHAW.

After giving the law, the correspondent, who evidently, from what is written, is a mill owner, gives what appears to be his earnest, honest sentiments, and states quite fully what he thinks to be the grievances to which dam owners are subjected by the fishway law. Being a good argument from his point of view, it deserves a careful and candid consideration at the hands of the public.

He says first: "I am a citizen of the United States and desirous of showing willing obedience to the laws thereof. I derived my title from the United States government, clear of any and all encumbrance, without any reservation of erecting or upholding fishways for the benefit of other parties," and claim protection from any law that will hamper.

on any and an encumprance, without any reservation of erecting or upholding islaways for the benefit of other parties," and claim protection from any law that will hamper, endanger, or depreciate the value of my property, without payment in full for all damages sustained. "The writer overlooks the fact that he is but one of several hundreds that have obtained titles exactly alike from the general government to the banks of the Wapsipinicon River, and that by making the river impassable for fish he has been depreciating the value of their property, thereby doing individually to all these parties just what he now complains the State should not do to him.

We hold these principles to be well settled by usages and decisions—so many that we find it impossible in a short article to quote but a very few of them:

1. In any grant from the public to individuals, any privilege which is not expressly granted is withheld.

2. A river is a public way.

3. The right to the water and fish in a stream is a joint one to all the owners, and must be so used by each as not to

3. The right to the water and fish in a stream is a joint one to all the owners, and must be so used by each as not to unreasonably interfere with the rights of others.

4. The passage of fish in a river is a public right.

5. The Legislature has the right to make such laws as will protect the public from injury by an improper use of any of these public rights.

To partially prove the correctness of these positions we will submit a few decisions.

"Every owner of a dam kolds it on condition or limitation that our divisions and recombiled scarce, way shall be allowed.

"Every owner of a dam bolds it on condition or initiation that a sufficient and reasonable passage way shall be allowed for fish. This limitation, being for the benefit of the public, is not extinguished by any inattention or neglect in compelling the owner to comply with it." (Stoughton v. Baker, 4

Mass., 528.)
In that case there was neglect to build a fishway from 1634 to 1789; but it was held that the duty continued.
"The preservation of fisheries is for the benefit of the public. The right to have the fish pass up a river is a public right. The right to tack the fish is in the owners of the soil; right. The right to catch the fish is in the owners of the soil; but the right to have the fish there, so that they can be caught, is a public right." (Commonwealth v. Essex Co., 13 Gray, 247.)

is a pointe right. (Commonwealth v. Essex Co., is thay, 247.).

"The grant of privileges and exemptions to a corporation is strictly construed against the corporation, and in favor of the public. Nothing passes but what is granted in clear and explicit terms." (Ohio Life Ins. Co. v. Debolt, 16 Howard, 435.)

"Ownership of the banks and bed of a stream gives to the proprietor the exclusive right of fishery opposite his land, as well as the right to use the water to create power to operate mills; but neither the one nor the other, nor both combined, confer any right to erect any obstructions in a stream to prevent the free passage of fish up and down the river at their accustomed seasons, as such obstructions would impair and ultimately destroy all such rights owned by other proprietors both above and below the obstruction on such stream. both above and below the obstruction on such stream.

both above and below the obstruction on such stream."

"Such water is everywhere regarded a public right, and fisheries, even in waters not navigable, are so far public rights that the Legislature may ordain and establish regulations to prevent obstructions to the passage of fish, and to promote the usual and uninterrupted enjoyment of the right by riparian owners." (Commissioners v. Holyoke Water Power Co., Supreme Court of United States, December Term, 1872.)

This Holyoke case is the most noted that has ever been determined in this country, and was especially favorable to the dam owners, as a moment's glance at what was claimed by the defendants will show.

the defendants will show.

It was claimed for them, as has been claimed by our cor

It was claimed for them, as has been claimed by our correspondent, that they had a good litle from the Government, and so were entitled to use their property as they saw fit.

It was claimed that they had used the water power, as they were using it, for a long period of time and so had obtained the right to use it by statute of limitation.

It was claimed that they had expended \$2,000,000 in improving their power, and so it was against public policy to compel them to put in a fishway. Also, that they had exploded for those rights, and that that fact should relieve them.

But more especially it was claimed that they had as pecial charter from the State Legislature permitting them to build just such a dam as they had built.

We have not time or space to go over this case, but will say that all that was claimed for the defense was proved or admitted; that it was argued by eminent counsel, both be-

fore the Supreme Court of Massachusetts and the Supreme Court of the United States; that on August 31, 1872, the Supreme Court of Massachusetts entered a decree against the defendants, compelling them to put in a fishway; that upon appeal to the Supreme Court of the United States, the decree was affirmed at the December term, 1872, and that the owners were compelled to put in a fishway. We could cite decens of decisions bearing upon the question, and in all our reading know of no one decision that has not borne in the same direction. So we consider the question virtually settled, so far as the courts are concerned.

The Judiciary Counnittee of the House and Senate of the Seventeenth General Assembly of Iowa, composed of the best of legal talent, so determined and reported, after a full investigation, when this law was before them for their action.

of legal talent, so determined and reported, after a full investigation, when this law was before them for their action.

Outside of this question of law there is one of right or "justice." Originally all the purchasers of property along a stream pay the same price for their lands. Fish were abundant along the streams, and are the property of the joint owners. One man builds a dam that effectually stops the passage of fish; but as they are plenty, no one objects. The mill power brings wealth to the owner, until the boasts of its value. The dam brings barrenness of fish to the stream, until the mill lower, secring the little that is left, says: "I would give considerable money if there were not a lish in our river."

Now those who have suffered these losses ask those who how those who have surrect these because the second have assumed to own all there was of value along the river, and in so doing nearly destroyed their neighbors' rights, to so use the privilege they are enjoying as to permit the fish to pass up the streams through the waste water that flows over pass up the streams through the waste water that flows over their dams, in order not to entirely annihilate the fish—know-ing full well that what they ask will only partially restore to them their rights, but being willing to suffer this much rather than to injure in the least the water powers that furnish the notive power for an industry which is fully and justly appre-ciated.

ciated.

The fair discussion of this question would occupy more space than we have at our command, but we think that what The Bar tustusers space than we have at our command, but we think that what we have said covers the case fully, where the builders own the land wholly upon which their dams are built. But, it might be added, in meandered streams, like the Wapsipinicon, a portion of the lands upon which the dams are built—that is, the bod of the stream—has never been bought or sold, and belongs as justly to the poorest person in these United con, a portion of the lands upon which the dams are builf— that is, the bod of the stream—has nover been bought or sold, and belongs as justly to the poorest person in these United States as to the parties who assume to own the dams that are upon them; and there is no question, as a matter of fact, but that an action for their entire removal could be sustained in the proper courts, if sufficient cause were shown for so do-

What we have written is in the kindliest of feeling toward

What we have written is in the kindliest of feeling toward mill owners, but is what we believe to be the facets and the law in tne case, and what is being demanded by the masses of our people at the hands of owners of dams.

The Fish Commissioner claims to have made plans of fishways, as far as he was able, so that they shall not interfere with the water powers (as they only use the waste water), and that, in his opinion, they will add strength to the dam, while they are as cheap as durability and efficiency will permit.

B. F. Shaw.

### FISH CULTURE IN FRANCE

HROM the annual report of M. Raveret Wattel, Secretary to the Societe d'Acclimatation of Paris, for the past year, we publish the following translation of that portion of

to the Societe d'Acclimatation of Paris, for the past year, we publish the following translation of that portion of it which relates to fish culture. He says:

As in preceding years, the subject of repeopling the streams has continued to occupy you seriously, and while seeking to find a way of putting an end to the abuses of fishing and poaching, which have caused the disappearance, more or less complete, of fish in almost every river, you endeavor to enrich our icthyological collection with rustic species of rapid growth, and consequently more fit than indigenous species to facilitate a speedy reproduction of fish. Among these exotic species the salmon of Galifornia merits to attract our attention in a particular manner, because of its remarkable vigor, its unusually speedy development, and its fliness to endure a high temperature. Thanks to Prof. Spencer F. Baird. Commissioner-General of Chisheries in the United States, our society has obtained a considerable quantity of fruitful eggs of the Edahas quantat. These eggs were intrusted to several of our colleagues, and judging from the reports which we have received, the species does not seem to lose in any degree the excellent qualities which distinguish it in America. Already a considerable number of fry have been emptied into a great many rivers, and permit us to expect the acclimatation of this excellent species of salmon in our French waters. We cannot express too many thanks to Prof. Baird. who, by his excessive generosity to our society, has permitted us to obtain so preclow an acquisition.

We owe, besides, great gratitude to Mr. Fred Mather, of

species of sammin and Prof. Baird, who, by his excessive generosity to our society, has permitted us to obtain so precious an acquisition.

We ove, besides, great eratifued to Mr. Fred Mather, of Newark, N. J., assistant to the Commission of North American Fisheries, who has been kind enough to see to the shiping of the eggs destined for the society, and to contribute in assuring the success of the invoice by his intelligent and valuable assistance.

The improvements made in foreign countries, and especially on the other side of the Atlantic, in the artificial reproduction of fish, have excited our attention, and you have bailed with great interest the information given you as regards the labors of the superior Commission on Fisheries in the United States. An assembly of distinguished and learned men and of professional experts, having at their head the entinent Prof. Spencer F. Bairt, this commission renders the greatest services to pure zoology, as well as to tisking industries and the culture of fish. Trittaphing over every difficulty, it has succeeded in applying to the sea-tish the same process of artificial multiplication, whose usefulness a few years ago was contested with regard to the species living in fresh water. It is right to add that it is on a gigantic scale, and that this process will be put in operation at the end of the present year. The Universal Exposition of 1878 furnished the occasion of work such as could not escape your attention. You had a report on the culture of fish at the great international concourse presented to you, and Mr. Chahners has given you an account of the interesting observations which he had occasion to make at the Aquarium of the Trocadere during the time that the direction of this magnificent establishment was confided to him.

Mr. Dussatel sent you a detailed account of the transformation of salty swamps into reservoirs for fish, and of the importance which the creation of such reservoirs would hav

Mr. Duscastel sent you a detailed account of the hastor-mation of salty swamps into reservoirs for fish, and of the importance which the creation of such reservoirs would hav as regards public utility. Finally, you have recorded with care the communications forwarded by Mr. Ditten on the reproduction and protection

of lobsters and oysters in Norway, and those regarding the researches of Dr. Henry Le Roux on the hybridization of the

### Sea and River Hishing.

THAT SIX AND A QUARTER POUND BASS.

WE recently referred to a photograph of a small-mouth black bass, Micropterus salmoides, sent us by Dr. Sterling, which had the effect of removing our doubts about their reaching this weight, or rather a pound and a quarter below the avoirdupois named was the limit at which we stuck The letter which accompanied the picture was mislaid, but recognizing the necessity of placing this upon record in order to remove the skepticism of others as to the size attained by this fish in Lake Erie, we now publish it:

CLEVELAND, O., Sept. 14.

EDITOR FOREST AND STREAM:

I enclose to you the photograph of a small-mouth black bass which weighed exactly six and a quarter pounds, without the addition of a lead sinker in its stomach either. I made a cast of the fish at the time it was taken, but being hastily done the slime was not perfectly removed, consequently the scales are not well defined, though the proportions and parts of the fish are correct. I have caught this fish in the St. Lawrence, Niagara River, and Sault Ste Maria as well as throughout Lake Eric, and at several places in lakes Huron and Superior, but only in one locality have I found them to exceed four pounds, and that is among the islands at the head of Lake Eric.

The large mouth bass is never taken in Lake Fig. This. EDITOR FOREST AND STREAM:

head of Lake Erie.

The large mouth bass is never taken in Lake Erie. This fish frequents the marshy, grass-grown rivers and estuaries; he is green, loggy and slimy, smells of his surroundings, and when cooked has about the same taste; is soft in flesh; while on the contrary the small mouth is the most active fish on the hook of his size. He frequents clear, cool water, and, if in a stream that is rapid and aerated, his flesh is particularly hard, and I have a positive belief that, like the turbot, he improves by two or three days' keeping, which we can say of no other fish.

E. Sterling, M. D.

#### DO FISH HAVE FITS?

WHILE walking by the Hudson at Inwood the other day I saw a succession of bright flashes on the surface of the water coming from some object advancing down the river. It proved to be a blackfish, and it was going through the most singular gyrations, unlike any that I have ever seen in sick, injured or dying fish. It lay flat upon its side; its fins were without motion, its eyes were bright, not clouded; its month was rigidly open and partly out of the water, and its tail struck downward and a little inward, so that the fish performed a complete revolution in the course of four or five flaps of its tail. The flap of the tail was not intermittent or irregular, but was a strong, healthy beat, and the gyrating motion of the fish was suggestive of waltzing. Thinking that it had escaped from the hook, or had been thrown back after being taken out of the water, I examined it closely when it came within a few feet of the bank, and saw that it was a sound, well-fed fish, without mark of hook or injury of any kind. It did not struggle like a dying fish, nor float for moments without motion, nor endeavor to swim to the bottom, and in the five minutes or more that I kept it in sight it did not internit in the strength or regularity of the heat of its tail. I threw some pebbles into he water near it, but not until I had thrown several handfuls did texhibit signs of returning consciousness. When I used large stones to create a greater shock in the water the fish made efforts or right itself, and, after much vigorous flound-ring, succeeded. At last I tossed a leavy rock within a couple of feet of it, and with a frightened rush it dived toward the bottom and did not appear again. I never knew that flish had a nervous organization of sufficiently high order to entitle them to have fits, but this particular fish acted like the victim of a nervous disorder. Can anybody give an explanation of its conduct? WHILE walking by the Hudson at Inwood the other

The symptoms are those of a fish which has been poisoned by persons who use forbidden articles for procuring minnows for bait, but it is, of course, impossible to say.

Big Striped Bass—New Fork, Oct. 21.—Having seen an inquiry in your issue of last week, asking if there was any record of the largest striped bass ever taken with rod and reel, I would say that there is on record at Pasque Island Chib one taken some ten years ago by A. B. Dunlap weighing 62 lbs. The writer took one two years ago of 604 lbs. weight, also on record at above clib. I saw one in New Bedford, taken at Noman's Land, weighing 64 lbs, and have heard of one of 67 lbs., and from reliable information. There is recorded at Pasque Island many between 50 and 60 lbs, and between 40 and 50 lbs. is no rarity with us at Pasque. All of above were taken with rod and reel. Yours truly,

Frank O. Hermens.

We are glad to receive such notes as the above, and place these things permanently upon record. When future historians of angling wish to write up any fish, they will naturally turn to the files of Forest and Stream for such information and will miss all items in local papers and occasional magazine articles. Most sportsmen recognize the fact that FOREST AND STREAM is the record for all connected with the Rod and Gun, and that no matter where a thing may be printed it is not on record until embalmed in the pages of Forest and Stream, no more than the pedigree of a Jersey bull is on record if published in a village newspaper and omitted from the Herd Book.

We therefore desire to impress upon our readers that for all purposes of record of sizes of game animals and feats with rod and gun, Forest and Stream is not only the record but the only one

Alaska Salmon.—A correspondent of the San Francisco Bulletin, writing from Alaska, says: "As for the salmon, as seen this morning urging their way up the swift, brawling

currents—tens of thousands of them, side by side, with their backs out of water in shallow places—nothing that I could write may possibly give anything like a fair conception of the extravagance of their numbers. There is more salmon appaextravagance of their numbers. There is more salmon apparently, bulk for bulk, than water. In fording the stream the writhing multitudes, crowding against one another, could not get out of one's ways. One of our men waded out in the midst of them and amused himself by seizing them above the tail and swinging them over his head. Thousands of them could thus be taken by hand while they are making their way over the shallows among the stones. Whatever may be said of other resources of the territory, it is hardly possible to exaggerate the importance of her fisheries. Not to mention cod, herring, halibut, etc., there are probably not less than a thousand salmon streams in Southeastern Alaska as large or larger than this one (about forty feet wide) crowded with fine salmon every year. The run commenced this year more than a month than this offection to the first water from the station overly year. The run commenced this year more than a month ago, and the King Salmon, one of the five species recognized by the Indians, was running in the Chilcat River about the middle of last November."

by the Indians, was running in the Chileat River about the middle of last November."

\*\*Y

\*\*SILVER BASS.—Illinois State Laboratory of Natural History.—Normal, RL, 0ct. 18.—In response to your request for information about the use of the name "Silver Bass." I respectfully report that the name is applied in Northern Illinois very generally to Pomya nigromaculetus, Z. S., known in the Illinois and Mississippi regions as the black croppic. I don't know about the change of color, but the purple spot on the operculum and the long lower jaw are right, while the body is short and deep. If this should prove to be your correspondent's species, and if a knowledge of their natural food is of any importance to him, it may be worth while to note that I have found the young dependent upon Entomostroes much longer than most other fishes, feeding upon little else until three or four inches long. The food of the adult varies in the Illinois River with the time of the year. In early spring they take entomostraca in immense numbers; in summer they depend chiefly on the aquatic larvae of May-flies dragon-flies and the like, and in autumn, as the weather turns cold, about a third of their food, on an average, consists of small fishes. The larvae of May-flies and dragon-flies are, on the whole, much the most important of their food resources. For usefulness the species ranks here about with the white bass (Roccus chrygors).

\*\*Montreal, Canada.—In your issue of the 14th inst. a paragraph occurs headed "Silver Bass." There is a fish taken in Lake Ontario locally known by the latter name. It belongs to the genus \*Labrax\*, but I cannot determine the species. The small-mouthed fishes which Mr. Beeg gave the Society in France, and which came from Lake Ontario, evidently do not belong to the bass family. The mouth is large in \*Labrax\*. I am anxious to see a published list of this genus, as \*species occurring in northern waters are not identified.

WM. COUPER.

GRUBS IN BASS .- London, Can., Oct. 19. - While reading a GRUBS IN Bass.—London, Can., Oct. 19.—While reading a letter in your paper, from some gentlemen fishing in Michigan, I noticed they had caught some bass, similarly affected to many I have caught, namely, with grubs in the flesh. The grubs seem to be firmly imbedded in the flesh, but do not appear to injure the fish in the least. I have caught many like this in the Lakes of Muskoka and also in some of our rivers. Though not very nice-looking before being cooked, after that I never could distinguish anything wrong with them. I would like to hear very much what is the cause of it, and if they affect the fish.

A. G. C.

W Grubs in Fish.—Cincinnati, O., Oct. 20.—In regard to the communication of "W. D. T.," in Forest and Stepam of Oct. 14, relating to the presence of grubs in black bass, I would say that nearly, if not all species of fish are subject to parasitic worms or grubs during warm weather, and sometimes at other seasons of the year. These parasites are destroyed in the cooking of the fish, and are not at all injurious to the human economy. There is no doubt but we take into stroyed in the cooking of the fish, and are not at all injurious to the human economy. There is no doubt but, we take into our stomachs, with food of various kinds, thousands of parasitic creatures, some living, others destroyed in the process of cooking. If we should submit our aliment to microscopic examination, and refuse all that contained living organisms, we should all become "Tanners," for, as Swift says:

So, naturalists observe, a flea Has smaller fleas that on him prey; And these have smaller still to bite 'em; And so proceed ad infinitum."

J. A. HENSHALL.

How to Dress Black Bass and Pickerel.—St. Joseph, Mich., Oct. 17.—About everything has been written on block bass but how to dress them. I will tell you how I do it. Take a thin, old case-knife made sharp (a file is the best to sharpen anything but a tazor); begin at the tail and run to and from you a quick, sharp stroke just under the scales and not too near to the meat. That leaves a thin white membrane or skin on the meat and takes off all scales and black skin. The skill will soon he acquired. It takes off all the black, and when cooked takes away all marshy taste. I dress pickerel the same way. Now let our piscatorial brethrentry, it, and I pledge my word they will not scrape scales any more if they have been in the habit of doing it. Brethren, try it.

Ax Eleven-round Trout—Bethel, Maine, Oct. 1.—The close season for trout is now upon us, and hundreds of sportsmen are now returning to their homes from the Oxford County lakes. The catch of large brook trout has been very fair, and in most cases satisfactory; although some parties have been disappointed, yet others have carried home many beautiful specimens of the largest Saimo fontiands in the world. The largest specimen known to be caught and weighed was carried home by a Mr. Marble, of Boston; weight, eleven pounds. Many more of the weight of ten, nine, eight and less pounds were taken at upper dam, foot of Mooslamaguntic. Trout of the largest size could, and can now, be seen readily by any one on and near their spawning grounds, but they charily rise to a fly. The most of those taken are baited with spawn, although many parties will not deviate from the more sportsman-like way of fly, hook and delicate rigging. Game of larger and smaller kinds abound in these regions, and the mountains are gorgeous in fall follage, forming a fitting tubleau to the closing up of the enjoyments of a successful senson.

A. G. Rion.

SALMO WILMOII.—Montreal, Canada, Oct.—What about the name of the author of Salmo wilmoti? It is the duty of

your correspondent "B.," who boldly answered my prior statement, to elucidate this matter. I am anxious to know more about this fish and its habits, especially as there is a statement made that being confined to Lake Ontario it visits salt springs within the lake. I cannot find a person to corroborate this assertion, and I look on it as absurd. Forty-five specimens of twenty-six species of stuffed fishes were hung up by me at our late exhibition. My fishes are placed on boards to hang from the wall like pictures. In this way they are preferable for museum purposes. The collection of fishes exhibited by me last year at Ottawa, Ont., were purchased by Dr. Sterry Hunt, the celebrated chemist, for McGill University Museum. Canadians give but little encouragement to natural science, hence this branch of the art suffers. suffers

The control of the newly appointed Game Protectors of New York has entered upon his duties in a fearless manner, and in a recent raid on the gill nets in Cayuga Lake destroyed forty of them. The Rochester Express, from which we get the news, says:—"State game constable, George M. Schwartz, returned to-day from a successful expedition on Cayuga Lake, for which place he left here on Weinbeady. It had been surmised that a good deal of illegal fishing was being done in Cayuga Lake. The constable chartered a steamer at Penn Yan last evening and made a tour up the lake to Haumandsport with grappling irons dragging in the water. The result was that over forty gill nets were drawn to the surface. These were destroyed. A good haul."

Size of Black Bass.—St. Joseph, Mich., Oct. 17.—I see in number Oct. 14 you express doubts of black bass exceeding four pounds weight. If you will come here we will take you out where you can take and see taken several in a day, genuine Micropherus salmordes (Microstoma) that will weigh from four and a half to five pounds. There has been near a dozen taken here the past week that went four to five and a half pounds. We never catch any Megastoma that go over four pounds probably. I frequently hear of the Microstoma being caught weighing seven and eight pounds.

Lutrox. one over six to seven pounds.

The Largest Halibut.—The Cape Ann Advertiser, in giving the record of the largest halibut, says :

ing the record of the largest halibut, says:

Last week we published a statement that a 'halibut weighing 377 pounds, landed by sch. Wachusett, was the largest ever hinded. This is trues of ar as Bank halibut are concerned, but Capt. William H. Oakes comes to the front and states that in 1872 he purchased a halibut brought in from Georges, which weighed 447 pounds. He telegraphed to Boston and sold him, and the monster attracted much attention in the market. A halibut was landed at the New England Fish Company's wharf a few years since which weighed 368 pounds.

### THE VELOCITY OF SHOT

EXPERIMENTS GIVING DIRECT MEASURES OF THE TIME OF FLIGHT OF FOWLING PIECE SHOT OF VARIOUS SIZES Over Various Distances, With Remarks on the Ar-PLICATION OF THESE MEASURES TO THE ART OF SHOOTING ON THE WING.

By Alexen M. Mayer, Professor of Physics in the Stevens Institute of Technology, Hoboken, New Jersey.

Read before the American Association for the Advancement of

Science, at Roston, on August 31, 1889.]

A BOUT a year ago I determined to make a series of experiments with an undeniably accurate chronoscope, which would give direct measures of the velocity of fowling-piece shot of various sizes. At that time I was not aware that any determinations of this kind had ever been made, though similar ones on the velocities of the balls of ordnance and rilles were numerous. Thus I began my work entirely free from preconceived ideas as to what the experiments would roveal. It was only toward the end of my work, when on a visit to my friend Professor Idice, of the United States Naval Academy, that the Professor told me that he had made a short series of similar experiments with a Le Boulangé chronoscope, and had published them in the Ron ANY GNY in July, 1873. This paper I then read, and I here reprint it as an appendix to my paper. My attention has subsequently been called to the works of other experimenters in the same direction; of them I have taken references, but have purposely wholed

them I have taken references, but have purposely avoided reading them.

I have made this preamble to my paper to show that my experiments are to be taken as entirely independent of other similar work, for I was not guided nor influenced during my experimenting by a knowledge which might cause me to reject certain experiments as erroneous because they did not give results which I had thought they should have given; for no matter how conscientious an experimenter may be, he is sometimes influenced by preconceived notions, and unwittingly desires his experiments to bring out certain results. I

have always in my work endeavored to avoid this mental prejudice, and have therefore, whenever possible, worked in this manner: viz., I write down the numbers given by the experiments as they are successively made, and do not reduce or compare them till after the whole series has been finished. The reader will therefore find in my results apparent anomalies, even contradictions, or, if you please, absurdities. These anomalies are those numbers which always catch the eye of him who does not know, from experience, the difficulties and exhausting toil of a protracted series of delicate experiments; and on these anomalies he will dwell to the exclusion of what, in the main, the experiment conclusively show. To such I say, with the experiment of twenty-five years of experimenting: Make the experiments for yourself and do better, and for your better work science will be indebted and will surely credit you with your superior skill and patience. Each experimental investigation is a step in progress to something better; but without the first step is made the firmer tread will not be exained. Urst be promiter pas put cont.

Kature, however, does not work in an anomalous, contradictory or absurd manner. These anomalies are of our own production, and are due either to the errors of the apparatus we use, or to certain peculiar actions in the phenomena which accompany those we are particularly studying. The apparatus detects and measures both of these classes of actions, and it is the office of the investigator, after his experiments have been finished. Its unravel one from the other. Thus, for example

we use, or to certain peculiar actions in the patenoinant when accompany those we are particularly studying. The apparatus detects and measures both of these classes of actions, and it is the office of the investigator, after his experiments have been finished, to unravel one from the office. Thus, for example, in the flight of shot we have many moving pellets, and they do not all move with the same velocity. No apparatus known can give the velocity of each pellet in a charge so that we may therefrom deduce the average velocity of the charge. So it happens that with charges of large shot, when you have fewer pellets, and especially when these charges are shot over great distances, some pellets of high speed may strike the target and record their velocity, while in the next experiment, pellets with lower velocity may record themselves; and this will unavoidably happen, no matter how accurately we hold the gun on to the target. But these very differences shown in the time of flight of the various pellets point out an interesting and important fact; showing that such work as we have begun requires a long time for its completion, for the measures of the velocities of many charges of the same weight of powder and shot must be made to get the average velocity of all the pellets. It may be here asked why I did not do this. To this question I reply that I cannot afford to give a year of time to make the first step in this subject of investigation. A rich field I have pointed out for other experimentes to enter; and I trust that since our large American arms manufacturers are now making fowling-pieces they will devote a mite of their profits to just such investigations as this one, on which I have spent much of my though, time and private means the records of the apparatus itself can easily be investigation which in what may be shown in the experiments afor these experiments are those which these experiments slow, and not what may be shown in the experiments of others. I give these experiments

The additions which I make from these experiments are those which these experiments show, and not what may be shown in the experiments of others. I give these experiments of mine as entirely independent evidence on the subject of the velocity of shot, and of course my readers may give them just as little or as great weight as their individual judgments may determine. That they have been conscientiously and carefully made no one will doubt who has had any experience in the use of chronoscopes used in measuring the velocity of

in the use of chromosorpes accountry projectiles.

I do not think that the sportsman and experimental physicist are often found in one person, even in this country—still less in Europe. From my youth I have been devoted to every-thing relating to the gun, and this experience has, I presume, given me an advantage in this investigation over other physicists. I had also the good fortune to have had a brother exist. I and also the good fortune to have had a brother manner of the projection and experimenter for my assistant—Professor B. casts. That and experimenter for my assistant—Professor B. F. Thomas, now of the University of Missouri—who entered enthusiastically into this work, adding me with his ingenuity as an experimenter and with his suggestions derived from his extensive experience as a sportsuan.

Description of the Chronoscope and a Determination of the Magnitude of the Error in its Results.

The chronoscope used in these experiments is very simple. It consists of a metal cylinder turning on an axle on which is cut a sercw. This serew moves in a stationary nut, and this arrangement gives the cylinder a lateral motion when it is revolved on its axle. The cylinder is covered with the printing paper, which is then smoked with burning camphor. A tuning-fork is serewed into one end of a thick piece of numgatork is screwed into one end of a thick piece of wood is hinged on to a base. To the end of this piece of wood is hinged on to a base. To the end of one of the prongs of the fork is cemented with shellac a small triangular piece of foll. The fork is vibrated by a bow, and then the binged board is brought down against a stop so adjusted that the point of the foll on the fork just touches the smoked paper. On now turning the cylinder a wavy trace will be written on it by the vibrations of the fork.

ngainst a stop so aujusted that the provided rate of the fork just touches the smoked paper. On now turning the cylinder a wavy trace will be written on it by the ribrations of the fork.

To determine the number of vibrations made in one second by the fork, a good clock, accurately rated, sent at each second an electric spark from an induction coil out of the tracing point and through the paper. Thus the simoust traces of the fork were punctured by electric sparks. The number of waves of the fork's trace contained between two of these punctures is the number of vibrations made by the fork in one second. A multifude of experiments showed that the range of the determination of the number of vibrations per second of the fork was very small, and the means of several such measures did not vary from one another by more than 1-10th of a vibration, or, expressed in time, the variation did not surpass the 1-25600th of a second. This fact showed that the chronoscope, so far as its records were concerned, was sufficiently constant and accurate for measures on the velocity of projectiles.

sunciently constant and accurate for measures on the velocity of projectiles.

The effect of temperature on the virtutory period of the fork had been determined in a previous research. It amounts to an increase of .000045 of the periodic time of the fork's vibation for an increase of 1 deg. Pahr. in the temperature of

That no for an increase of 1 deg. Fair. in the temperature of the fork.

The gims used in the experiments had rebounding locks. The primary current of an induction coil passed through a break-piece fixed under the rebounding hammer, so that at the instant the cartridge was exploded the electric current was broken and then immediately formed again. The current which passed through this break-piece was led by a wire to an upright piece of tin plate whose front surface leaned against a thick copper wire. Another wire led from the tin plate (which stood in a shallow trough of mercury) back to the battery. One terminal of the secondary soil of the inductorium is connected with the axis of the metal cylinder, the other terminal with the foot of the fork.

This chronoscope is worked as follows: One person vibrates

the fork with a bow, and then brings the pointed foil down on the smoked paper, and rotates the cylinder. While the fork is marking lis sinuous trace he cries "fire," and the other person discharges the gan at the tin plate. At the instant the cartridge explodes a minute spark issues from the tracing point of the fork and cuts a small bole through the blackened paper in the sinuous trace of the fork, and when the tin plate is knocked over by the shot another similar spark flies from the treating point. the tracing point.

is knocked over by the shot another similar spark lines from the tracing point.

We know the distance between the breach of the gun and the tin plate, the number of flexures in the trace of the fork contained between the two spark holes gives the time the shot took to go over the known distance, whence the velocity of the shot per second is readily computed.

The fork used in these experiments made about 256 vibrations, or flexures, in the trace in one second; so if there should appear 32 flexures between the two spark holes the record would give 82-250th, or one-gight of a second for the time of flight of the shot from the gun to the distant target. Two guns were used in these experiments, one of 12 the other of 10 gauge. They were "full choke-bored," and were choked exactly alike. They were made by the Colt Arms Manufacturing Co., of Hartford, Ct.

The following tables give the results of our experiments:

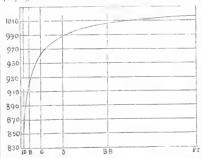

1, 10 (Cd gun, 5 drs. Curtis & Harvey powder, 1), oz. shot.

Harvey's Diamond Concerning the Action of the Concerning from the

The divisions on the scale, measured from the bottom line The drysions on the scale, measured from the outloom line upward, give the velocity per second of the pellets. One unit on this scale equals 29 feet of flight of a pellet, and a unit of the scale measured from right to left on the diagram, equals one unit of weight of pellet. The weight of a pellet of No. 10 shot is here taken as the unit of weight. The numof Ao. 10 snot is nere taken as the unit of weight. The numbers of the shot are written under the horizontal line; the velocities on the vertical line. When the curve intersects these lines we find the velocity given on the vertical scale corresponding to the number or weight of shot given on the horizontal line of the diagram.

zontal line of the diagram.

Professor Rice has found that this curve can be expressed
by a mathematical formula. The curve is very nearly the
curve of secants, and the formula for it is:

$$\frac{y}{h} = \frac{-1}{\text{Sec.}} \frac{x - nth}{a}$$

Denoting by x the velocity, by y the weight of a pellet, and a, b and a being undetermined constants.

This may interest if not unuse some of my readers who may remember a little of their mathematics. But the thought that shooting by mathematics will be found very unprofitable may console those sportsemen who have had the pleasure to forget all the formula they had ever learned.

So far as the experiments with these two special guns show, there is no doubt a great superiority in the 10 over the 12-gauge

gun, when each is loaded with the same weight of powder and shot. Thus, with the same charges of powder and shot (4 drs. powder and  $1\frac{1}{9}$  oz. shot) fired from the 10-gauge, gives a relocity of 100 feet per second more than that given by the 12-gauge. The fact is conclusively shown in the comp rison of the figures in the two tables headed "10 Colt gan, 4 drs. C. & H. powder and 14 oz. shot," and 12 Colt gan, 4 drs. C. & H. powder, 14 oz. shot," and 12 Colt gan, 4 drs. C. & H. powder, 14 oz. shot," and the difference in velocity in favor of the 10-gauge was in each of the sixty separate experiments, which were made to get the numbers (contained in the above mentioned tables) on the lines of No. 8 and No. 12-gauge.

in the above mentioned tables) on the lines of No. 8 and No. 10 shot.

With No. 10 shot the mean velocity given by the 10-gauge gun over the first 30 yards is 848 feet. With the same charge in the 12-gauge the velocity is 748 feet, showing a difference of 100 feet in favor of the 10-gauge. With No. 8 shot the difference amounts to 72 feet. The average difference in favor of the 10-gauge in the flight of shot Nos. 8 and 10 over 40 yards amounts to 110 feet.

If we assume, as we certainly may without grave error, that the penetration of shot varies as the square of its velocity, these experiments will give the relative penetrations of the 10 to the 12-gauge about as 9 is to 7. These experiments show that the recent movement in favor of small-hore guns is one in the wrong direction. It appears that a 10, or even an 8-gauge gun, if of about 818s, weight, would be the best fowling-piece for upland shooting.

That the 10-gauge shows such superiority over the 12 may be accounted for by the fact that the same charge occupies less length in a 10 than it does in a 12-bore, and hence there are fewer pelleds in contact with the barrel of the former than of the latter to oppose by their friction the projectile force of the powder; and secondly, the powder in a 10-gauge is exploded nearer the centre of its volume, and thus does not have so much chance of blasting before it unburnt powder contained in the portion of the charge removed from the point of signition.

I also venture to predict that with the same weight of

point of ignition.

I also venture
barrels the 10-gau point of ignition.

I also venture to predict that with the same weight of barrels the 10-gauge will not heat us much as the 12, because the motion of the shot lost by the greater resistance it opposes in a 12-gauge cartridge, must appear in the form of

meat. The third fact which these experiments show is that the proper charge of shot in a 12-gauge gun for upland shooting is 1½ oz. and not 1½ oz., as has of late years been the practice to use; for the tables show that with 1½ oz. of shot and 3½ drs. of powder an average velocity is obtained which requires 4 drs. of powder to give 1½ of shot a velocity equal to that given by 3½ drs. to 1½ oz. Now, 4 drs. of powder, if not fired from a gond weighing at least 9 lbs., and from a good, strong, muscular shoulder, is disagrecable. The effect on the body, and especially on the brain, is neither conducive to pleasant nor to good shooting. The number of pellets in a charge of 1½ oz. of the same shot there are 419, therefore only 50 pellets more in a charge of 1½ oz. than in a charge of 1½ oz. can desired the charge of 1½ oz. than in a charge of 1½ oz. than in a charge of 1½ oz. in this bird with 449 pellets, nor will the addition of the 50 give a bad shot any more chance of bringing his bird to bag with his 499 pellets. The third fact which these experiments show is that the

a mat shot any more chance or unigning institute ones with its 499 pellow to show to the association, and especially to those members of it who are sportsmen, other applications of these experiments to the art of shooting on the wing.

There are two styles of shooting on the wing—one is called "snap-shooting," where the shooter, on selecting the bird which he wiskes to bag, quickly brings the gun to his shoulder and at the instant it is in place, fires. If the bird is a cross shot, he determines at the moment of fire the distance to which he should direct his gun ahead of its flight, this distance depending on the velocity of the bird's flight and on his distance from it. This manner of shooting is practiced the more generally by uphand gunners in shooting quail, grouse and woodcock.

The other style of shooting may be designated as "the

hore generally by upland gunners in shooting quail, grouse and woodcock.

The other style of shooting may be designated as "the swing shot," in which the gunner swings his gun ahead of the cross flight of the bird till he attnins the proper distance ahead of it, and then fires; but he keeps his gun moving with a regular angular velocity till even after its discharge. This method of shooting is, in my opinion and from my experience, the proper method whenever it can be practiced, and is certainly the only one which has been found successful in the shooting of bay flowl, as ducks, brant and wild geese. Yet there are sportsmen who will contend that they merely follow the bird with the gun, and discharge it while it is pointing directly at the bird. I put this opinion to the test his summer in the following manner: Four willets came over the decoys flying in line with a good speed. With my gun I followed the first bird coolly and accurately, and kept the gun moving regularly after its discharge. Instead of killing the first bird, the third from the leader dropped dead.

To give a rule applicable to all gunners for the distance at

killing the first bird, the third from the leader dropped dead. To give a rule applicable to all gunners for the distance at which a gun should be held ahead of a bird is not possible. Some sportsmen follow a bird, and then after reaching before it the proper distance, suddenly stop the angular motion of the gun and then fire. Others, after following the bird a short distance, give a quick, lateral motion to the gun and then fire. Others, again, bring the gun with a lateral motion ahead of the bird and keep the gun moving till their experience decides the proper distance alterad of its flight, and then fire while the gun is keeping its previous regular angular velocity.

relocity.

For the simple illustration of the bearing of these experiments on the art of shooting on the wing I will suppose that at the moment of fire the gun is stationary; in other words, that we are fring "snap shots." If the bird has a velocity across the line of sight of 30 miles an hour (i. e., 44ft, per sec.), and we are using charges in a 12-gauge gun of 3½ drs. of Curtis & Harvey powder and 1½ oz. of shot, we will have to shoot about 5 feet ahead of the bird if it is thying ar a distance of 30 yards, at 7 feet ahead if at a distance of 40 yards, and 11 feet ahead of the bird if at a distance of 50 yards.

yards, and 11 feet ahead of the bird if at a distance of 50 yards.

These distances ahead for cross shots at birds flying at the rate of 30 miles an hour may appear out of all reason with the experience of many sportsmen; yet if you will place a slick 5 feet long at 40 yards and ask the same gunners if they would hold ahead of a bird by that length if it were going with a velocity of 80 miles. I venture to say, from my experiments with them, that they will say, "Of course; that is only about 18 inches," so difficult is it to determine a length at a distance while sighting along the barrel of a gun.

I will conclude with the remark that the study of this paper will not make a good shot on the wing, no more than a description of how to perform on the violin will make an accomplished violinist. But the results of these experiments are of value, and cannot but improve the shooting of an accomplished sportsman if they are practically applied.

If has been said, perhaps rather strongly, "reading and

writing come of schoolmasters, but a crack shot is the work of God "

### [From the Rod and Gun, July 31, 1875.] THE VELOCITY OF SHOT.

BY J. M. BICE, PROF. MATHEMATICS, G. S. N

BIRD at the distance of forty yards is going at A BIRD at the distance of forty yards is going at full speed (say sixty miles per hour) in a direction perpendicular to the plane of fire; how much shall we hold ahead? It is difficult to find two good shots who will give even approximately the same answer to this question; there are those who will say they allow little or nothing, and others who allow from tea to fitteen feet.

It is obvious that before we can discuss this question to

It is obvious that before we can discuss this question to any purpose we must know approximately the velocity of a charge of shot. It is hoped, therefore, that the following experiments will be of interest to sportsmen.

These experiments were made on the 27th of June last, at the U. S. Naval Experimental Battery at Annapolis, Maryland, with the permission and able assistance of Commander Joseph D. Marvin, U. S. Navy, in charge of the Battery. The instrument used to determine the velocities was a Le Boulenge Chronograph; the gun, which was fired from the shoulder, was a pin-fire breech-loader, No. 12 gauge, thirty-inch barrels, weighing seven and a half pounds.

The chronograph was manipulated, and the observations were taken by Lieut, W. W. Kimball, U. S. Navy, assistant to Commodore Marvin.

The cartridges were not prepared for experimental purposes, but were such as the writer happened to have loaded at the time the experiments were made.

poses, but were such as the writer happened to have loaded at the time the experiments were made.

In the table below, H denotes Hazards Electric Powder, No. 5 grain, and D denotes Phopout's Ducking Powder.

The column headed Range gives the distance between the two screens, one of which was about six inches from the muzzle of the gun.

muzzle of the gun.

The velocity given is the mean velocity of the shot between the two screens. When the range is fifty feet, it may be taken as the velocity at 25 feet from the nuzzle of the gun; and when the range is 100 feet, at 50 feet from the muzzle.

The first screen consisted of four very fine copper wires placed vertically about half an inch apart; the second screen was about the size of a sheet of common note paper, and was formed of time copper wire stretched from side to side at intervals of about one-fourth of an inch.

By the property of the bird, by jerking the ground or exceeding sixty miles at the classes of a duck pages and the form that at the which eight will be 1.115 sec. A bird lifting at the rate of 60 miles an hour goes at the rate of 88 ft, per second, the time of flight will be 1.115 sec. A bird lifting at the rate of 60 miles an hour goes at the rate of 88 ft, per second, or 13.2 ft, in 0.15 seconds. Again, if we assume the mean velocity of shot for forty yards to be 1,000 ft, per second, the time of flight will be 0.12 seconds, and the distance traversed by the bird, 10.36 ft.

Ducks, when going at full speed, attain a velocity exceeding sixty miles an hour; it would therefore seem that an albwance of 10 or 15 feet, in the case of a duck passing a point under full headway, is not too much, if the distance equal or exceed 35 yards.

Some successful sportsmen have a habit of making an allowance for the velocity of the bird, by jerking the gun forward at the instant they pull the trigger. The time which elapses between the instant at which the hincestage which causes the finger to pull the trigger is sent from the brain, and the instant at which the shot leaves the muzzle of the piece is finite, and doubtless greater than we are apt to suppose. This interval of time probably varies with different individuals; hence arises a larger personal equation. For this and other reasons it is impossible to frame rules which are equally applicable to all sportsmen. Each, if be would shoot well, must make his own rules, which must be carefully modified to accord with his experience and observation. A tolerably accurate knowledge of the velocity of shot is, notwithstandling, of great service to the thoughful sportsman.

In these experiments, the time of flight was such as to per-

servation. Servation of great service to the thoughtun sportsman.

In these experiments, the time of flight was such as to permit the shot to fall about four inches in going one hundred feet, a distance which is of little importance in comparison with the distance traversed by the bird while the shot is in the air. In the case of most double guns the elevation of the rib at the breech is more than sufficient to compensate for the distance through which the shot will fall in going forty yards. A sight one-tenth of an inch in height, at thirty inches from the eye, will exactly cover a line four inches in length at a distance of one hundred feet. The elevation of the rib of most double guns is greater than one-tenth of an inch.

T. M. Rice.

inch.
U. S. Naval Academy, July, 1875.

### GEESE HUNTING IN THE STUBBLE FIELDS.

THIS is undoubtedly one of the most exciting kinds of shooting a sportsman can engage in. It requires a good stol as well as a hard shooting gun, and he who takes a light weight to the field will not have a heavy beg, but will have a black and blue shoulder and a crazy head instead. In company with a fellow sportsman we set out with camping outfits, boat, etc., not forgetting our retriever for the ones that sometimes fall just where we could not find them. Arriving at our destination we have our team well cared for, and then taking our decoys we proceed to business—i.e., digging holes in the ground, where we could command a broad view of the surrounding country. All being in readlness, our decoys placed in such a way as to be seen from any point of the compass, we settle "comfortably" back on our seats which we place in the holes, and wait.

In a short time a large flock of geess are seen approaching our quarter. Yes, here they come, for we now hear their sonorous "honking," which makes us "all of a tremble;" and yet we want them to pay us the call. They espy our elever initiations and renew their call, at the same time coming still closer. I now cock both barrels, and as they come within range I let loose, "first the right and then the left," with the satisfaction of seeing the first four old honkers sink to earth and three more quickly follow. They came back

for another shot, but were too far away for my gunfellow sportsman (?) stood with loaded gun, looking at "Why didn't you fire?" "I was just going to when shot, and then I thought you had killed the whole flock there would be no use for me to waste my powder on dead

geese!"
This was not our last sport, for many a time did we send a storm of chilled shot after some wary old gander with splendid success. We hunt for market as well as for the pleasure the sport affords. The place to shoot these splendid game birds is well known to a large number of St. Paul sportsmen, who make annual visits here, and, strange to say, never go heare dispured in the properties of the prop

birds is well known to a large number of St. Paul sportsmen, who make annual visits here, and, strange to say, never go home disappointed.

Probably the best place to shoot over decoys is Westport Lake, about ten miles from Sauk Center, where they congregate in large numbers, taking the stubble fields at early dawn and evening, returning to the lake after breaklast and supper.

Goose Lake is situated in the southeast corner of Douglass County, and its adjacent fields make it a splendid place for the "wild fowler" to recreate about.

A person can reach any of the above named places at the prices named below, which include nearly everything needed in the sport. Pare from St. Paul to Sauk Center, S4.50; team and driver to take you out, per day \$2.00 to \$3.00; board at Sank Centre House per week, \$4.00 to \$5.00; for a good breech-loader per day, \$2.00; boat at the lake per day, \$2.00; to Sank Centre House per week, \$4.00 to \$5.00; for a good breech-loader per day, \$2.00; boat at the lake per day, \$2.00; boat at when the same and the pleasure of ducking there in company with Mr. L., who is a true sportsman and a capital shot; always full of fun and the funny.

A terrible snowstorm has been rading for two or three days, and at present writing the snow is from two to five feet deep in places, with some crust. If this continues for a day or two longer pinnated grouss will be entirely exterminated in this section. The geese and ducks have disappeared but will return if it turns warmer. This is the worst storm that the oldest settlers have ever witnessed at this season of the year.

#### ----PHILADELPHIA LETTER.

CINCE last writing the different varieties of wild duck which generally follow the early coming teal have made their appearance in our river. Although not numerous, black duck, a few mallard, and what is called by our local "gunners" the stiff tail (ruddy duck) have been shot in Howell's Cove, Delaware River, a few miles below the city. They are secured by paddling on the flocks, but, we learn, are averaging the statement of the statement of the security of the statement of the security of

black duck, a few mullard, and what is called by our local "gumners" the stiff tail (ruddy duck) have been shot in Howell's Cove, Delaware River, a few miles below the city. They are secured by paddling on the flocks, but, we learn, are extremely shy.

Oct. 15 presented a very busy appearance at our gun stores, the day being the opening of the quail senson. Judgling from the quantity of shells ordered, sad havoe will be made in the ranks of Bob White, provided the covies this summer-like weather do not find food enough in the yet verdant woods and thickets (which we are sure they will) and take to the stubbles for their morning meal. Your correspondent has always noted that until cool weather has stripped the trees of their foliage and destroyed or covered the food usually found in the woods, the quail will not go to the stubbles, or at least if he does keeps close to his "branch" or thicket. In these days of improved breehoaders and increased number of sportsmen Bob White has learned to be wise. How often bave I patiently waited until the over-auxious "season openers" have returned from their first campaign, reporting no birds, plenty of musquitoes and warm weather, (fully knowing the cause of the apparent dearth as I have intimated there will be this October, in regions where ample quail have been bred, and which, later, will be found to furnish capital sport) and going to the same grounds had good shooting.

Delaware and Maryland buyers who have been in our city during the past week tell me an average number of birds have been bred in their States. A law lately passed in Delaware requires non-resident shooters coming to the State to be furnished with a license to be paid yearly. This in a measure protects the farmers from the chicken-killing and fencedstroying "gunners" that overrun the country when the state, insist upon the same tleense, and although we are of the opinion the law would be found unconstitutional if properly tested, we cannot help favoring it on account of the state, insist upon the same lie

dogs should be sent to N. Y., if sent to this country at all, and disposed of at auction.

Doubtless these animals cannot be from the best English kennels, as dogs of well-known breeds do notso go a begging, and I so stated it, discouraging the enterprise as much as possible. If we want English blood we wish the best, such as have been imported already by our enterprising sportsmen, as many curs may be found there as here.

As a part of my weekly letter to Forest and Stream I incorporate a communication from our friend "Hawk Eye," relative to his first shoot of the season, and giving his opinion regarding the present early opening:

"Priend 'Homo." Every sportsman in this valley (Lehigh, Pa.), will agree with you upon the point you raise against the shooting of quali in October; at least, all those who have been out this fail. It is a scandalous shame to kill such birds as I found on Friday last; they were not more than about half-grown. The first bunch we canno across could scarcely fly. I walked in alread of my dog, saw something slip through the briars, and was about to flog him for standing mice, when one of the old birds rose and some half-dozen "squeders" undertook to follow, but they made such a poor attempt to get on the wing Jast the old bird lit again within gun shot, and commenced calling them to her in that plaintive note we so frequently hear in the harvest fields when the great destroyer of her qualit, the mower and reaper, goes through a brood of the noor little leptless thines. I ceilled my dog and valked away quently hear in the harvest fields when the great destroyer of her quail, the mower and reaper, goes through a brood of the poor little helpless things. I culled my dog and walked away without firing a shot. It was too much like murder to shoot the old bird when the young were hardly able to take care of themselves. This I did more than once during the day, as the majority of the birds were too small to shoot, and I am fully of your opinion that the season should not commence until November I. There are more late broods this season in our part of the country that I ever saw before. How do you ac-

count for it? Like you, I shall not do any more quail shooting until later, when the birds can fly: there is no pleasure now, they will not lie for a dog, and are ractually not worth carrying when you get them. I think something should be done when the Legislature meets to prevent the wholesale murder of birds, before they can fly, by 'pot hunters,' for I do not think any sportsman would be mean enough to carry home such birds as I saw on the opening of the season this year as the law now stands. Write the matter up in the F. and S. and get the views of others upon it. There is another point that can be made in reference to Oct. shooting. Aslongas we are fifteen days carlier in this state them in some adjoining ones we may expect to be run down with a class of men who shoot for the market and have no other interest in our game birds, and still another class who want and will have a big count of heads and tails, no matter how small they are. I have often thought it was bad policy to have 'pheasants,' or ruffed grouse, come in before quail, for this reason: Parties go out under the pretense of shooting pheasants and woodcock, and shoot quali right along after October 1, because they think and say to themselves, 'Oh, well, it is only a few days to the fifteenth, and if we do not get them this will be my only chance.' There is actually little or no pleasure in shooting grouse before the leaves are off the trees and the birds come in from the flats or barrens where they are now feeding on herries. As soon as we have some cold snaps they will be found in winter quarters, along water-courses and in the ravines. You can't find them there now. I have not seen over a half-dozen this fall while shooting woodcock on grounds where there will be good grous shooting later in the season.'

Your correspondent can assure the readers of the F. and S. that the communication quoted is from the pen of a sportsman thoroughly able to speak on the subject on which he wites, and I am pleased to state he will regularly furnish interestin

#### MICHIGAN NOTES.

Cheboygan, Mich., Oct. 16.

WE are having very good shooting in this county at present. Ducks, partridges, deer and bear in abun-

E are having very good shooting in this county at dance.

The hest duck shooting we have is at the head of Mullet Lake, about eighteen miles from town, and Black Lake, about the same distance in another direction. Mullet Lake is a beautiful sheet of water, twelve miles long and six miles wide, and Black Lake is eight miles long and about three miles wide, and Black Lake is eight miles long and about three miles wide, and Black Lake is eight miles long and about three miles wide, and Black Lake is eight miles long and about three miles wide as open did cover for sportsmen. There are good accommodations at the Mullet Lake House, with boats and everything necessary to make a trip both pleasant and profitable. The boats are managed by H. W. Hodge, one of the best duck hunters in the State. Five members of our Gun Club and a Mr. Stanton, of Detroit, madea trip to the head of Mullet Lake last week, and in six hours bagged left ducks. There is good partridge shooting within a few rods of the Mullet Lake Ilouse, and within three miles from the lake, between Pigeon and Sturgeon rivers, there is as good deer shooting as a person would wish, with an occasional chance at a bear. There is a daily line of loats between Petoskey and Cheboygan, calling at the Mullet Lake House from each way.

We have had some very fine sport during the past two weeks shooting plover. There were a great many flocks on the grain fields, and we had fine sport for a few days. They are all gone now and we have turned our attention to duck shooting. A few of the members of the club are getting ready to go over to the Sneaux Islands, about wenty target extent, and the shooting is many times extraordinarily fine. A present our meat markets are steeled with venison and bear meat that has been sent in from parties who have been out hunting for the past two weeks. If sportsmen visiting this place will make themselves known to any members of our club they will be khadly dealt with, and will be posted on the best places for shooting in the country. I will

### MAINE CAMPING GROUNDS.

New York, Oct. 23, 1880.

Editor Forest and Stream:

We notice "Lower Bunk's" note in your issue of the 21st in regard to a good camping place in Maine, cost of reaching it from Hartford, etc. Will give you some information for him in crude form for you to present in your own way. The headwaters of the Penobscot afford all that "Lower Bunk" desires. He can reach Houlton, Arosstook Cu., Maine, at a cost of not over \$15, the cars running to within a very short distance of the town. He can make Phillbrick's Hotel his headquarters for a day or two till be makes arrangements to move into the woods. At this season of the year large numbers of lumbermen are being sent into the woods to cut roads, repair dams, build camp and hovels, etc., and he could get his baggage and provisions, which he can buy very cheap in Houlton, taken in by them very cheaply.

Among many favorable places to be reached from this point we might mention the headwaters of "Jimmy Brook"—a branch of Penobscot. It lies some twenty miles southwest of Houlton in a heavy timbered tract of pine, spruce and hardwood. Along the course of Jinny Brook for many miles are a succession of dams erected by lumbermen, through which immense pine logs are "sulced." Joining deep holes below the dams, abounding with fine trout, which can be caught in proper season. Partridees are very abundant. [Mink and sable are also quite plentiful along this stream and can be readily trapped by rude "dead falls." Moose are plentiful, but are hard to get at. In order to meet with good success in striking moose it is very necessary to employ as guide an Indian or some old hunter, who can be found amone the lumber camps which abound along the streams.

MAINE—Solon, Oct. 23.—The Latlang Beanout & Co.

MAINE—Solon, Oct. 23.—The best place in Maine would be hard to find, but there are plenty of nice places to camp out. Probably up the Kennebee River would be as good place as there is in the State. Moxie Pond is a good place it is six miles from The Forks. The Forks is 45 miles from Skow-

hegan, 'the terminus of the Maine Central R. R. Stages every day to The Forks. Stage fare, \$3 from Skowhegan to The Forks. Expenses is hard to estimate. The first time 1 went alishing I was gone eighteen days, and my expenses were a little over five dollars. "Lower Bunk" and party had better take the most of their catables with them; pork, etc., they can buy in Maine. The law is on iish now. There are plenty of good ponds where game is quite plenty up this way. The further any one goes back from Carraga Roads the better hunting and fishing. If "Lower Bunk" and party come this way I could take a map and show them in five minutes plenty of good places to camp on.

E. M. G.

LAST ECHOES OF DITTMAR SPORTING POWDER.

SACKETTS HARBOR, N. Y.

Editor Forest and Stream:

I am glad you have exposed the Dittmar Powder Co. I have used the powder two years but am done with it.

E. A. P.

CHICAGO, Oct. 10

Editor Forest and Stream: CHICAGO, Oct. 10.

I read your Dittinar powder expose attentively, and I think you have done the right thing in the right way. There is no examing your conclusions.

M. D. E.

St. Louis, Mo., Oct. 19.

Editor Forest and Stream:

By your expose of the "Dittmar Powder" I confidently believe you have saved many valuable lives, and if sportsmen heed the warning there will be a large credit due you in E. H.

Hartford, Conn., Oct. 23.

Editor Forest and Stream:

I join hands with you on the raid on the Dittinar powder.

I almost blew my gun to pieces with a cartridge of it one day, and threw away the balance of my canister.

T. S. S.

PHILADELPHIA, Oct. 23.

Editor Forest and Stream :

Editor Forest and Streum:

Thanks for your timely words of warning regarding the treacherous Ditunar powder. A number of us were just going to send over to New York for a supply to last us during our annual trip West. We, however, prefer to remain intact and will order black powder instead.

E. F. H.

(From the Springfield, Mass., Vew Faaland Homestead.)

(From the Springfield, Mass, New England Homestead.)
There is young blood at the head of the Forest AND Stream now. A late stroke of enterprise is a complete expose of the alleged quality of the Ditmar powder. Mr. Carl Ditmar doubtless thinks by this time that some one at the Forestand Stream office knows as much about his business as he does himself.

Winner, Manitoba, Oct 10.

My experience with Dittmar powder has been limited, but quite enough to satisfy any ordinary man. The only time I ever used it after the first discharge it was difficult to open my gun; the second time it was more difficult, and both the heads of the shells (U. M. C.) were torn off. The third time it started the breech of my gun, and this satisfied me that either I did not know how to follow the instructions or there was something wrong with the powder. I would not use the infernal stuff at any price. Fond as I am of shooting I would rather never fire a gun again than use Dittmar powder.

C. H.

BOSTON, Mass., Oct. 22.

Editor Forest and Stream:
Some two nonths since I loaded sixty brass shells and 100 paper shells with Dittmar powder. Following instructions in reference to having the powder well confined I used a hammer to ram down the two wads over the powder. After hammer to ram down the two wads over the powder. After reading your articles in reference to Dittmar powder I concluded not to use same, and proceeded to withdraw the charges from the shells. I found the powder caked together so hard in the shells as to require digging out with some sharp instrument. I desire to ascertain if there is any danger of the powder exploding under these circumstances.

No dauger if you use ordinary care in drawing the loads

PHILADELPHIA, A. P. P. P. Editor Forest and Stream:

I received the Sept. 23, Sept. 30 and Oct. 7 numbers of Forest and Stream the day before yesterday, and have been so completely absorbed in your able and satisfactory expose of the "Ditmar Sporting Powder," so called, that I have converted to the control of the property taken time to sleep. Unless this "suff" called Ditable property taken time to sleep. of the "Dittmar Sporting Powder," so called, that I have scarrely taken time to sloee. Unless this "stuff" called Dittmar powder is like the cat that is reputed to have nine distinct lives it is certainly dead for all time to come. It is impossible for me to imagine anything that you could have done that would have brought every sportsman so completely under obligations to you as the course you have taken in this matter. How I wish that I could have seen this exposition of

matter. How I wish that I could have seen this exposition of the Dittmar compound before I fired the charge that caused the loss of my hand. It is certainly the greatest fraud and the most dangerous article that has ever been placed before the public. No one can feel more grateful to you for the part you have taken in this matter than myself. Although your exposition of Mr. Dittmar's explosive was too late to prevent the almost entire loss of one of my hands (that I would not have given for all the powder that Mr. Dittmar ever had, or ever will manufacture), it will show to those sportsmen who were disposed to censure me, that I was not altogether wrong in reporting my "Disastrous Experience with Dittmar Powder." If all who have had trouble with this explosive had made a fair and faithful report of the cases with Dittmar Powder." If all who have had trouble with this explosive had made a fair and faithful report of the cases the whole thing would have been "squelched" long ago. You have taken considerable trouble to get to the bottom of the cause of these explosions with the Dittmar stuff, but when the cause of these exposions with the Dimbar stant, out when you consider that many lives and limbs (I will say nothing of valuable guns) may be saved by it, you cannot doubt but that your action will be highly appreciated by all who place any value on their lives.

It would undoubtedly have been to our immediate pecuality.

niary advantage had we acceded to the demands of the Dittmanufacturers, and, instead of impartially investigating the powder, been content with letting them cover up its character. But the FOREST AND STREAM is not prepared to evade, at any sacrifice, its plain duty to its subscribers

BLACK POWDER MIXED WITH DITTMAE.—Jersey City, Oct. 1.—Editor Forest and Stream: I perceive that Dittmar powder is coming into use to some extent in the first barrel in pigeon matches, and with good results on account of little smoke. I have used it to some extent during the past year, and found it pleasant and satisfactor? to use, but too slow in ignition to give as good results in the field or at the trap as black powder. This difficulty, I think, is entirely obviated by a mixture of say equal parts black and Dittnar to supply the sulphur in black powder to facilitate ignition throughout. It burns full as clean as pure Dittnar, gives only a moderate recoil, gives as good penetration as any (better than the pure article), and materially reduces the volume of smoke. It is for those reasons that I use it in the first barrel in all kinds of shooting, having been obliged to give up the pure article for various reasons some time since. I have been told in a discussion of the subject that priming the shell with say \(^1/2\) or \(^1/2\) dram of black powder, by putting provder (as quick or quicker than black). I have tried it once or twice, but an unable to say whether it is better or worse from my limited experiments with this. From my understanding of your exposition of the chemical action of explosives it would seem that this would increase the danger by possible detonation, although the method of action in explosion. Please give me the answer in the future discussion of the question in your paper, or otherwise your views on the action and safety of the equal mixture and the possibilities also in ease of imperfect mixing or uniformity of distribution of the different grains in the charge.

Subscriber.

The mixture of black powder with the "Dittmar Sporting Powder" quickens the explosion of the charge. Whether it increases or decreases the probability of detonation, which is always present when the nitro-cellulose compound is employed, depends largely upon the way in which the two powders are mixed. If the entire charge detonates the explosion would be more disastrous than the detonation of an entire charge of Dittmar alone. To load first black and then Dittmar above it is, as you will understand from our article of Sept. 23, extremely hazardous.

### FIRST EXPERIENCES IN BATTERY SHOOTING.

THE morning of the 20th of October, a day long and wistfully expected, broke cloudy, threatening rair, and consequently, although we had expected to start at some uncertily hour before daylight, we did not get away before six o'clock. For weeks previously our genial host and myself had narrowed down our topics of conversation to haunts, stools, fenders, boxes, floats, etc., and when we got on the ground I was very anxious to see the rig set out, my anxiety being whetted by several and repeated detonations (Dittmart) from the West. As we went down the Bay we drove up an immense flock of ducks, I should think at least seven or eight thousand, and in what seemed a wonderfully short, time my battery was out, and all the decoys, 150 of them, on the spot just vacated by the ducks. After some slight equilibrial difficulty I got into the box and lay down. By the way, or a sons dire, that all the readers of FOREST AND STREAM know all about batteries.

And now came the critical moment. I had just got nicely settled and peered cautiously over the edges of the box (how it does crick one's neck to do it!) when all at once, from the direction I was not looking in came whirr, whize, clatter.

it does crick one's neck to do it') when all at once, from the direction I was not looking in, came whirr, whizz, clatter, about a thousand broadbilts, some in front, some behind, right and left, over my head, almost into my face- I made a delirous grab for the gun and did actually manage to knock down two stragglers, but how I did it must forever remain a mystery. So it went on pretty well all day, the ducks seemed possessed to run up to the decoys and get shot——at. With an innate modesty concerning my own achievements I am rather bashful in stating my score. Suffice it to say that I bagged somewhere near half a hundred broadbills, redheads and coots. Had an experienced gunner had my chance he certainly would have got at least a couple of hundred of the sport-furnishing bipeds.

the sport-furnishing bipeds.

In conclusion, as I can never keep a cake all to myself, I In conclusion, as I can never keep a cake all to myself, I would advise every lover of the gun, so he be not of pot-hunting proclivities, to hie him hither, get in battery and shoot, shoot, shoot till his shoulder aches. There are acres of ducks here, and the new law for Shinnecock Bay, which limits the gunning to three days in the week, will certainly insure capital sport for all, and last, but not least, mine host can take care of a man.

CHALACO.

### ORANGE POWDER TRIAL.

MILBROOK, N. Y., Sept. 25, 1880.

Editor Forest and Stream:

The following is the result of an exhaustive trial of orange powder, manufactured by Laflin & Rand, with Tatham's chilled shot, conducted during the present week. The weather was remarkably fine, just enough breeze blowing to

weather was remarkably fine, just enough breeze blowing to carry away the smoke.

The targets were a counterpart of those which have been used in other gun trials—viz., "a facing of 1½ inch pine, 30 inches in width and 40 inches high, on which was fastened by spring clamps the sheet of paper for recording the 30-inch patterns. In the centre of each of these sheets was drawn a life-size tracing of a duck or pigeon, for the purpose of learning something of the probabilities of killing game of such size at the various discharges. And in the report of the trial the letter K is intended to indicate whether struck in such a manner as would insure killing, or missed. With small shot, including No. 6, the pigeon was used; with larger shot, the duck, which in outline represented a redhead. Through the centre of the facing was an aperture 7 by 9 inches, in the direct rear of which was the test for recording the striking force of the pellets, which consisted of a rack elotted at intervals of \( \frac{3}{2} \) of an inch, in which alots were placed sheets of straw-board of uniform texture and hickness. At each discharge the number of sheets perforated by

placed sheets of straw-board of uniform texture and thickness. At each discharge the number of sheets perforated by any one pellet were carefully noted, and this constituted the record of force for that particular shot."

The recoil was measured by a machine similar to that employed by the London Field some two years ago. "The gun was secured by padded clamps, tightened by thumbscrews, to a hinged slide, which was free to move only in the line of fire. To the breech of the gun a leather strap extended on either side and was fustened by means of a double wedge, which held a solid pad firmly against the heel-plate. This

leather strap took the chief strain of the recoil. Above the gun and fastened at one end to the hinged elide and at the other to the frame work of the machine was a spring balance, on the scale of which, smeared with paint, was recorded the distance to which the gun and slide were driven back by the force of the explosion, and when at rest a constant strain of sixty pounds was kept on the balance. When once in positive the strain of the gun could be loaded and fired as often as required

tion the gun could be loaded and lifed as offer as representation temporal."

The powder used was furnished by Laffin & Rand and consisted of Jorange Rifle, FG, Orange Ducking No. 2 and Orange Ducking No. 4. Tatham's childed shot Nos. 3, 4, 6, 7, 8 and 9 was used. One of W. W. Greener's new trap guns 10-bore, choked, and weighing 83 lbs., was the weapon.

ORANGE POWDER. 20 shots, 40 yards.—Summary of averages. 

throughout, and metal shells exclusively

throughout, and metal shells exclusively.

In an after trial I verified satisfactorily that between two perfectly straight cylindrical-bored guns of precisely the same gauge, there is, and can be, no difference as regards the shooting. I have given this question a great deal of time and close attention, and hope to give you at some near day a re-

I have also demonstrated to my satisfaction that Orange I have his demonstrated to my satisfaction that Orange powder has no equal, as regards strength and clembliness. I have experimented during the past six months with nearly every brand of American powder, and would send you a copy of the details if it were not for occupying so much of your valuable space.

W. J. Storx. every brand of of the details valuable space. -0--

THROUGH THE MAINE WOODS .- Mr. Thomas Sedgwick Steele's cance trips have now extended over an aggregated distance of more than 600 miles. He has just returned to his home in Hartford from a second tour through the Maine woods. We clip from the Hartford Times the following brief account of the trip:

woods. We clip from the Hartford Times the following brief account of the trip:

The party this season in addition to himself consisted of Colonel Lyman B. Goff, of Pawtucket, R. I., Mr. Steele's brother-in-law, and three guides, one of the batter the most celebrated Indian guide in the Maine regions. The tourists left the Kinco House, Mosokead Lake, with three birch canoes September 13, and reached Woodstock, New Brunswick, October 20, having paddled over four hundred miles through the very heart of Maine.

Those who are familiar with Mr. Steele's work, "Canoe and Camera," which contains the large map two feet square, can easily follow this last trip through the west branch of the Penobscot to Chesuncook lake, and thence through the Unbazookus stream, and the recounted difficulties of Mud Pond Carry to Chamberlin Lake. At this point, last year, Mr. Steele turned south, exploring the mysteries and beauties of the east brunch of the Penobscot, but this season the party followed a northerly course, through Chamberlin, Eagle and Churchill lakes. Turning directly east they canced inrough Spider Lake, crossed Osgood Curry to Echo and the Mansungun lakes, and following the windings of the Mansungun River entered the Aroostook waters. After passing the towns of Masardis and Presque Isle, they landed a Caribou, Maine, where they took cars to Woodstock, New Brunswick, and thence home. The hardest part of the trip was experienced through the swamps and over the mountains lying between Churchill and Echo lakes, which, although only fifteen miles, took the party over a week to accomplish. The season has been the driest Maine has experienced in years, and from first to last the canoeing of the stream was attended with great difficulty. On reaching the head of the Mansungun stream the party were finally obliged to camp several days and build "shoes" or sleds for the three canoes. For over thirty-five miles the canoeis more dragged through the bed of the streams before they reached sufficient depth of water to float them, mak of the season occurred September 24, while the tourists were in camp on Churchill Lake, forming ice an inch in thickness in their camp kettles and about the borders of the lake. They captured thirteen ofter, beaver and mink, hesides other game and fish. The journey was double the length of last year's, and the autumnal scenery was equally enchanting. The tourists nade several important geographical discoveries along the trip, which will be of interest here-

CARELESS HANDLING OF A GUN.—The English journals report another lamentable accident from carelessness with a gun, the victim being a soldier of high standing and a V. C

We consider it a duty to chronicle such accidents in order to impress upon each reader the possibilities which go with the habitual use of a gun. We can none of us be too careful. The following from the London Telegraph bears directly on this point :

this point:

Another lamentable gun accident is recorded, causing the death of a gallant soldier and wester of the Victoria Cross, Col. Hackett, late of the Royal Welsh Fusileers. A rabbitgun has destroyed the valued existence of a man who was present at the siege of Sebastopol, obtained the medal for the assault on the Redan, served all through the Indian mutiny, and won the badge for distinguished valor at Lucknow, where he rescued a wounded corporal of his own regiment, in spite of a heavy fire from the enemy. The deceased officer had been out rabbit-shooting, and in getting over a hedge appears to have been careless enough to drag his gun through by the barrel, whereupon the piece exploded, and its contents lodged

in his body. Only a week or two ago a similar casualty took place in India, when the son of the Lieutenant-Governor of the North-west Provinces, Sir Ashley Eden, lost his life in the same way. Taking a loaded gun, he attempted to kill a snake by thitting the reptile with the butt-end of his weapon, snake by hitting the reptile with the butt-end of his weapon, forgetting the dangerous character of the instrument he was nsing. The gun went off, and the result was another pitiful death of a man in the prime of life through the incantious handling of fire-arms. Who does not remember the deplorable accident which put an end to the career of the celebrated African traveler and explorer, Capt. Speke? Yet such casulaties ought not to occur, and would not occur if a reasonable amount of caution were exercised. Surely, in view of the sad waste of valuable life which happens every year through this cause, it is time that sportsmen and all who take a gun into their hands should remember that they are carrying sudden and violent death about with them, larking sond-where between the stock and the barrel that they handle so confidently.

A HINT TO FARMERS.—In the confessions of Fitz-Boodle A HINT TO FARMER.—In the confessions of FILE-Boodle, by the late Mr. Thackeray, he outlines a series of remunerative professions which may be made available to strengthen and fortify a slender income. To this end there is a profession open to our farmers of which they have not with any degree of intelligence devoted themselves—the cultivation of

Gunil.

Many agriculturists possess farms of one hundred acres and upward. The land is available in almost every instance to the habitst of this bird. While the average American may ignore and defy the game-law, the law forbidding trespass enjoys in his eyes a slight respect. Now if every farmer, the proseessor of land conforming to the necessary conditions, will enjoys in his eyes a slight respect. Now if every farmer, the possessor of land conforming to the necessary conditions, will encourage the propagation and protection of quail on his own premises, he will secure to himself within a brief period a most profitable crop and one which, less than any other, is subject to the vicisitudes of the weather. If he will erect suitable shelter at different points for the quail, where they may be fed and seek refuge during the storns of winter; if he will see to it that nests be not robbed and the incubating birds killed; that hawks, owls and other vermin are driven off—he will in the autumn find ample renumeration for his trivial labor. Let him but fissert in a city journal an advertisement stating that upon his grounds may be found so many quail; that individuals, for whom he will find accommodation for so much, may for so much kill so many birds per day per man, and no more, he will promptly receive a renumerative return for his efforts. Moreover, if he he a truly good man, and conform outwardly to the conventional forms required by rural ethics, he may, without loss of reputation, add still more to his revenue by putting the odds in dollars on the quail as against the sportsmen.— Gaston Fay, in Hurper's Weekly.

Weekly.

VIRGINIA— Warrenton, Oct. 20.—This fall will be a good one for the sportsman. The number of partridges and all kinds of game, thanks to a strict enforcement of the game laws, has increased enormously the last four years. From all sections of the State there comes the intelligence of good sport alicad, and in the upper part the slaughter of the birds has begun. But the late summer and intense heat of the present renders bird shooting so uncomfortable, that not until the 1st proximo will the real work begin. In all the tide-water counties of Virginia partridge shooting commences on November 1 and closes February 1. In all other sections of the State the open season is from October 15 to January 15. Gentlemen sportsmen desiring to hunt will find good quarters and fine grounds on the bottoms and low grounds of the Rappalannock River. There is no better in the State. Write to George Myers, Warrenton Springs, Fanquier Co., Va., for information. For deer hunting, quali and rabbit shooting, apply to Capt. William Blow, Littleton P. O., Sussex Co., Va. For ducks, geese, brant, Cobb's Island is the best place. Cobb and Spady can tell you all you want to know.

Sportsmen coming into Virginia are all welcome. Every

best place. Cond and spady can tell you all you want to know.

Sportsmen coming into Virginia are all welcome. Every farmer will give them full and free permission to hunt upon their lands. It is only the pot hunter that they are down upon. The Ches. & Ohio Railroad charge nothing for one dog, the second and third pay a small price. It is strange that the Virginia Midland Road does not follow this liberal example, for by charging a high tariff on pointers and setters it kills the goose that lays the golden egg, and keeps many sportsman away. It ought to be their object to induce the sportsmen to travel on their road, and to hunt all along its route; but by taxing his dog they repel thousands of huntsman annually from taking the trip. It is a penny wise pound foolish policy, for every dollar made by charging the dog they lose a hundred from their masters, who would cheerfully pay full price for themselves, but who hate to be imfully pay full price for themselves, but who hate to be im-

If play the place of the Va. Midland R. R., LATER.—The day after writing you the Va. Midland R. R., any representation, issued an order that dogs should not changed into carried free.

Chasseur. on my representation, issued be charged, but carried free.

Connectiour Notes—Windsor Locks, Conn., Oct. 25.—Partridge shooting has been dull for some time past, though there were a good many birds killed between Sept. 20 and Oct. 1. At Granby and East Granby quail shooting has been good all through the season, which did not open there until the law "went off." Quail are scattered considerably now, and cannot be found in bevis of more than six or seven, where three weeks ago the flocks had from twenty to thirty in. This is due more perhaps to boys and amateurs than to sportsmen, for the poor birds have been actually nearly seared to death. Woodcock are very scarce, a single bird being now and then raised. Gray squirrels are plenty, but are not found much in their old baunts, the scarcity of valuation of the poor birds have been actually nearly seared to death. Woodcock are very scarce, a single bird being now and then raised. Gray squirrels are plenty, but are not found much in their old baunts, the scarcity of valuation of the poor birds have been actually nearly seared to death. Woodcock are very scarce, a single bird being now and then raised. Gray squirrels are plenty, but are not found much in their old baunts, the scarcity of valuation of the poor birds have been actually nearly seared to be plenty. We have a horror of that mode of warfare. A recent visit into Litchfield County gave us some rare sport in moving and shooting partridges and quial. In two days our party moved over forty birds. We paid a visit to Green Pond, a lovely but lonesome sheet of water lying in Sherman, in Fairfield County, and had some fine times there. Mr. Charles H. Andrices, a prominent New York sportsman and fisherman, spends much time in summer there, and has a smaller pond and brook inclus niedy stocked with brook trout, and has them protected by Connecticut statutes. Mr. Andriese is an invalid, and finds much relief in that section.

Спюлео, Oct. 23.—The storm of last week started the ucks South in large numbers, and it is said that more ducks

have been seen in this vicinity than ever before in so short a space of time. On Saturday last a number of our popular sportsmen made for their favorite shooting grounds, and the result of one day's shoot is given 'below: At Calumet, Mr. Abe Klineman Killed 183 ducks, his brother Henry 136, and Mr. Heisler about 140; same day, at English Lake, Almer Price bagged 52 and John Gillespie 45; at Tolleston Lake, F. A. Howe, Esq., President of Tolleston Club, broughi down 91 ducks and a goose; at the Maksavda Club marshes, Mr. Roll. B. Organ brought to bag 60 ducks. All of the above were products of one day's shoot, breides numberless others that I have no record of. At Fox Lake the shooting has been equally good. This evening a party consisting of the following well-known gentlemen start North for a deer lunt: Charles H. Mears, Milton Oliver, John Cowles, Len. Brown, Jonathan Slade and Henry Sloan. They leave on the 5 r. M. train, via C. & N. W. R. R., for Oconto, Wis, thence about sixty miles up the river into the woods, where they go into camp for a two weeks' hunt. A more jolly party cannot be imagined, and with a "stand-pipe" in the party, the dears are liable to be brought to the coles, and no doubt they will be delicious morsels to the anxious sportsmen. Success attend them! Mr. Geo. B. Mansfield, of Connecticut, called this morning, fresh from a tour among the deer since the first fall of snow. space of time. On Saturday last a number of our popular sportsmen made for their favorite shooting grounds, and the

LLINOIS—Butla, Oct. 18.—I see many reports from different sections of the United States as to the prospect for the fall shooting, and will tell how the game is in this section, 118 miles southwest of Chicago. We have the benefit of two good ducking grounds, one being a large swamp lying northwest of here, and the other quite an extensive lake, some fifteen miles southeast. Since the cold snap and high wind of the last few days the shooting has been most excellent, mallard being in the majority. No goese or brant have come in yet. Quail are abundant; jacksnipe and plover are plenty, and prairie chickens seem to get thinned out very slowly. Farmers are opposed to the gumers shooting on their farms, for the average city hunter never closes a gate or puts up a rail after he has passed through, and in many cases fences are kicked down regardless of the stock and crops of the honest farmer.

MICHIGAN DUCK-Shooting.—Grand Rapids, Oct. 21.—

MICHIGAN DUCK-Shooting.—Grand Rapids, Oct. 21.—

Ducks age very plentiful on Indian River in the northern part of this State. One day last week three gentlemen bagged 161 as the result of a day's sport. This river is a connecting link between Burt and Mullett Lakes, and which, with the B. V. and C. L. Ry., Crooked Lake. Crooked River and Cheboyagan River, form what is known as the "Inhand Route." The distance from Petoskey (northern terminus of the Grand Rapids & Indiana R. R.) to Cheboyagan, via this route, is about fifty miles. If the reader will refer to a late map he find them shown as follows: Crooked Lake. Crooked River, Burt Lake, Indiana River, Mullett Lake and Cheboyagan River. Near where the Indian River empties into Mullett Lake, probably a row of Indian Inour, is the Lake View House, where sportsmen will find good accommodations within easy reach of good sport. The editor of the Petoskey Record, in passing through Crooked River a few days since, saw four handsome deer from the steamer. The region cannot be too highly commended to the tourist and sportsman, being easy of access, with very low round trip rates from June 1 to Oct. 31, which are offered by the G, R. & J. R. R. Co. To the sportsman or pleasure-seeker the trip through the "Inland route" is one to be "marked with a white stone." forever after. A beautifully illustrated guide will be published next season fully describing this and kindred attractions of Northern Michigan, which can be obtained free by addressing the General Passenger Agent at Grand Rapids, Mich.

Mich.

Game in the Addrondacks.—It is singular than stall our sportsmen who go to the North Woods do so at a season when game is scarcest. According to our Northern exchanges now is the finest time of the year to be there. Hunting up in the Adirondacks is unusually good at present. The deer are plentier than they have been before in many years; the woods are fairly alive with partridges, and the ponds and lakes in remote regions offer wonderful attractions to the duck shooter. A letter just received from Moose Lake, about forty miles from North Creek, says the hunting there was never better. Elijah Camp, the noted Indian guide, while out on a long tramp last week, discovered three large ponds within four miles of his shanty at Moose Lake that had probably never before been visited by white men; in all his journeyings through the wilderness in that region he had never before caucht a glimpse of them, nor to his knowledge had any other guide or trapper seen them. Camp was surprised at the number and docility of the deer he found around each pond, which, he says, exceeded anything that he had previously noted in all his experiences in the North Woods.—Ithaea Jaurnal.

No Dety on Wild Rice.—Harmood, Oct. 20.—Editor Forest and Stream: One of the greatest drawbacks to the sale of my wild rice in the United States has been the duty sale of my wild rice in the United States has been the duty of two cents per pound, which I now find has been unjustly levied upon it. Last fall I was informed that two cents per pound was the duty, and I advertised the fact, feeling some doubts upon the subject. I secured the services of a friend, and he, making some inquiries at the Custom House, received as answer a note, of which the inclosed is a true copy. Please publish this and the inclosed letter in justice to your readers and myself. Chas. Gilchrist, Fishery Inspector.

"Custom House, Rochester, N. Y.,) October 15, 1880.

"E. C. Burton, Collector of Customs:
"Dear Sir—Referring to the duty on 'wild rice,' I am instructed by Mr. Galusha to say that there is no duty on the same. Very truly,
"Deputy Collector."

TENNESSEE GAME.—Nashville, Tenn., Oct. 19—The quail sesson is now fairly opened, and our sportsmen are having a good time. Birds are very abundant and the weather all that could be desired. Buckholz has a trio of beautiful dogs—"Prince," a pure Laverack: "Jeff.," a red Irish setter; "Belle" and a white puppy. The latter is a prodigy worth mention, as he stood and retrieved the first bird he ever saw. H. C. Pritchett, Esq., is out very often, and being one of the erack shots of our town, never fails to bring home a full bag. The beautiful moonlight nights we are now having induce our lovers of fox chasing to be on the qui vice, and often the delightful music of a pack in full cry can be enjoyed by the

less fortunate inhabitants of the city. Col. Johnson's pack is as fine as any in the State, and a run after them is a joy not soon forgotten. Game is beginning to be brought in from Reelfoot Lake. This is undoubtedly the best hunting and fishng grounds in the South.

Where to Go for Large Game—St. Elmo, Chaffee Co., Colo., Oct. 14.—Deer, elk, bear, mountain lion and smaller game are very plenty in the mountains between Canon City, in Fremont Co., and the South Arkansas, in Chaffee Co., Colorado. Most of the deer (black tail) have left the Continental Divide, crossed the Arkansas River and entered the mountains between the river and the South Park. For good sport among all kinds of large game and within easy access by railroad it is hard to find any that will beat Texas Creek, Plensant Valley and Badger Creek along the line of the Denver & Rio Grande R. R., from thirty to sixty miles from Canon City. If any Eastern sportsman wants to try his favorite rifle on elk, black tail deer, mountain lion and smaller game, why all he has got to do is to get a camping outfit and good blankers and come to one of the above-mentioned points and he will find plenty of game. tioned points and he will find plenty of game.

Long Islam's Spoetsmen's Association.—The Executive Committee of this Association will meet in the Royal Areanum Room, in Music Hall, at junction of Fulton and Flatbush avenues, Brooklyn, on Friday evening next, Oct. 29, 1880, at 8 o'clock. At that time an estimate of expenses of next State Convention will be presented as a basis of assessment on subscribers, and the Subscription Certificates will be ready for delivery. Prize Committee to be appointed. Reports from committees on ground and traps will be expected. The Washington Gun Club Quartette are invited to be present to sing sportsmen's songs. Every member of the association is cordially invited to attend.

ABEL CROOK, Secretary L. I. S. A.

SABBATH MARABDERS—New York, Oct. 25.—Editor Forest, and Stream: For the last three Sundars parties have been going to Pascack, N. J., and openly violating the game laws, not only by shooting on that day, but by skilling quali and other birds protected by the laws. If they had been arrested last Sunday it would have cost the party S472 for fines, yet no one interfered. I procured the services of a constable and searched every train Sunday evening and this (Monday) morning. We found one party, but they had no birds and were badly frightened. I also got a Justice of the Peace to notify them at Pascack that if they shot that day he would arrest them, so probably they will now give it up: but it shows how little our game law is enforced.

W. Holereton.

W. HOLBERTON.

PATTERN—Philadelphia,—Editor Forest and Stroum: Have just read "St. Clair" on gun trials. I think he must have run into an extraordinarily fine lot of guns or his 40 yards must have been very short measure. I do not doubt but what once in a very great while guns can be found to put 361 shor in a 30 inch circle with \(\frac{1}{2}\) \(\text{co.}\) S shot, but I am sure if you go to buy an ordinary B. L. gun with the expectation of getting one to make the above pattern at 40 yards with \(\frac{1}{2}\) \(\text{co.}\) cos. shot, full choked, 99 times out of 100 you will go home with the impression that your gun is inferior to many. I think. The above pattern would be extraordinary with \(\frac{1}{2}\) \(\text{co.}\), and I am sure that your readers can convince themselves by testing their fine shooting guns in public.

J. R.

A New HUNTING GROUND—Green Sound, Ont., Oct., 18.—
Think some of your readers would like to know a new hunting ground for deer, bear and other large game. To get to it start from Owen Sound in a rig travel about 18 miles to Oxenden, northeast; there shoot for a few days, then continue up the Penipsula about forly miles to Lion's Head. Go back from five to fifteen miles from this place and deer, bear, etc., are to be found in dozens, not to speak of fish of almost every variety. The whole country is covered with small deep lakes. Or take the boat from Owen Sound to Lion's Head direct.

There is a lost twice a year. There is a boat twice a week.

New York.—Hayt's Corner, Seneca Co., Oct. 19—In Romulus and Ovid game is now quite scarce; quail having been killed off so close last year there are but few to be found anywhere in Seneca County. Partridge are scarce; a few plower have been seen though none brought to bag to my knowledge. Sunday shooting, I am pleased to state, has gradually diminished: there are a few yet who will get out of sight of more sensible and civilized men, and bang away with old muskets etc., much to the disgrace of the community wherein they reside.

Forest and Stream General Passenger Record.—
East Siginum, Mich., Oct. 15.—The following is a list of huners that went "up into the woods" via the F. & P. M. R.
R., for the week ending Oct. 15:—Mr. Dye and party of 41
from Dayton and Columbus, O., to Reed City: party of 6 from
Union, Ind.; to Ogenaw; party of 9 from Columbus, O., to
Roscommon: party of 12 from Dayton, O., to Harrison;
party of 37 from Toledo and northern Ohio to Grayling, Manton and vicinity, making a total of 105 in six days.

Fisher Boy.—
Chicano. Ill. Oct. 20.—En-route to the hunting grounds of

Chicago, Ill., Oct. 20.—En-route to the hunting grounds of Michigan, via the Ch. & N. W. Ry., are: W. C. Girard and party of twelve from Lebanon, Ind., going to Quinnesec, Mich.; G. L. Barnes and party of four, from Equinumk, Pa., going to Florence, Wis. W. H. S. Chicago, Ill., Oct. 22.—The following party is en-route to-day to the hunting grounds on the Chicago & Northwestern R. R.: J. Gregory and party of ten, from Zainsville, O., going to Quinnesec, Mich. W. H. S. W. H. S.

Indiana—Vincennes, Oct. 19.—Quail are not as plenty this ear as usual, in fact, there are not half the number in the ower part of the State as there were last year. The weather is fine, but the marshes are very dry.

Canada—Perth; Ontario, Oct. 19.—I am off to-morrow for a bunt, fifty miles North, and on my return will probably drop a line to Forest and Stheam on deer lumning in Canada.

-A party of sportsmen passed through this city last Tuesday ra route for Currituck. Among them were Messrs, W. A. Croyden, A. H. Copeland and J. C. Bates, of Messrs, W. A. Croyden, A the Copeland and J. C. Bates, of Messachusetts. They had their dogs with them and were equipped for an extensive campaign. As they are all good shots we shall look for reports of a big bag.

Quall in Philadelphia.—Our readers will remember Homo's statement in one of his recent letters that quail had been unusually abundant within the city limits of Philadelphia. A correspondent from that city writes us that or, t 16th of October he killed six of these birds in the neighb bood of Fairme mt Park in that city.

Winnipero, Manitora,—Oct. 10,—I have had a splendid trip, but was unfortunate enough to lose one of my dogs on Lake Superior; he was sick but a short time. Chickens are very scarce here, snipe and plover plenty and duck so thick that one gets fired of shooting at them. I shall stay here only a few days longer, and then take in some of our Western States for chicken shooting.

C. II.

EXHAUSTED QUAIL-Detroit Oct. 28.-I saw to-day a bey EXHAUSTED QUAIT—Detroit Oct. 28.—I saw to day a bevy of twenty-two quail that we et drowned in the marsh near the light-house at the foot of Lake St. Clair. They flew across from the Canada side, and becoming exhausted dropped into the marsh and were all gathered in without the firing of a shot. I think the parallel to this incident cannot be found on record.

Texas—Indianola, Oct. 20.—Have had an immense flight of ducks on the 16th and 17th inst.; have not seen the like for years. The prospects for game are fine. Having had plenty of rain the ponds are full of water, and there is a very heavy mast. The scrub oaks on the prairies are full of acorns. Have not seen any jacksnipe as yet; with the next cold snap, I think, they will be along. The marshes are in fine condition for them.

G. A.

condition for them.

Brains AND DEER.—Dayton, (thio, Oct., 20.—A dozen hunters from here, the full membership of the Dayton Bear and and Deer Hunting Club, are now comfortably located at "Smizer Cabin;" built by them in Clare County, Michigan. The party are fully equipped for roughling it in the dense pineries and, as they are men experienced in all that pertains to woodcraft, no doubt will be able to give a good report of this year's hunt; so you may expect one more letter at least.

LLINOIS QUAL SHOOTING—Peekskill, Oct. 23. Dr. H. B. Wygant, J. M. Dyckman and myself have returned from our shooting trip West. Found good quail and snipe shooting in La Salle Co., Illinois. My Irish bitches worked like a charm.

Game in Marker.—The game in market for the present week consists mainly of ruffed and pinnated grouse, ducks, Wilson snipe and bears. The ruffed grouse are received from New York, Maine and New Jersey: pinnated grouse from New Jersey and the West; ducks from New Jersey Maine, Connecticut, Wisconsin, Ohio and Long Island; Wilson snipe from New York; bears from Wisconsin. Deer and wild turkeys laker not commenced to come in yet. The game is very plenty, but not in good condition, owing to the dry weather. dry weather

New Jensey—Warren County, Oct. 21.—Woodcock are very scarce at this time, the country and swamps being dry. Last July there were hundreds of them in our wet lands. We do not like the summer law, nor do we find the shooting is improved.

Had your swamps been as dry last July as they are now you would not have seen "the hundreds" you speak about. This season has been an exceptional one, and does not prove the refliciency of the summer law.

The Marquis of Lorne and a party of thirteen other gen-tlemen have been duck shooting in Ontario, and in two days they bagged more than eleven hundred ducks. The Gov-ernor-General showed himself to be a crack shot, for his score was one hundred and fifteen ducks, the largest but one.

—Mr. W. H. Livingston, of this city, has just returned from a three-weeks' shooting trip in Virginia and North Carolina. Mr. L. says that his dog Ray did some excellent work, but that the birds were, in many cases, too small to afford much sport.

### SHOOTING MATCHES

The Falcon Gun Club-Dexter Park, L. I., Oct. 21,—Regular monthly contest for gold club badge and Westley Richard's breech-

National American Kennel Club's Second Annual Field Trials, incomes, Ind., Nov. 15th. Chas. De Ronge, Secretary, 51 Broad

Eastern Field Trials Club's Second Annual Trials, Robins Island econic Bay, L. I., Nov. 29. Jacob Pentz, Secretary, New York.

Dogs at Auction.-On Wednesday, yesterday, an auction sale of dogs was held at Messrs. Barkers', Thirty-ninth street and Broadway. They were a draft from the kennels of Messrs. Hitchcock and Hellgar, of Warrer, Mass., and comprised 12 lots, all of which were disposed of at prices far below their value. Frank II. imported, 1st Philadelphia, 1877. went for \$35; Carlina, a chestnut belton bitch by Carlowitz ex-Princess Nellie by Pride of the Border, was bought by Mr. J. H. Goodsell of the Graphic, for \$22, and he also took the well-known Irish setter Rufus for \$50. Minto by Dash II. ex-imp Doll, 1st New York, 1879, in whelp to Afton was given away at \$11.50, as was the Irish bitch imp Flora for \$8. Elsie, whelped April 20, 1880, by Afton ex-Lathrop's Brenda went for full value at \$18, but Bandit, by Arlington ex-Flora, was worth more than the \$20 he was knocked down at Sandy, another Irishman, realized \$17, and three puppies by Arlington, ex-Flora, went for \$11. After the sporting dog sale, a couple of half-bred bulldogs were disposed of, one of which went for \$22.50, just about five times bee worth.

BOUND SOUTH,-Mr. S. T. Hammond, of Springfield Mass., passed through this city on Tuesday last, on his way to Virginia and Maryland. He goes South to find some good quail ground where he can work the dogs which he has with him to get them in condition for the Eastern Field Trials Mr Hammond had with him five superb dogs -three pointers and two setters. These were the Westminister Kennel Club's Sensation, Mr. Goodman's Rattler, Mr. Lyman's Robbert, Mr. Lincoln's Afton and Mr. Hammond's Thistle, These animals are all good ones to look at, and Mr. Hammond states, no less good in the field. Old Sensation is well known to many of our readers, and his record on the bench is a high one. Indeed, it has been too much the fashion to sneer at him as simply a show dog. We have no sympathy with those who knowing nothing about his work cast slurs upon him. We have talked with a number of gentlemen who have shot over Sensation, and have yet to meet with one who did not speak of his field work in the highest terms. His nose is an excellent one, and his style is nearly perfect. Rattler will be remembered by visitors to the last New York Show where he would very likely have taken first in the Large Pointer Class, if he had not been withdrawn before the judge ing began. He is a large dog of very great power, and with an admirable head; in fact, one would have to look him over very closely indeed to find anything to criticise. Robert is not as handsome a dog as either of the others mentioned, but his work in the field is said to be very good. Afton, to our mind, approaches more nearly the type of the English setter than any dog that we have ever seen. In his make-up he is in all respects a grand dog, and we would go a long way to see him and still further to shoot over him. Thistle, a daughter of Afton, is only seventeen months old, and has never been out with a gun. She is a beautifully made bitch; shows, her owner tells us, great pose, and has plenty of hunt in her.

Mr. Hammond is the man to bring out the good qualities of any dog, and if he finds birds plenty, as he hopes to, we are confident that the dogs that he is handling will show pretty near the front at the coming trials. We hope to have further news of this lot of dogs after our friend is located.

TRIMBUSH.—We understand that the well-known Clumber spaniel Trimbush, formerly the property of the late Mr. Tileston, now belongs to F. O. de Luze, of this city. Trimbush which is probably the best Clumber dog in America, is now at the Westminister Kennels, at Babylon, L. I.

WIN NOT A BULLDOG CLTB'-St. Leonard, Nicolet (lo., P. Q.—Edilor Forset and Stream: I saw reported in your paper that Mr. J. P. Barnard, of Boston, had received from England two well bred bulldogs, sent out by the President of the Bulldog Club. I think it is a great pity that this noble and brave breed of dogs should be so much neglected by the and brave breed of dogs should be so much neglected by the public, and hope to see soon some improvement in the breed on this side of the Atlantic. I believe some fine dogs are to be seen in the States, but I hear that the quality is not up to the English standard. I know that in Canada a well bred bull-dog is seldom seen. At the Toronto show the prize for bull-dogs was withdrawn, and only two dogs were entered in the late dog show in Montreal. The prize-taker was a thick-headed while bull terrier, with cropped ears; the other animal was something like a bulldog. But had a pointed nose. late dog show in Montreal. The prize-taker was a thick-headed white buil terrier, with cropped ears; the other ani-mal was something like a buildog, but had a pointed nose. All the buildogs I have seen in Canada are poor about the All the bulldogs I have seen in Canada are poor about the head, the skull is too narrow, and the face generally nuch too long. Anything in the shape of a big bull terrier passes here for a bulldog. I should be glad to see something done toward improving the breed, but it is hopeless to expect anything of the sort in Canada. Cannot some of your gentlemen fanciers organize a bulldog club on your side of the line? I, for one, would put my name down, although my home is in the woods of Canada.

Our correspondent, as may be learned from previous communications to our columns, is an enthusiast on this subject. We heartily concur in his suggestion that the buildog is worthy of more attention than he receives. Are there others who will join with "Hemlock" in his proposal to advance the breed in this country?

LONG-LEGGED COCKERS-Editor Forest and Stream attention has been called to a letter from Mr. Burr Hollis, which I think requires some answer. Now in that letter be makes some very wild shots. He informs us that one could as soon "move a steam thresher through the brush without

noise as a ferret-like make of dog, like champion Brush," to whose shortness of leg he objects. I happen to know a little about cockers and working them, and I think that that assertion proves that Mr. H. does not. In the first place, a long-legged cocker, like Mr. Hallis Wildair, for instance, has the advantage only in comparatively open ground, while in thick cover the short-legged dock by itself able to make his way, whether noiselessly or not, for the noise is rather an advantage than otherwise. Again he speaks disparagingly of Brush on account of his weights (40 fbs.), but "people who live in glass houses should not throw stones." His Wildair weighs 33 lbs, if I am correctly informed, and as he is a young dog he will weigh more before he will weigh less. I do not wish to be understood as advocating such length of back as Brush shows, nor yet as running down Wildair, which I be-lieve to be a very good dog but for his legginess; but what I wish to say is, cannot we strike a happy medium between the ferret and the stagbound type. Let each one breed to suit his ideas down the throats of the public. What my idea of a cocker is will transpire later, but I think that perhaps Mr. H. is better informed on the subject, game of fowls than on that of the cockers. noise as a ferret-like make of dog, like champion Brush," to

ENGLISH RETERENESS—New York, Oct. 22.—Editor Ferred and Stream: In answer to F. L. H., Hamilton, Ont., von state that there are plenty of genuine retrievers in the United States and Canada. With all due deference, I hardly think the statement is warranted, for I have never yet come across anything like a pure specimen of the English retriever in the States. In Canada there ought to I e some owing to the number of sporting Englishmen who have come over either to reside or on shooting expeditions and brought dogs with them, but during a five months' residence across the line during this year I only met with one retriever. This was at the Toronto dog show, and the dog was exhibited by Mr. John Shaw, of 102 Lumley street, Toronto. Rover, for such was his name, was a black, curly-coated retriever, and with the exception of being undersized was a fair specimen of the breed. With our method of breaking dogs to retrieve there is no necessity for the use of retrievers, lence they have never been imported, and are not likely to be except as stray fancy specimens.

Sales—New York, Oct. 20.—Editor Forest and Stream: Thanks to my advertisement in Forest and Stream: I have disposed of the litter of black and tan setters, by Glen out of imported Belle, as follows: Dog pup to Mr. M. D. Mann, of Hartford, Conn., and named Glen III.; dog pup to Mr. J. B. Montell, of New York, and named Max; dog pup to Pr. Aten, purchased for a friend of his. Bitch pup to Mr. F. H. London, of Rockhill, S. C., and named Belle H. The remnining birch pup I concluded to keep, and have named her Broomhill. If she does well and shapes as she promises to do I think she will be a credit to her sire and dam when seen on the bench next year.

Jas. Warson.

A Long Chase—Ruthaud, Vt., Oct. 25.—There is always some one particular thing that makes me anxious to get my paper, and this week I expected to see that Fox Chase record beaten, not once thinking the old black and tan hound Dan, that lies at my feet, would be the first to put in his record. Two years ago this coming winter he was started with another dog at 8 o'clock Thursday morning and was taken off the track Saturday at half-past two r. M. We can't prove that they ran the same fox all the time, but we can prove by men that were chopping in the woods that they saw them and the fox several times Friday and Saturday; and we know they ran all day Thursday, because we were there. They were all right at the finish and had a splendid appetite.

Day,

Hornell Cocker Kennel Club—Hornelbeville, N. Y., Oct. 24.—As Mr. Hollis has withdrawn his dog from service in our club, we have put in his place one of his sons (Burchelte), a very handsome black and tan of good pedigree. Address all communications to J. Otts Fellows, Sec. H. C. K. Club.

### THE KENNELS AT SANDRINGHAM.

THE following description of the famous kennels at Sandringham, England, the residence of the Prince of Wales, is taken from the correspondence of the Chicago Inter-Ocean

is taken from the correspondence of the Chicago Inter-Ocean:

Passing through the long ball rooms to the conservatory the latter is found stocked with a wealth of rare exotics, blossoming plants, all sorts of new ferns and palms and graceful, flowering vines. Then, leaving the residence, we walk once more down the smooth paths, and turning to the left come to the picturesque "Bachelor's Cottage," where, aid the guide, with a merry twinkle in his eye, as we viewed the innocent and dove-like looking retreat, "when the house is full of guests, or too crowded, the young gentlemen of the company sleep." Strolling on through plats of flowers and broad paths, shaded by superh elms, the "kennels" come into view, and on our appearance a most tremendous "yowl" issues from multitudinous dog throats as the petted animals dance wildly about in their little front yards and bring the keeper from his costy cottage near at hand.

Every dog's day must be a holiday here, and the aristocratic English canine certainly makes his house as much his castle as does his master.

Every dog's day must be a holiday here, and the aristocratic English camine certainly makes his house as much his eastle as does his master.

"These kennels," said the keeper, who had charge of the Queen's for seventeen years, "are the finest in England, and the Prince and Princess think more of them than anything down here. Every Sunday after lunch the Princess comes down and stays a good bit, and gives bisenits to the dogs." In appearance the kennels resemble long rows of thry brick houses, made to accommodate one, two, or three dogs, each having a comfortable bed of straw, and the dours opening into small but separate yards paved with brick, clean as a new pin and fenced in by iron railings, which again face upon large yards, well turfed, in which the dogs are allowed to exercise. All are magnificent specimens of their kind, and many bought at an enormous cost.

There were the Russian bloodhounds, great snow-white animals: English setters, fox and skye terriers, dachshunde or German turnspits, as they are called in Germany, where they have been set this in the body, which almost touches the ground, so short are the legs, terminating in broad feet turned outward.

An enormous Thibet mastiff, almost black, had a house to himself, and two huge, kindly-eyed St. Bernards, unusually light in color, were his neighbors and companions in respect to a thoroughbred English buildog, the Mephistopheles of the

party, who bit viciously at the gates as we passed. The Dalmatian or carriage dogs, black and white spotted fellows, with lavender eyes, are the Princess's favorites, and she has one constantly with her. A party of very raggy fsky etrriers were next to a beautiful Chinese dog, the fac-simile in color and almost in shape and size of a young lion. The Scotch collies, with their black, wavy coats; the ugly brown and white French retrievers; the cunning little pugs, pets of the Prince; the Sussex spaniels, the white Kewfoundland, spotted with tan; the English greyhound, and the Scotch deerhound were all represented.

The keeper knew every one of them by name, and made his presence doubly welcome by the bits of meat biscuit he threw to them. Finally, leaving the noble family of dogs, we passed into a separate yard, in the centre of which we could see a deep, brick-lined pit, in which were sleeping two black bears, "Folly" and "Charlie." On hearing the keeper's voice, they set up a great whining, and "Charlie." a tremendous black fellow, elimbed like a cat up the rough trunk of a tree which was firmly fastened in the centre of the pit. Reaching the top, on which was a board about two feet square, he rose on his bind legs, balancing himself carefully, and begged for a cracker. He was not more than his own length from us, on the same level, but, poor fellow, even with templation, le was incapacitated from making a jump by his clumsy build. When he descended Polly took her turn, and begged in quite a copnetish way for a bit.

"They are American bears, given to the Prince by the Duke of Manchester," said the keeper, adding, with a sort of awe, "I suppose you see them most every day there, ma'am."

Then we called at the monkey house, and saw the queer, uncanny little animals the Prince brought from Jamica, for they are regular boys and like anything that and white mic, which, said the guide, "the Prince brought from Jamica for they are regular boys and like anything that any on four legs, even these nasty creatures," he c

minite disgust. Leaving the monkey house we walked some distance to the neat cow stables of red brick and white facings, where a dozon or more of beautiful Alderneys are kept, and on to the prettiest little cottage that could be devised, known as the "Princess's Dairy." Imagine a tiny building of brownish-red brick, jutting out in quaint little gables, miniature bay windows, and odd portices, and fairly festoned by some beautiful vine with feathery foliage and great purple star-like blossoms, tangled up with damask roses and sprays of ivy. Then think of a beautifully carved bear of Swiss workmanship, life size, with a basket on his back ready to hold the inevitable unbrella. Then open the door and you find yourself in the daintiest sort of nilk room, with a tiled floor and marble tables, upon which stands, in porcelain pans, the rich milk for royal use. Here it is that the fair Princess of Waltes, a lo Marie Antoinctte, comes with noble lords and ladies to make butter in a sliver churn, and afterward to spread it on wafer slices of bread, and have it with her tea in the tiny room adjoining, to which no one is admitted but the Princess's most intimate friends.

#### NOTES FROM FOREIGN EXCHANGES.

QUITE a vigorous discussion has been going on recently in the columns of some of our English contemporaries between two sets of correspondents. One party maintains that a game-keeper has a right to shoot of otherwise destroy any dog found trespassing on his master's property, while the other denounces this view of the case, not even admitting that a dog can be shot while following game.

There have been a number of decisions, bearing on this subject in the English courts, which appear to amount to this: that a dog may be shot if it is in the act of pursuing and "if the game could not otherwise be saved from destruction."

A Norwich (England) than have reconstitutions.

tion."

A Norwich (England) firm have recently invented a new kennel, with yard, which will be a very great convenience to dog owners. The house can be made of any size and can be provided with a separate yard for each compartment. It is made of wood with a corrugated iron roof supplied with gutters and leader. The yards are six feet square, the railings from and fitted with a gate and padlock and with reversible troughs. The invention is certainly a great improvement on anything now in use.

ment on anything now in use.

In the sheep-dog trials held at Ulverston, October 1st, there were thirty-nine entries of dogs and bitches. The money prizes offered amounted to £71, besides three cups valued at 5 guineas each, presented by the Duke of Devonshire, the president of the Northwestern Counties Sheep-dog Trials Association, for 1880.

Bright, the first prize dog in the Local Stakes, on his first trial failed to pen his sheep in 11 minutes, but on a second lot penned in 77 minutes.

Ean the first prize high the da had but but genned in eight

Fan, the first prize bitch, had a bad lot, but penned in eight

inutes.
In the All-aged Stakes Rob, first prize, worked wonderful-well and penned in 94 minutes.
Bess, first prize bitch, penned by careful work in eight

minutes In the Puppy Stakes Mr. J. Woof's dog Bright took first,

In the Puppy Stakes Mr. J. Woof's dog Bright took first, and Guilty, who had taken second in the Local Stakes, took first prize for bitches, penning in 57 minutes. The work displayed by all the dogs entered was excellent.

The celebrated greybound bitch Bit of Fun, owned by Mr. Thos. Sharpless, of Forest Bank, Crawshaw, Booth, England, died October 4th. She was the winner of over ninety prizes.

Among the victims of the recent dreadful colliery explosion at Scahan, England, was a collier, named Ramsey, whose remains were so disfigured that at first another body was taken for his. A Newfoundland dog belonging to Ramsey's father, when the first corpse was taken to the house of the deceased, appeared to be greatly enraged and barked almost continuously, when, however, the mistake had been discovered and which Ramsey's body was brought to the house it ran to the coffin with every manifestation of pleasure, and could scarcely be induced to leave it while it remained in the house.

First Fox of the Season—Cazenovia, N. Y., Oct. 25.—
Dr. E. C. Bass' parly were out to-day for the first time and killed a fox. W. D. Smith was the fortunate one. We refrain from saying how many times this same party were out last season without shooting a fox, or telling how many times they got one with a spade.

Hammerless.

—The idea of having field trials in a locality where there were no birds, as was the case with the late Nebraska trials. "is a thing that no fellow can understand."

#### DEVESTIMANTA PIELD TRIALS

HE first field trials held under the auspices of the Pennsylvania Charles Williams wania State Field Trials Association were commenced on Tuesday, at Quarryville, Laneaster Co., Penn. Among the well-known day, at Quarryvine, Lancaster Co., Penh. Among the well-known sportsmen of the State and the Eastern cities present were: B. J. McClure, J. R. Stayton, Secretary of the Association; J. R. Hen-ricks, W. C. Beerringr, J. S. McIntosh, James Verner, Ed. Gregg, B. F. Wilson, H. M. Short, Walter Passavant, D. McK. Lloyd, J. Palmer O'Neil, President of the Association; F. A. Tremaine, of Pittsburg; W. A. Coster, of Flatbush, L. L; S. G. Dixon, of Pritesing; W. A. Coster, of rentonsa, E. C. S. G. Dixon, of Philadolphia; T. S. Thompson, Thompson, Pa., Albert A. H. Meredith, of Boston; J. M. Taylor, of Lexington, Ky.; Jos. J. Snellingburg, of New Brighton, Pa.; W. L. Met'onnell, of New Castle, Pa.; Wm. Senger, of Gleufield, Pa.; T. A. Smith, of Stock-

holm, N. J., and Geo. W. Porter, Jr., of Harrisburg, Pa.

An early start had been arranged. A special train had been chartered to run down to Quarryville, a small village which lies about fifteen miles to the southeast of Lancaster, and at nine o'clock we found ourselves puffing down with the judges, contestants, dogs and a number of the residents of Lancaster, among whom was F. A. Diffenderffer, in whose hands the arrangements of all the detail of the trials had been placed. It was not until eleven o'clock that the destination was reached. Before going on the grounds a glance at the official entry book showed that it had closed with 43 entries, of which 17 were in the All-aged Stakes, 13 in the Puppy, 4 in the Nursery and 9 in the Association. The tollowing were the

TUESDAY, OCTOBER 26, 1880.

ALL-MGE STARES, at \$10 each. First prize, \$100; second prize, \$50, and third prize, \$23.

Steahman's Pat against Brown's Dash.

Stayton's Belton HL against Brown's Dash.

Stayton's Belton HL against Brown's Dash.

Scalenburg's Thunder against Breefer's Rotte.

Sullers Dash against Hendrick's King Dash.

Yeardey's Countoss against Suellenburg's Button.

McConnells Lady Laverenck against Yearley's Little Lady.

Seager's Doctor against Steahman's Biddy.

Shortly after eleven the first brace was ordered down, and Pat, handled by T. W. Ferrington, and Dash, winner of second in the free-for-all at Pathka, Ill, in the N. A. F. ritals of last year, by H. M. Short, made the start. The weather in the morning was clear, with a good seenting wind blowing from the southward, but later on clouds began to thicken and the rain to patter down, and this and the scarcity of birds made the first day's work extremely tedious; so that at the end only two heats had been run and one remained unfinished. We saw at once that the Trials had been run and one romained unfinished. We saw at once that the Trials had been run with discovered the trees, and many of the farmers were at work in the work of the country of the farmers were at work in the old.

Add de to bis, the birds had been shot of, and with one exception the bevies moved were broken ones. The best lay through several beautiff valleys, such are only seen in the Keystone State, the long stretches of state being hemmed in by rolling hills, covered with highly cultivated farms, many of which were

so tidly kept as to deprive even the fence rows of the slightest cover. The first field was an old clover lot; the dogs were slipped at the leeward end, and it was drawn blank. When balf way down the next—a burn fot—bask, who was by far the faster dogs, pointed, drew on and pointed a flock of Guiner fowls, but left them when ordered; and this field also proved a blank. The next field was a rag-weed one, and in it a bey of birds had been sentired by a local binder. He was requested to leave, but not before he had local birds. He was requested to leave, but not before he had sent by the leaves and the bettom, which was seriful oaks the judges ordered the dogs, and the bettom, which was seriful oaks the judges ordered the dogs, and the bettom, which was envired by the lately fallen leaves, proved a poser, for neither of the dogs showed gaine. A cornicied was then leafen out, Dash quartering his ground with good speed, and showing excellent style as he warmed to his work. Tat also recented under good command, but was behind the scenes alongade of Dash. An hour had now clapsed without a find, when a shoul from the noble array of spectators amounced that a beyty had been fushed by the crowd. It was then learned that five birds had been marked into some chestnut sprouts. The dogs were ordered into the brush, and Dash at once found and pomited magnificially. Pat was given a chance to back, which he refused to do, working up insied and sharing the back, which he refused to do, working up insied and sharing the Bellon and Cornelia were then called, but the latter was not fortheoning.

Thunder and Roxee cause next, handled by their owners and

back, which he refused to do, working up neted and sharing the point in an uncertain way, which resulted in a flush. The dogs were ordered up and the heat awarded to Dach.

In the point of the point o

#### CURRENT DOG STORIES. ſ.

The Council of Brantford township have recently offered a fee for each dog killed. One innocent old geutlenan slow a cur, and, instead of lopping off the tail, carried the carcass bodily before a magistrate and got his check. Then, taking the body away, he cut off the tail, exhibited it and got another check. Yet once more he tried the venture, and this time it was to cut off and present the head, and he got still another check! Another spotless youth of ten summers drowned a litter of pups and got \$2 apiece for their tails,-Paris, Ont., Transcript.

IT. John T. Raymond had a curious experience at Lincoln, Nebraska, John I. haymon and a curous experience at Lincoln, Achraska, while acting in the trial scene as Colond Scherx. Two dogs began to fight in the centre aisle of the theatre, and all attention was instantly diverted from the stage to the fight. "I move we suspend proceedings in this court," said Raymond, "and I'll bet a dollar on the white dog. "I'll take you," cried a man in the audience. The white dog won, the dollar was passed across the footlights to Mr. Raymond, and the acting of the play was resumed. - Evening 111

An interesting right was seen at the waterworks this morning, Superintendent Hamilton has a small terrier dog that knows every nock about the works, and knows where things belong. This morning an alligator got out of his cage and started for the river. At the time the dog was playing along the water's edge. It saw the alligator as it was about to enter the stream, and immediately comprehended the situation. The alligator was out of its proper place, but there was no time to give an alarm. The dog immediately started for the scaly trespasser and caught it by the tail.

A bitter fight then ensued. The dog attempted to pull the alligator up the bank to its cage. It also appeared to try and give an alarm, but seemed afraid to open its mouth lest its hold would slip and the alligator would get away. At this point in the battle the tide turned. The alligator caught the dog by the neck and gave him ample time and cause to raise an alarm. The dog did so. The men who had been witnessing the affray came to the dog's rescue.

Their appearance frightened the alligator, which released its hold and endeavored to get away. The dog again seized it by the tail, pulled it to the bank and held it securely until the men could put it into its cage.—Indianapolis News.

A mutilated five-dollar note was received at the Treasury to-day from Marion County, Indiana, and redeemed. Accompanying it was the following affidavit: "Before me, John E. Scott, a notary public in and for said county and State, comes Walter Rivers, who, being duly sworn, deposes and says that on or about the 2d day of September, 1890, in the city of Indianapolis, a dog owned by the deponent did feloniously and with malice intent seize a five-dollar bill numbered B 256,460, series 1875, and bank number 40, and after chaving off the right-hand lower corner and the entire lefthand edge of the aforesaid bill, in spite of all due effort on the part of the deponent, succeeded in swallowing the same, and no amount of after effort in choking the storesaid dog availed to re-

cover the torp portion of said bill : and, furthermore, deponent decover the form portion of said on; sunt, furnishing, deposits to-clares the said dog to be duly licensed by the city of Indianapolis under No. 187, taxes paid in full to May 1, 1881, and socks to ob-tain from the Hon. Treasurer of the United States all proper relief in the shape of a new five-dollar William." The new bill was sent. Washington Star.

#### ..... KENNEL NOTES.

NAMES CLAIMED—Bragg— Vanduara.—J. Otis Fellows, Hornells-ville, N. V., claims the name Bragg for black dog, and Vanduara for liver and white gyp, whelped May 29, by Wildiar ex-Little But-tercup, now dead. Davy Jones.—Mr. Geo. D. Macdougall claims Davy Jones for black cocker dog, whelped August 1, by Herbert's Dick out of Duclos' imported Beauty (bred in Ottawa, Ont.) Adulhin, for black cocker dog pup whelped Oct. 25, by Wildiar out of champion Cora. Hazel, for black cocker bitch whelped Oct. 19, by Rollo out of Madcap.

Nales - Victor-Lucy Webp.—Mr. N. Elmore has just sent to Dr. F. H. Rehwinkle, Chillicothe, Ohio, an English hare beagle dog pup, out of Lucy by Victor. Elcho II.-Del. Dr. J. J. Jennelle has sold from his Elcho II.-Del. Hiter of Irish setters, to Thos. Osborne, Dn Quoin, III, a dog: to T. D. Geoghegan, Louisville, Ky., a blick.

PRESENTATION—Rays-Delta Whelps,—Mr. H. W. Livingston has presented to Dr. John Thornley, U. S. N., Charlottsville, Va., a white and lemon dog pup, and a liver and white dog pup, by Ray out of Delta.

will be the word of the color of the MacLand MacLand Age of Computer Statileen, third in the miscellaneous class at the New York Show, 1880, two dog mups by Mr. Leake's Tim of Toronto. Neroh.—Dr. J. S. Nivens, of London, Ont., imported Norah, by Spring out of Nettle, sever puppers, four dogs and three bitches by Mr. Frame's dog, of Comber, near Belfast, Ireland. Madcap.—At the Lachine kennels, Oct. 19, the black eccker bitch Madcap, ix pups, four dogs and two bitches, to Robertson's Rollo thack. Cora.—On Oct. 25, the liver colored cocker bitch champion Cora, six pups, four dogs and two bitches, to Burr Hollis' Wildair (black).

BRED-Dayton.—Dr. J. J. Jennelle's Irish setter bitch Dayton (Rob-Duck), litter sister to his Dell, has been bred to his Elcho II

RANGE AND GALLERY.

Worcester, Mass., Oct. 23.—Yesterday the Worcester Light Infantry, Co. C. Second Regiment M. V. M., had their annual shoot. The distance was 200 yards with a possible score of 25. The principal content of the principal co pal scores and the prizes awarded are as follows: The first prize was given by Capt. Child, who commands the company. It is a gold pin supporting an archamatked "First Prize;" From the centre of the arch hangs a tiny knapsack inscribed "Co. C. 2d Regt., M. V. M." Below is a target with two guns crossed over the face, while below all hangs the company's monogram, "W. L. I." This prize was awarded to F. A. Hatch for a score of 19. The second prize a silver target hanging from the company's monogram, was received by H. Haynes, his score being 18. Mr. F. L. Allen ranked third with a score of 14.

Thursday, the 21st, the City Guards, Co. A. Second Regiment M. V. M., had their annual target shoot and observed the fortieth anniversary of their organization. The prizes awarded and the scores made were as follows: First prize, the company gold medal, awarded to Capt. E. R. Shumway for the third time, score 17 points second, Sergt. James Early, score 16, a gold chain and charm third, Geo. N. Lougee, score 15, an alarm clock; fourth, William H. Morse, score 15, an order for a hat; fifth, William E. Aldrich score 13, a pair of sleeve buttons; sixth, William G. Tainter, score 12, a scarf pin; seventh, George W. Bemis, score 11, a pocket knife eighth, Thomas S. Danforth, score 2, a leather modal. Mayor Kelley, in presenting the last prize, called the recipient the hero of the cession, and informed him if he always were it next to his heart it would keep off the rheumatism and the neuralgia. To the past members the following prizes were awarded: To Warren Willard a cane, score 16; to Lieutenant Forbes B. Fay, score 14, a paper weight. In the evening there was a banquet at the Bay State House, which is owned by Messrs. Pond & Shepard, who are wellknown sportsmen.

MAMMOTH RIFLE GALLERY-Boston, Oct. 22 .- The third week in the Inaugural Rifle Match has shown some good shooting, and the best so far this month. Mr. George F. Ellsworth, of the Gardner Rifle Club, was nearly successful in getting a clean score of eight con-secutive bullseyes. He made a splendid 39; his fourth shot was a two-o'clock four, close to the two-inch bullseye. Mr. E. F. Rich ardson, of the Massachusetts Rifle Association, also was nearly successful in getting the extra prize. His fifth shot was a fivesuccessful in getting the extra prize. His fifth shot was a five-o'clock nipper, so close as to split the bullet. Both Mr. Ellsworth's and Mr. Richardson's scores were fine, and worthy of especial men-Mr. Richardson heads the list with 191 out of a possible 200 his five scores of four 38's and one 39 will be hard to Frank Hollis, of the Medford Rifle Association, is second with 189, ream months, or the mentioral rune Association, is second with 189, he having increased his score two points over last week. The following is the standing of the several competitors to date; 50 yards; rounds, 8; possible 40; five scores to win, or possible 200:

E. F. Richardson	38	38	38	39-191
Frank Hollis	38	28	38	38-189
I'. A. Pollard36	37	37	35	39-157

Boston, Mass., Oct. 23 .- An erratic wind and strong light met the short-range rifemen who faced the butts in the early part of the shooting at Walnut Hill. The attendance was not large, but the shooting was first-class. The few entries in the autumn match are hardly worth mention, consequently only one is given, that of Mr. Harris, which is capital. The 500 yard off-hand match did not fill burgely, and owing to a sharp shower which occurred no scores were tinished, the participants being driven to shelter with wet traps, while the scorer watched the targets from the observatory under the hill. Following are the best scores only in detail:

The Creedmoor Tayget,		i
H. S. Harris5 5 5 5 5 5 5	4	4 5 5-48

MAGNOLIA RIFLE GALLERY .- Boston-The third week of the October match has shown good work. Outside of the regular competition an improvised match was shot with rides at 100 feet between Mr. T. C. Banks, of the Forest and Stream, and Mr. R. F. Scha efer, a well-known shot of this city. The conditions were fifteen shots. Mr. Schaefer won by nine points, his total being 58, and Mr. Banks, 49. The summary shows what has been done with the rifle and pistol as follows—100 feet; possible total, 250:

On Friday, Oct. 29, the Raymond Sportsman's Club have their regular meet ; also a team match with the New Bedfords

New Haven, Ct.-The Second Annual Rifle Tournament of the Connecticut Brigade opened on the Quinnipusc Range, Oct. 21, and ran through two days very successful work. The first brigade shoot of the Guard was held at the same place last fall. Then twenty-nine company teams and five regimental teams (counting the fifth battalion) competed. This year but nineteen companies and three regimental teams were entered. In the brigade are forty-six

The officers of the meeting were well satisfied with the prospect however, considering the great political excitement and the dissat isfaction that resulted from the First Regiment marksmen being al-lowed to carry off prizes last year won with alleged improper sights. Among those present at the range this forenoon were General Smith and Majors Watson, Stetson and Bissell and Licutenant Colonel Morgan of the brigade staff; Colonel Barbour of the First Regi-ment; Colonel Crofut of the Fourth Regiment. Major Fisher and his Hartford Foot Guard team were present, this company last year being unrepresented. There were no entries at all from the Third Regiment.

The shooting was kept up without intermission all day, excellent luncheon being furnished on the ground.

interior neing infinished on the ground.

In the company team match, open to teams of eight from any commun in the Brigade of Foot Guards, each man fired seven shots at many on the Brigade of Foot Guards, each man fired seven shots at least 200 and the 500 yards distances. The largest number of points had could be made were 280. Those were the scores:

	200 yds,	500 yds.	Total
Co. E. New Britain, First Regt	219	195	414
Co. K. Wallingford, Second Regt	193	211	404

The prizes, 11 in number, were awa	rded to	the compar	ay in th

CREEDWOOR-Oct. 20.-The second series of the Seabury matches was shot at Creedmoor, under the most favorable conditions; the natch was well attended chiefly by the long and short-range New York amateur riflemen, as professionals are debarred by the conditions in all of the Scabnry matches. The weather was splendid, especially for the short-range men. The scores put up by them, particularly in the first-class, were by far the best yet rolled up in any match. Nearly all of the crack shots were present. In addition to these was added Chas. E. Blydenburgh, an old habitue of the range, who shot in the first international match and who was here on a visit from the far West. He was very warmly welcomed.

While the short-range men were in their glory the long-range men had a very troublesome time of it. The wind was fickle, and the dense mirage (the so-called "Gin and Sugar" atmospheric condition) before the targets prevented marksmen from locating their shots. At 800 yards this difficulty has a very triflling effect, their shots. At 800 yards this distance shot at, it forms a thick, wary, dizzy veil in front of the targets. Still the shooting at this distance under difficulties pleased "Old Reliable," Colonel John Bodine, who was the executive officer of the long-range match, while Sect'y Donaldson did the honors for the short-range men in

WATERTOWN, N Y., Oct. 7 .- The annual meeting of the Watertown Rifle Association began to-day at the range on Bradley street, Following is the record:

First match open to all members of "C" company, Thirty-fifth Battalion N. G. S. N. Y., in good standing. Remington military rife; 200 and 500 yards. Prize, gold medal champion badge, pre-sented by Captain Miller. This match was very interesting, the shooting being excellent at both ranges and the contest between Messrs. Zimmerman and Reeves being very close and exciting Both gentlemen exhibited a great amount of nerve and skill. In the scores it will be observed that several men made the same totals Those, however, are considered best which increase in numbers from the start. The score is as follows:

									Total,
Zimmerman5						4	4	4	4-21-43
Reeves 5	5	4	3	3 - 20	-4	4	- 5	4	5-22-42
Luther5	4	4	5	4 - 22	4	4	5	3	3-19-11
Luther	4	3	4	4-19	- 2	4	5	5	5 - 21 - 40
Richey4									5-14-35
Miller4									2-14-34
Adams3	-1	3	4	2-17	2	4	2	4	5-17-34
Scott 4	4	3	5	4 - 20	2	2	2	4	2-12-32
Otls4	-4	4	3	5-18	3	4	2	5	5-19-37

The next shoot was a subscription match open to all comers. Any rifle 200 yards seven rounds. The score was as follows

Reeves	30	Miller26
Zimmerman	29	Settle26
M. Cooper	27	W. Cooper36
Baker	26	Cooke25
Luther	26	Adams25

The next competition was for the association match. Open to all members of the Watertown Rifle Association. Any rifle; distance, military rifle, 500 yards; special rifles, 600 yards; Urcednoor rifle, 700 yards. All at the 2d class target. Prize silver club medal, to be shot for at the spring and fall meeting of the association and to be won three times before becoming the property of the winner. This match was the most exciting of the day. Reeves had already made the best score when Zimmerman shot, and he was obliged to make a bull's eye the last shot or fail to win. He made it and now holds the medal, he having won it three consecutive times by

STRACUSE, N. Y. Oct. 20.-The fall meeting of the Sixth Division Rifle Association opened to-day on the range at East Syracuse. There were present a numerous gathering of militiamen and rifle shots from Central New York, representing several organizations of the National Guard. The weather was not so favorable for good marksmanship as it might have been, but despite the bitter coldness of the air and the prevalence of s strong breeze, some excel-lent shooting was done. The programme of matches and the resells were as follows:

Subscription Match-Open to all comers; 200 yards; any rifle | Silbert | District | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office | Office

Sources Norva - Hoboken, Oct. 21 .- At the annual meeting of the Hoboken Schuetzen Corps, held at their headquarters, 66 Adam street, the majority of the members were present to hear Adam street, the majority of the members were present to hear the annual reports of the secretaries and treasurer, which were read, and showed that the corps is in a prosperous condition. The result of the election for the coming year was as follows: Wm. Bremanermann, Captain; H. Intetich, Cor. Secretary; J. Widmann, Fin. Secretary; G. Nelchior, Treasurer; O. Keller, Trustee; F. Reith, First Lieutenant; H. Stappenbeck, Second Lieutenant; A. Schleuss, First Shooting Master; H. v. der Leith, Second Shooting Master. A motion to procure new uniform (instead of the green blones) was adopted. Preparations for a ball, to be held in February, 1881, was left to a committee.

STOCKTON RIFLE RANGE—Canden, N. J.—The Directors of the Stockton Rifle Range, of Cainden, N. J., announce the matches for November, and say :

"This being the last programme of the season, the officers and directors of the Stockton Rifle Range Association take this oppor tunity to return thanks to their numerous patrons for the liberal encouragement given them, and to inform them that the additions and improvements necessary to make Stockton what its advantages of location and facilities of access entitle us to expect it to become - the most popular range in the country—will be completed before next spring, and the season of 1881 will open with a new range of 1.000 yards in addition to those now in use, and it is earnestly hoped that our friends will continue to give it their support, and that those who have availed themselves of the recreation offered by the noble pastime of rifle-practice will continue to patronize the range that has in such a short time become their favorite resort."

The programme includes the following:
November 1—Shurps' Match for Military Rifles, Second Series. This match will open Monday morning at ten o'clock, and remain open until 20 scores have been made, when the rifle will be awarded to the competitor making the highest score of the 20. Immediately thereafter another competition will be opened and a rifle awards to the highest score of the 20 made, and so continued until the 15 competitions of this series is completed. Competitors can thereby shoot between ten and four o'clock on any day in the month except Open to all comers; 200 yards; ten rounds; Sharps Sundays. Open to all comers; 200 yarus; ten rounds, standard military rifle, without cleaning. Competitors having won a rifle in the first series of Sharps' matches, with a score of over 40, will be handicapped two points in these competitions.

The Association has provided a Running Deer target, which will be run as a bull-seye target on Tucsdays, Thursdays and Saturdays. Deer to be run by signal from the firing point only; any rifle, including repeaters; as many shots as practicable may be fired during each Tickets entitling the competitor to one run will be sold at ents each. A fine of ten cents will be imposed for not firing, ten cents each. for firing while the deer is out of bounds, or for hitting the haunch. Firing is only allowed while the deer is crossing a space 90 feet long in the centre of the run, which requires about five seconds.

-Champion Marksman's Badge of 1880.—Open to November 13—Champion Markman s range of 1899.—Open to all members of the Second Brigade, National Guarda of New Jersey. 200 and 500 yards; five rounds at each, with the military rife in use by the State. This badge will be awarded to the competitor who, at the close of the season, shall have won it the greatest number of times. In case of a tie, the highest aggregate score of all the competitions participated in up to that time to decide.

November 20—Hunter's Match, for Rapidity and Accuracy at the

Running Deer Target.—Open to all comers; 100 yards; any rifle (including repeaters), no wind gauge to be used, but sights to be over the centre of the barrel; six runs, as many shots as practicable to be fired during each run and while the deer is within bounds

November 25-Thanksgiving Day-Turkey Ritle Match, -100 yards; Position, off-hand; Weapon, any rifle under the rules: turkeys to be placed so that the head only will be exposed—to be killed outright before being awarded as a prize; entrance fee, 25 cents, and ten cents per shot; number of shots unlimited.

Same Day—Glass Ball Subscription Match.—Weapon, any rifle not over .22 calibre; ten shots: entrance fee, 50 cents; re-entrics permitted, but only the highest score to count.

Berkeley, Cal., Sept. 25.—The rifle teams of the Oakland Light Cavalry and of the University met to-day on the University's shooting range. The University team was victorious by four points, 200 yards. Score as follows:

THIS YEAR'S RECORD

THIS YEAR'S RECORD.

THE season now closing has been in many respects the most successful in the history of American yacking. If devoid of sensational features, such as "grand events," "great festivities" and similar ostentations display, it has seen a more rapid growth of "true yachting" than any of its predecessors. There has been quite as much racing done and fully double the amount of cruising, of the property of the property of the season of cruising of the season of the season of the deep has been working for some time and has cropped out in a more promising degree this season than ever before. We allude to the education of the yachting fraternity as seamen and rapid substitution of saling for the love of sailing in place of the mere owning of big yachts for the display of wealth or for the indulgence of social excesses. If the sensational writers of the day, who love to disport in the huge headlines of a poster in answer to a craving for notoriety, have found but little food for fleir pens, those who wish to see the sport elevated in America to the same thorough salter to see the sport elevated in America to the same thorough salters are supported by the same thorough salters and the support of the same thorough salters are supported by the same thorough salters and the support of the same thorough salters are supported by the same thorough salters and the support of the same thorough salters are supported by the same thorough salters and the same thorough salters are supported by the same should limit his aspirations in the way of cruising, in constant communication with a boundard or respondents scattered all over the country, no one is a long and the salter of the same and cruising qualities of the interest of the same thorough country, and the should be saltered and the saltered and the saltered surface. For this reason alone, if for no other, we deen the year now closing as one having added a greater store of wholesome experience in the saltor's art than any of its predecessors. We will publish our

spared the vulgar newspaper sensations of former years and who judge the entire community by the two or three mecs given by the leading metropolitan club. Nor need there be any fear of the half dozen steam yachts built swamping the sailing interests altogether, as supposed in some quarters. The additions made to the steam feet are simply so many indications of the increasing wealth of the nation, and their construction always will go hand in hand with the spread of a love for the sea. It is erroneous to assume that none but addle-pated individuals, with time langing bear imposed their bands, can see any desight in curtising in steams of the steam that the spread of a love for the sea. It is erroneous to assume that none but addle-pated individuals, with time langing bear imposed in their bands, can see any desight in curtising in steam care to be applied in navigating under steam from port to port as there is in handing a vessel under sail. There is quite as much room for the acquisition of health and fanniherity with all the ways of mean and things salout on the bridge of a fine screw yacht as there is in the cockpit of the clipper schooner. There is the same nied tor study and experiment in the science of design and engineering on one hand that there is in the science of seign and engineering on the other. If about the science of modeling and sparring on the other. If about the science of modeling and sparring on the other. If about the science, and the whole of the sail and third the sail and the science of acquiring out and the whole of the sail on the transoms of a vessel under sail. But if you are a man unbitious of acquiring equal rank in point of knowledge with your professionals—if you propose, in short, to be captain of your own ship, there is as great, if not greater, opportunity with your hand at the bell than with your hand at the tiller. It is only the sensational writers of the press who will bowall the taste for yachting mode steam, because "they do not race," and their names and doings do not c spared the vulgar newspaper sensations of former years and who

### STEAM CATAMARANS.

POREST AND STREAM is a thoroughly practical journal. Practical because it combines the process of reasoning with an intimate knowledge of the mechanical operations and questions at later. There is a large class laboring under the delusion that the less they read, study, learn or think, the more "practical" they are. They refuse to accept any process of reason unless they stumble upon the same results while wielding their adae or bending a rivet. To this class belong the projectors of steam catanarans. Some time ago, when a deluded countryman was going to astonish the world with what he thought something new, we wrote as follows, Sept. 13, 1879:

they read, study, learn or timis, the more "practical" they are. They refuse to accept any process of reason unicos they stumble mont the same results while wielding their adze or heading a rivet. To this class belong the projectors of stem catanarams. Some the world with what he failed the method of the world with what he failed the method with what he failed the world with what he failed the world with what he failed the world with what he failed the world with what he failed the world with what he failed where the world with what he failed where the world with what he sailing catanaram sails faster than anything aleas aton, because the sailing catanaram sails faster than anything aleas aton, because the sailing catanaram sails faster than anything aleast on the sailing catanaram sails faster than anything aleas aton, because the sailing catanaram sails faster than anything aleast on the sailing that the world before, and that it was left to 'the theories of a Mr. ——, and the practical expenditual theory of the world when the possibilities hidden in the secrets of two inlike the acceptance of the world when were known, even in the town referred to, to have cuded in failure, were matters of minor consideration; for those experiments have been tried often enough, that many of them were known, even in the town referred to, to have cuded in calliest engineers of Europe, just lacked that little bit of extra genius which is depended upon to reverse the results of former years in favor of the two good citizens who have undertaken to startle the world afresh.

The same property of the wear of the world when the same catanaram, and any any to be led astray by designations have been fired at the thought of thirty miles an hour in a steam catanaram, and and that they are the sailt of the catanary with a minimum of resistance, which we have a sailer, altogether vanishes as a benefit as soon as we apply steam. Further, with a great and undhing more. If we now turn to the adjutance of the catanary with a proposed and much

be obtained from such a hull than any catamaran can ever afford, the hopes of high speed from this eight beat for sure to be ruth-lessly disappointed; but possibly the Commodore cares more for the deck room, and will be satisfied with as much speed as he can

the deck room, and will be satisfied with as much speed as he can get."
And again, July 22:
And again, July 22:
"At a second attent to launch this nondescript more butt straigs gave way, and she was again hauled out for require. It is crudent that some very questionable engineering talent has been brought into requisition in this new wonder, and should she ever actually be put into the passenger service we bespeak the most rigid inspection of hulls and machinery by the proper authorities. The latest reports are to the effect that she will steam 28 miles an hour. It is needless to say that such espectation is doomed to disappointment. If is needless to say that such espectation is doomed to disappointment. If she realizes 16 or 18, at an enormous waste of power, her visionary projectors will have cause to rejoice, and then she will only be a slow boat after all, wasteful in Ind., unhandy, and of daugerous, not to say untrustworthy, construction. We are atrial that in her the blacksmith has usurped the engineer, and that 'enterprise' has constituted itself a naval architect for the nonee,"

she will only be a slow boat after all, wasterul in Iucl, unhand, and of dangerons, not to say untrustworthy, construction. We are attraid that in her the blacksmith has ustriped the engineer, and that 'enterprise' has constituted itself a naval architect for the homes."

And in answer to a correspondent, Ang. 5:

"We never wavered on the steam catamaran question, but pronounced the expectation of high speed from such craft as visionary and not founded upon the sound principles of naval science. Now, to honest 'experiment' there can be no objection; it is the soul of progress; but we do pity the visionaries grasping at the ridiculous steam catamarans. We are once more borne out he no does the estimation of the control of progress; but we do pity the visionaries grasping at the ridiculous reteam catamarans. We are once more borne out he no does the estimation of the control of progress; but we do pity the visionaries grasping at the ridiculous decision of some bystander, who witnessed the abortive attempts to launch the affair as she lay on the ways. She made a trial trip, and then through the water at the dangerous speed of seven miles. Then half her blades were thrown aside, and the pitch increased from 8 to 12 feet—small difference. She started out once more, and report gives her ten miles—probably about eight in fact. There is some difference between this and thirty miles, but a recsonable margin was 200 per cent. Of course, everybody concerned is fully published that, with some slight changes, she will make thirty miles—they are 'quite confident'—and all the blame is to be put upon the propeller, if a windmil contriviance can legitimately be termed a propeller. There will be some more experimenting done with her, and very likely a few more miles made, and then the scrapheap of the Nyack cobble yard will be carricked by sundry tons of old iron. Sad to think of the twenty thousand dollars gone, and Fonesy and Strikam on an analogy. The sailing catamaran seriors oped from the prosecsion of excessively large st

an impossibility."
Finally, while discussing the question with a contemporary, Sept.

transportation and exemsion purposes, and then they must contine themselves to smooth water. As 'high speeds,' set them down as an impossibility."

Finally, while discussing the question with a contemporary, Sept. 10:

"The South Boston Inquirer has been discussing steam catamarans, and very plainly showed that the Ysack experiment was bound to be a failure with the first propeller used, as the number of revolutions multiplied by the pitch was only enough to produce 7 or 8 miles, and it very justly takes the projectors to task for the crude engineering. Or on men who have had a life-long experience with contractors' work, and the want of judgment displayed screes to show that purely practical men, without the least scientific atamments, are the most liable of all to bungle as soon as they leave well-beaten paths. But the Inquirer thinks that in spite of the long series of failures recorded, steam catamarans are capable of bligh speed. To this we cannot assent, for reasons already published in these columns. By using enormous power, and using it wastefully, double hulls may be propelled at a moderately high speed, but the same power and money expended upon a single hull would be a supplied of the supplied of thi

### THE AMERICAN CANOE ASSOCIATION.

EDITOR FOREST AND STREAM:

The nuedling of American canocists at Lake George during the mouth of August last has given an impetus to canocing all over the United States. Since the organization of the American Canoc Association the writer has received many communications from persons desiring to become members of the new brotherhood, which embraces all the different schools of canociests. It is now known that Rulgitts of the Paddle have been pursuing their pastime as solitary

crusiers, and without sympathy from their fellows in many localities, far removed from club organization, where a canocist and his canoc excite the mirth and sometimes the derison of "the wise." These solitary lovers of nature and the delights afforded by the cruising canoc now extend the right hand of fellowship to the American Canoc Association, and are eager to carry its flags on their little craft into whatever region they may penetrate in another season. They will now be recognized by the brotherhood as fellow cruisers, and will receive at the sympathy and support that a true canocial method of the state of the control of the state of the state of the control of the state of t

win or the indicated norse-power.

San Francisco Yautr Clue.—Mr. Bowie's new schooner is pronounced the "most wholesome" of any Turner has built. She has more depth than customary, but would be improved by more overhang aft which the length will prevent. The club is considering a change in the regatta course to obviate the "calm streak" at Osldand, where the high bluffs completly kill the wind. The harbor masters have granted the yachts a new anchorage in a snug bight and will build a breakwater, so that the club will be assured of a fine and safe anchorage in the future. Com. Harrison has summed up his log for the year, and thus that he has been absent cruising in the yaw! Frolic over 100 days.

AUGUST SCORES.

BECAUSE of the pressure of other work, the Secretary cannot give such comments upon the records made by members for the month of August, though some of the performances will merit special notice. The report has been long delayed in the vain hope that all the members would send reports. We trust that every member will appear in the report for September, when the Secretary will devote some attention to the more marked features

Saratoga Springs-N. Y., Oct. 24.—The following match at the York Round was shot Oct. 19, between Will H. Thompson, of Crawfordsville, Ind., and Frank H. Walworth, of Saratoga Springs, N. Y. Mr. Walworth being allowed to add to his score the excess of his 80-yard score over his 100-yard score. Mr. Thompson's score at 100 yards surpasses any we have seen made by any other archer in the country:

	100 yds.	so yds.	60 y.ds.	Total
Will H. Thompson		36-444	23-109	105-4
Frank H. Walworth	.26-98	36 - 162	20-S0	52-3
Add excess at 80 vds				. 4

Mr. Thompson won by 69 points.

-For close confinement, sedentary habits and brain and nervetire, trust in Hop Bitters.

WILLIAMSBURG ATHLETIC CLUE.—The annual fall games were contested Saturday, Oct. 23. The weather was rather unpropitions, it being bleak and very windy, which interfered with fast times that otherwise would, no doubt, have been made, as the track was in fine condition, owing to the efforts of Mr. Mc dasters, the club

In the 100-yard run H. M. Johnson, of the Lafavette A. C., was the winner in 10% sec. from 4 yards; A. C. Cooper, N. Y. A. C., second, from 5 yards.

The 220-yard run was won by Walter A. Smith, W. A. C., in 241%

The 220-yard run was won by water A panen, e. 2. 3, a. 2. 3, e. 2. 5, e. fron 17 yards; I. M. Wales second.

The 220-yard hurdle race was won by H. M. Stone, Pastime A. C., in 29% sec.; J. B. Hanna, S. A. A. C., second.

W. H. Parry, W. A. C., won the one-mile walk in 7 min, 18½ sec.;
G. H. Hanon, American A. C., second.

G. H., Hanon, American A. C., second.
The 660-yard run was won by G. J. Bradish in 1 min. 18½ sec.;
C. A White, S. I. A. C., second.
The most exciting event was the 1,000-yard run, special handicap.
L. E. Meyers, M. A. C., seratch, was the winner by about two inches from J. Saunders, W. A. C., 50 yards handicap. Meyers

was not up to his usual form, and had a struggle to win.

The final tug of war was won by the Union A. C., from the Orion R. & A. A. by 3 inches.

HARVARD VS. COLUMBIA.—The return of this inter-collegiate match was played at Hoboken, on Oct. 18, and resulted in the New Yorkers' defeat by one innings and twenty-seven runs.

### Answers to Correspondents.

18" No Notice taken of Anonymous Communications.

A. II., Painesville, Ohio.—The armory is at New Haven, but manufacture has been suspended. Will resume at an early date, and due notice will be given in our advertising columns.

D. P. S., Glen's Falls.—Your dog has a bad attack of mange. Avoid giving any meat, and feed upon cooling diet. The disease is contagious, and you should at once quarantine him. Give him, twice a day, five drops of Fowler's solution of arsenic in his food. Keep his kennel clean, and change his bedding constantly. Once a week give an aperient of Epsom salts, and a teaspoonful of sulphur and magnesia in food three times a week. Rub the parts afflicted twice a day with Glover's mange cure, and write results.

J.W. E., Pottstown, Pa.-Your dog is troubled with constipation. Feed boiled liver, twice a week or oftener. Give plenty of exercise, and at regular times, Costiveness is frequently the result of in-dianimation of the bowels or liver. In addition to usual food, give holled green vegetables. If the trouble has become chronic, give a pill of rhubarb and ipecacuanha—five grains or more of the former, with a half grain of the latter-at the time of feeding every day.

Massachusetts-Worcester, Oct. 23.-This week there has been somewhat of a let-up in sporting news in this vicinity. The local sportsmen have many of them had the pleasure of taking Mr. T. C. Banks Business Manager of the Forest and Stream, by the C. Danks, Business Manager of the Forest And Strikan, by the hand and renewing old acquisitance. During the week there have been two trials of skill in this vicinity. One of the local clubs had what they called "President's Day," Mr. C. B. Holden broke 38 out of 40 balls; Mr. George McAleer, 47 out of 50; A. L. Gilman, 44 in 46; and M. D. Gilman, 22 in 28 balls.

H. A. M., Hammond, N. Y.-1, My Gordon setter has a very small white stripe on her breast, and for that reason she is said to be of impure breed. 2. Does it necessarily follow that if a so-called Gordon setter has any white in its coat, it is of impure blood? Ans, 1, "Stonehenge" says: "It is admitted that the original Gordons were often black, tan and white; but as in all our shows the classes are limited to black-tan, the long arguments which have been adduced on that score are now obsolete. A little white on the chest and a white toe or two are not objected to, but a decided frill is considered by most judges to be a blemish," 2. Certainly not,

D. T. L., Yonkers.—My dog has been lame in one foreleg for some time, and now for a week past has been afflicted in the same way in all of his legs. When I take hold of his limbs to work the joints, he howls and whines piteously. Ans. Your dog has the rheumatism. Keep him warm and dry. Feed on plain food. Rub rheumatism. Keep him warm and dry. Feed on plain food. Rub the parts afflicted with a good stimulating liniment, such as is used for horses. Administer internally bi-carbonate of soda (baking for lorses. Administr internally obtained to solar dealing sodal dissolved in a little water, three times a day. As you neglect to state breed, ago or size of dog, we are unable to state exact quantity, but to a fifty-pound dog about one-half teaspoonful is the thing. You can gauge dose accordingly.

—One of the firm of John H. Pray, Sons & Co., wholevale and retail carpet dealers, Boston, Mass., is, or claims to be, a sportsman, and he will at all times take great pleasure in doing a favor for a fellow sportsman in want of any kind or grade of carpeting, rugs, etc., etc. Correspond with the house, or call and see him, and see if he means what he says, -Adv.

Many replies have been unaccidably crowded out, and have been sent by letter.

-For sinking spells, fits, dizziness, palpitation and low spirits, rely on Hop Bitters.

### PUBLISHER'S DEPARTMENT.

The Pleasures of Hope.—When the body is bowed down with pain an intense longing for relief brings hope. This may brighten the suffering, but it does not cure. At such a time as this, how welcome is such a friend as Warner's Safe Kidney and Liver Cure, bringing home health and happiness and the joys of a renewed life, -. 1dv.

BOX 3.994.

Special Announcement.

THE MANUFACTURERS OF THE "FOX" GUN, FEELING THAT PEALERS, as a general thing, have not done justice to the merits of this WONDERFUL GUN, are determined to have them placed before sportsmen more generally, that their great merits may become better known and appreciated. It is needless to specify of the ELEGANT WORKMANSHIP AND WONDERFUL SHOOTING POWERS of these guns. It is a fact well established that they are UNSURPASSED BY ANY IN THE WORLD.

We propose for a limited period to offer a line of these guns at the following EXTREMELY LOW PRICES, after which the original prices will be restored, our object being to introduce the guns into sections of the country where dealers have failed to present them; in the firm belief that where they become known they will be the established favorite, and we shall reap the benefit in future of this great sacrifice.

Such Inducements Have Never Reforc Reen Offered.

Such Inducements Have Never Before Been Offered. Sportsmen wishing to purchase one of these beautiful guns must respond at once, as the number offered at these prices is limited.

FORMER PRICE. \$40 Twist 73, 83, 100, 45. 78 & 60 125, 150, 200, Every Gun warranted. Sent C. O. D., with privilege of examination Send for
